Our Spirits of “A-mon” — Striving for Sustainable Growth Together with Society

Realizing a Sustainable Society through Sports

As global environmental changes and social challenges accelerate, sustainability has become a vital guiding principle for both organizations and individuals. The impact of these changes on human life and ecosystems is deeply concerning, and we believe this issue calls for responsibility as human beings, even before it becomes a matter of business management.

While our individual actions may seem small, we believe that collective efforts can create meaningful change. Mizuno is committed to doing what we can, and we aim to work hand in hand with diverse stakeholders to address these challenges.

Sports, in particular, have the power to transcend borders and generations, fostering communication and unlocking the potential of individuals and communities. During the COVID-19 pandemic, sports were at times deemed “non-essential,” but as the world recovered, I feel that the value of sports has increased even more than before. The return of spectators reminded us of the joy, inspiration, and hope that sports bring.

This power can be harnessed to build a more prosperous and sustainable society. For example, the Japanese national football team’s respectful behavior—cleaning locker rooms and picking up trash—was widely reported and praised around the world. These actions highlight the influence of sports and athletes in shaping public awareness and behavior.

At Mizuno, we encourage athletes to speak about environmental issues when they participate as speakers or instructors at lectures and clinics, believing that their words can inspire change. By leveraging the influence of sports and guided by our founding philosophy —“Contributing to society through the advancement of sporting goods and the promotion of sports”—we strive to be a company that inspires people to think “Let’s do what we can do together with Mizuno” through various initiatives, including raising environmental awareness.

Guided by Our Founding Philosophy

In response to today's rapid environmental changes and with the aim of expanding our business in the global market, in 2023, we established our Purpose, Vision, and Values to guide future growth.

This has not only allowed all employees to reaffirm our company's values, which we have upheld since our founding- We are persistent in bringing "A-mon" quality for the world.

"A-mon" quality means not only products, services and programs made with fairness, craftsmanship, innovation, and to inspire.

These principles now serve as the foundation for our daily decisions and actions.

"A-mon" is not limited to products. While providing high-quality sporting goods is our core responsibility, the spirit of "A-mon" extends to services, employee conduct, and partnerships. It represents our pursuit of excellence in all aspects of our business.

We have also embraced our founder's philosophy of "Justice above profit" as one of our core values—F for Fairness. This means always asking whether our actions are beneficial to society, rather than simply pursuing profit. This mindset will become increasingly important as we work toward a sustainable future.

The reason we have been able to continue our business for nearly 120 years is because of these values that have been passed down through generations. As we look ahead to the next century and beyond, we will remain committed to contributing to a more prosperous and sustainable society, guided by the principles we have upheld since our founding.

Expanding into New Fields with Integrity

One of Mizuno's defining characteristics that embodies our philosophy of "Justice above profit" is our commitment to supporting all sports even for sports with few participants. Regardless of the number of participants, we want to deliver "A-mon" quality to people. Rather than simply pursuing competitiveness and profit, we believe that this approach reflects our mission to support people through sports and ultimately enhances our corporate value.

In recent years, we are also applying our knowledge and technology cultivated in the sports field to other fields. These include work apparel and safety gear designed for comfort in varying conditions, solutions to cope with extreme heat, initiatives to promote physical activity for healthy aging, and improvements to physical education environments. We are building new business models rooted in sports.

Accelerating Innovation for a Sustainable Future

To develop new business and markets, we must foster a culture that promotes innovation and challenges the creation of new values.

Mizuno has introduced initiatives such as the "10% Rule," allowing employees to spend 10% of their working hours on personal projects, and an internal idea proposal system. These programs have generated over 800 ideas annually, encouraging proactive engagement.

Expanding in global markets requires a deep understanding of local cultures and needs. In the U.S., Europe, and Asia, we tailor our product and marketing mix that takes into account regional characteristics, while strengthening our commitment to sustainability.

To respond swiftly and flexibly to market changes and global demands, accelerating digital transformation (DX) is indispensable. We are advancing DX from multiple perspectives, including manufacturing, marketing, human resource development, and open innovation. In terms of product DX, in April 2025, we launched Centric PLM™, a system that seamlessly manages the entire product lifecycle. This enables efficient decision-making, transparent coordination with suppliers, and reduced environmental impact from design to disposal.

Our innovation center, MIZUNO ENGINE, established in 2022, continues to leverage our strengths in sports development and technology to create diverse solutions that maximize the potential of sports.

Sustainable growth with Sincerity and Conviction

Thanks to the support of our users and stakeholders, Mizuno has sustained its business for nearly 120 years. We are deeply grateful and remain committed to listening to society, accepting constructive feedback, and continuously evolving. Guided by our belief in “A-mon,” we will continue to pursue initiatives that contribute to a sustainable society with sincerity and conviction. We appreciate your continued support as we move forward together.

Akito Mizuno
President
Mizuno Corporation

Message from the CHO

Investing in Human Capital as a Growth Driver to Accelerate Business Strategy and Enhance Long-term Corporate Value

In 2023, Mizuno redefined its Purpose, Vision, and Values (PVV). Among these, the vision of “We are persistent in bringing ‘A-mon’ quality for the world” encompasses not only providing superior products and services to our customers as a manufacturer, but also broadly includes our human resources, corporate culture, and organizational climate. Although this concept is not new, one of the main reasons for this revision was to reconfirm it with all employees.

We position ESG management as the foundation of our sustainability strategy. In particular, we believe that the power of “people” is essential to sustainably grow our existing businesses while also pursuing new challenges. Employees are not a cost, but capital that creates the future. We treat our business strategy and human capital strategy as one, increasing investment in our people and enhancing education and training programs. By further developing the strengths of our talent and investing in areas that need improvement, we believe our human capital will become a long-term growth driver, leading to enhanced corporate value.

Our vision and specific initiatives also target talent employed by our overseas group companies. We are implementing various measures to connect people throughout the Mizuno Group and foster a “ONE Mizuno” culture. One such measure is improving employee engagement. It is important for this measure to involve two-way communication. It is often misunderstood that engagement means the company unilaterally provides something to employees. True engagement is achieved when the company creates a conducive work environment, implements education and training, and offers opportunities for employees to thrive, allowing each individual to work with a sense of fulfillment and growth. As a result, the organization can perform at its best, contributing to the company’s success.

The completion of our innovation center, “MIZUNO ENGINE”, in November 2022 has positively impacted our recruitment efforts. Hiring of development-related talent has become more active, and we are now attracting applicants from universities with which we previously had no connections. This has led to a broader and more diverse pool of candidates. We plan to further increase the number of research positions in the future.

Currently, we are hiring as many mid-career professionals as new graduates. Innovation cannot occur without diversity in backgrounds. For instance, gathering only people who played baseball in Japan would not yield ideas beyond that scope. We actively recruit individuals of various nationalities and those without a sports background, anticipating that their interactions will generate synergy effects.

Although our turnover rate is low, many former employees speak highly of Mizuno. Therefore, we are considering the establishment of a reemployment system. Regardless of the length of employment, I want Mizuno to be a company where everyone who has worked here can feel proud of their experience. To achieve this, we will further strengthen our investment in human capital and aim to create long-term corporate value.

Investing in human capital is not only about visible outcomes—it is the foundation for shaping the future of our company. As we pursue sustainable growth and value creation, we will continue to evolve by staying close to our people and growing together with them.

Message from the CTO

Creating Innovation through Manufacturing Strengths to Enhance Mizuno's Corporate Value by Making “A-mon” Products

At Mizuno, we are committed to enhancing our corporate value by creating “A-mon” products—those made with fairness, craftsmanship, and innovation—through innovation rooted in our manufacturing strengths.

Our strengths in manufacturing lie in our technological capabilities and uncompromising quality. When top athletes across various sports use our products, they can truly feel the difference. This difference is not merely about numerical specifications, but about the tangible quality that enhances performance—made possible by our advanced technologies.

For example, in footwear, we utilize proprietary technologies such as the core sole system “MIZUNO WAVE” and the high-resilience material “MIZUNO ENERGY”. In golf clubs, we incorporate materials like carbon and titanium. Mizuno's history has been one of continuously pursuing materials and designs to help customers realize their aspirations.

At the same time, some of our products have earned long-standing customer support by remaining unchanged. The “Morelia Series” football boots, known for their exceptional fit, continue to be loved by fans around the world. Similarly, the “Beyond Max” baseball bat has undergone model updates while preserving its core features. Delivering consistent quality has led to many loyal customers, which is one of our competitive advantages.

Another key strength is our in-house manufacturing capability. Our innovation center, “MIZUNO ENGINE”, located adjacent to our headquarters, provides a space for hands-on product development. With “MIZUNO ENGINE”, we have accelerated the cycle of “MEASURE”, “PROTOTYPE”, and “TRY.” Even at the mass production stage, our domestic factories can conduct small-scale prototyping—an ability unique to Mizuno.

Two and a half years since the launch of MIZUNO ENGINE, we have seen three major changes.

First, development is no longer limited to specific personnel—it now involves cross-departmental collaboration across different fields.

Second, open innovation has progressed, incorporating external insights and global technologies and materials.

Third, we are seeing changes in our employees' values, thinking, and behavior. These shifts have laid the foundation for Mizuno to continuously generate innovation.

The redefinition of our Purpose, Vision, and Values (PVV) in 2023 was a valuable opportunity for all employees to reaffirm our mission: "We are persistent in bringing 'A-mon' quality for the world."

Leveraging our manufacturing strengths, we are advancing research and development in five key areas defined by our R&D vision "MIZUNO MIRAI VISION": competitive sports, work, health, education, and the environment. Through these efforts, we aim to create truly "A-mon" products and enhance our corporate value.

I feel that everyone—from basic research to product development—is moving in the same direction toward this goal. We will continue to take on new challenges in manufacturing, driving innovation to transform society through sports.

* For details about PVV, please refer to [Purpose, Vision, and Values]

Message from the CFO

Bringing “A-mon” Quality to All Stakeholders through the Integration of “Principle” and “Profit”

Thanks to the support of our stakeholders, Mizuno achieved record-breaking revenue and profits across all business segments in the fiscal year ending March 2025. Guided by our corporate philosophy—“Contributing to society through the advancement of sporting goods and the promotion of sports”—we have continued to expand our operations across a diverse range of sports, including our founding sport of baseball, as well as soccer, volleyball, golf, running, swimming, and winter sports.

Even in areas with limited profitability, we prioritize social significance and the trust we build with our customers. This belief is at the heart of our business. At the same time, we recognize the importance of steadily improving profitability in these areas to meet the expectations of our shareholders.

Since our founding, we have valued “Justice above profit (principle over profit)” —a philosophy that continues to guide our actions. Building on this foundation, we aim to achieve sustainable growth by integrating principle, which represents our contribution to solving social issues through our unique technologies and services, and profit, which reflects our responsibility to deliver appropriate returns to shareholders. Through this integration, we strive to bring “A-mon” quality to all stakeholders.

Our expertise in the sports domain offers significant potential for balancing sustainability and profitability. For example, we are developing products that address climate risks such as extreme heat and heavy rainfall. In the workwear sector, we focus on comfort and safety in the workplace, contributing to improved working environments while achieving substantial financial growth. With a sales target of ¥20 billion by FY2027, we will continue to pursue stable expansion in this business.

We are also advancing initiatives in health and education. In education, we address the decline in children's physical activity by offering programs such as "Hexathlon" and "MISPO!", and supporting the transition of extracurricular sports activities to community-based models. In health, we provide value rooted in daily life through the development of exercise programs and products for older adults. These efforts not only carry social significance but also help us build broader customer touchpoints beyond sports, contributing to long-term customer lifetime value (LTV).

At our innovation center, "MIZUNO ENGINE", we are conducting research and development across five key themes: competitive sports, work, health, education, and the environment. These themes align with our materiality priorities. Going forward, we will further clarify the relationship between these research themes and our materiality, and integrate them with financial KPIs to enhance the consistency between our business strategy and sustainability efforts—ultimately shaping a more compelling value creation story.

In line with our founding spirit of Fair Play, we also conduct rigorous CSR audits to address human rights risks across our supply chain. From a financial perspective, these efforts to prevent risks from materializing are critically important, and we will continue to approach them with a heightened sense of responsibility.

Looking ahead, we will strengthen future-oriented investments, including enhancing e-commerce convenience in the Direct-to-Consumer (DTC) domain and expanding into growth markets such as India and South America. At the same time, we will strive for fair transactions with suppliers and distributors, improved treatment of employees, and returns to shareholders—ensuring appropriate capital allocation while building trust with all stakeholders.

As expectations for sustainability continue to rise, Mizuno remains committed to fulfilling its corporate responsibilities and growth strategies by integrating both "Principle" and "Profit". Together with all stakeholders, we will continue to build a sustainable future.

Mizuno's Purpose, Vision, and Values

Mizuno's Purpose, Vision, and Values

In response to today's rapidly changing environment and our ambition to expand our business globally, Mizuno places sustainability at the core of its management strategy. We are committed to preserving the values we have long held dear, while carrying them forward to the future and pursuing sustainable growth.

To bring this vision to life, in addition to our "Purpose", we established a new "Vision" and "Values" in November 2023 and shared them across the company. These principles were developed based on insights from our leadership team, while honoring the traditions we have upheld since our founding.

During this process, the management team—including the President—engaged in in-depth discussions to reinterpret the founder's values in a way that aligns with the modern business landscape, thereby creating a unified global code of conduct. Going forward, we will implement our business activities in line with these values across all regions, with the aim of embedding and spreading them deeply throughout our global operations.

Purpose

Contributing to society through the advancement of sporting goods and the promotion of sports.

Vision

We are persistent in bringing "A-mon" quality for the world.
"A-mon" quality = Made with fairness, craftsmanship, innovation, and to inspire.

Values

- Fair Play
We play fair game, principle over profit, no matter what.
- Friendship
We play as a team, respect and inspire each other, even opponents.
- Fighting Spirit
We play to Challenge, push boundaries, never give up.

Sustainability Basic Policy

The Mizuno Group promotes sustainability activities based on ISO 26000, a guideline on social responsibility, and based on “Sustainability Basic Philosophy” and “Action Principles for SDGs.” We aim to be a company that is trusted and needed by all stakeholders by actively working to realize a sustainable society and to preserve a beautiful global environment.

Sustainability Basic Philosophy

To help people lead a more affluent and comfortable life, we at the Mizuno Group will promote our business activities in good faith, by:

- Providing better sporting equipment, places and opportunities for playing sports to all, regardless of nation or race;
- Conducting business activities in a transparent and fair way, adhering to laws and regulations and respecting social norms in all countries and regions; and
- Proactively addressing labor and human-rights issues and global environmental problems towards the realization of a sustainable society.

Action Principles for SDGs

- Mizuno will contribute to social, economic and environmental sustainability, as well as the fulfillment of our relevant activities, in accordance to the United Nations' appointed SDGs.
- Our contribution to social, economic and environmental sustainability will be the driving force and impelling cause to enrich and enhance both Mizuno's brand values and overall corporate status.
- We will plan and create new businesses, by solving social and environmental issues, through innovation utilizing our business assets.

[SDGs Initiatives](#)

Mizuno Corporation Ethical Standards

In order to fulfill social responsibility, it is important to implement thorough measures for legal compliance and corporate ethics in all business activities of each employee. Aiming at enterprise which is necessary and reliable by all stakeholders, we determine Mizuno Corporation Ethical Standards as our behavioral guidelines.

Mizuno Corporation Ethical Standards

1. Contribution to society
 1. Realizing our management concept of “Contributing to society through the advancement of sporting goods and the promotion of sports.”
 2. Making a positive contribution to the development of our economy, society, environment, sports and culture, thus adding to the development of international society, as well as meeting the requirements of our stockholders through creating revenue.
2. Compliance
 1. Confirming that the company creates revenue by complying with social standards and ethics and observing all applicable laws and international regulations.
 2. Ensuring actions by our corporation and its employees are consistent with the standard provided for by applicable laws. The company shall never be the cause of behavior contrary to social standards.
3. Providing quality products and services
 1. Endeavoring to supply products and services that add value for our customers.
 2. Unceasingly striving to ensure the utmost safety of our products.
4. Preservation of the natural environment
 1. Strive to develop and provide environmentally-conscious products/services.
 2. Conduct business activities with global environmental protection in mind and strive for energy and resource conservation as well as pollution prevention, and waste product reduction.
 3. Establish and maintain an environment management system, and strive for its continual improvement.

5. Sensitive information
 1. Thoroughly manage confidential information to prevent leaks, and do not illegally obtain confidential information of other companies.
 2. The rules and regulations for any and all information received must be abided by and safe handling must be maintained as well as improved, whether it be private or work related personal information, images, written work etc.
 3. Not engaging in insider trading.
6. Intellectual property
 1. Implementing thorough measures for protecting intellectual property created by the company.
 2. Respecting all third party intellectual property and not infringing on the intellectual property rights of others.
7. Consideration of stakeholders
 1. Promoting cooperation with stakeholders and endeavoring to actively endorse a positive dialogue with them.
 2. Disclosing our corporate information to stakeholders in an appropriate and timely manner.
 3. Endeavoring to maintain close contact with, and contribute to, our local community.
8. Responding to organizations endangering society
 1. Not allowing organizations endangering society to profit from the company's activities.
 2. Never accepting unfair demands from organizations endangering society.
9. Working conditions and workplace environment
 1. Complying with laws and regulations concerning labor including working conditions.
 2. Endeavoring to maintain and improve a safe and sanitary working environment.
 3. Requiring our suppliers to comply with labor laws and regulations and to provide a safe and sanitary working environment.
10. Respecting human rights
 1. Respect the human rights and diversity of all people.
 2. Not partaking in any discriminative activities, sexual harassment, persecution or mistreatment.
 3. Not employing forced or child labor.
 4. Guaranteeing the laborer's right to join a labor union and the right to negotiate with management.
 5. Ensuring equal opportunity for employment.
 6. Ensuring that employees who reports wrongful acts or breach of laws or regulations will not suffer any disadvantage.
11. Gifts and entertainment
 1. Not giving unlawful gifts or offering questionable entertainment.
 2. Not giving any gifts or offering entertainment which deviates from normal social practices or general business standards.
12. Promoting fair competition
 1. Not making unreasonable or inappropriate requirements to our vendors and customers.
 2. Complying with fair trade, fair competition and anti-monopoly laws and regulations.
 3. Accurately displaying quality, content and other information for our products and services.
13. Enhancing corporate culture
 1. Endeavoring to foster a corporate culture which values fair play, amity and friendly competition and to not permit any unfair acts.
 2. Thoroughly employing a personnel system based on merit and establish a vigorous organization by fair evaluation and the appropriate placement of human resources.
 3. Complying with this Mizuno Corporation Code of Conduct, ceaselessly promoting reformation and improvement and endeavoring to enhance our business structure by undertaking stringent self-regulation and internal assistance efforts.

Signs the United Nations Global Compact

Mizuno signed the United Nations Global Compact in July 2021. Mizuno supports the Ten principles in the four areas of human rights, labour, the environment, and anti-corruption, advocated by the United Nations Global Compact, and will put them into practice in light of its existing regulations.

[Link: the United Nations Global Compact](#)

Sustainability Operations Structure

Sustainability Operations Structure

At Mizuno Group, we have strengthened our sustainability management structure to enhance corporate value from a sustainability perspective. The President (CEO) holds ultimate responsibility for management decisions related to sustainability issues. Matters encompassing sustainability are discussed in the Sustainability Operations Council (internal name: MIZUNO CREW21 Council), chaired by the Executive Officer in charge of Human Resources and General Affairs, with the Executive Officer in charge of Product Development serving as the Vice-Chair. (Meetings are generally held four times a year.)

The Council plays a central role in our Group's management of social responsibility and global sustainability. This includes the identification and discussion of policies, the formulation of specific initiatives and execution plans, goal setting, and progress monitoring. Important issues identified and discussed by the Sustainability Operations Council are presented to the Board of Directors and are rolled out to all divisions and business sites of the Group after a resolution by the Board of Directors. Sustainability reports are reviewed and approved by the Sustainability Operations Council and are reported to the Board of Directors. The identification of ESG impacts and risk opportunities is also reported to the Board of Directors via the Sustainability Operations Council. The Board of Directors supervises the progress of sustainability activities based on these reports.

Among the seven key issues (materiality) identified in relation to social responsibility and sustainability, environmental issues—especially those involving multiple departments—are addressed by the CREW21 Environment Committee, which operates under the Council. In addition, the Risk Management Committee and the Cross-departmental Products Committee have been established. These committees also meet regularly to formulate action plans, set targets, and manage progress, and they report or submit their results to the Board of Directors as needed.

For the review of the risk management process related to ESG, deliberations are conducted by the Risk Management Committee, and the review results are reported to the Board of Directors via the Sustainability Operations Council.

In fiscal year 2023, in addition to our “Purpose,” we established a new “Vision” and “Values.” These were proposed by the Sustainability Operations Council and formally approved by the Board of Directors in October 2023, following multiple rounds of deliberation. Since November, we have been implementing these policies as a unified global guideline, providing a strong foundation for all employees to work together in building a more valuable future.

■ FY 2024 Key Themes in Sustainability Management

Key sustainability management themes are deliberated and reported by the respective departments and committees responsible for implementation. The main initiatives deliberated and reported in fiscal 2024 are shown in the chart below.

Key Themes	Main Initiatives	Responsible department/committee
Management Policy	- Formulation of sustainability strategy - Redefinition of materiality	Board of Directors Sustainability Operations Council Global Human Resources and General Affairs Department CREW21 Environment Committee
Climate Change	- Climate change initiatives - Formulation of BCP (Business Continuity Plan) - Calculation of greenhouse gas emissions	Sustainability Operations Council Risk Management Committee CREW21 Environment Committee Legal Office Respective Product Divisions
Business and Human Rights	- CSR risk management system transformation project - Response to human rights due diligence legislation in Europe and the U.S.	Sustainability Operations Council Cross-departmental Products Committee Legal Office Respective Product Divisions
Human Capital	- Disclosure of human capital information - Implementation of employee engagement survey - Development of talent development strategy - Promotion of diversity	Board of Directors Sustainability Operations Council Global Human Resources and General Affairs Department

■ Sustainability Operations Council (Internal name: MIZUNO CREW21 Council)

The Sustainability Operations Council has been established to integrate Mizuno Group's efforts towards social responsibility, encompassing economic, societal, and environmental aspects, with our management strategy. This Council is chaired by the Executive Officer responsible for Human Resources and General Affairs and comprises members from a wide range of roles, including the Executive Officer for Product Development, the Executive Officer for Strategic Planning, the Executive Officer for Finance and Legal Affairs, as well as other members closely related to sustainability such as the head of Legal Affairs and the head of Quality Assurance. Notably, neither non-voting employees nor external stakeholders have been appointed to the council.

Sustainability Operations Council Structure

The Sustainability Operations Council leads discussions on Mizuno's sustainability strategy, formulates action plans, and sets targets for specific initiatives. Critical matters are presented to the Board of Directors and, upon approval, are rolled out across all divisions and business sites of the Group. The Council also serves as a higher-level body, reviewing reports on key issues discussed by its subcommittees, such as the CREW21 Environment committee.

■ **CREW21 Environment Committee**

Based on the recognition that all of our corporate activities have an impact on the environment, we launched the “CREW21* Project”, aimed at contributing to the global environment and its conservation, in September 1991. We established the CREW21 Environment Committee, which discusses important policies, measures, and issues related to environmental conservation activities in the Mizuno Group. As of 2025, more than 30 years have passed since its inception.

The committee consists of the Executive Officers in charge of Human Resources and General Affairs and of Product Development, along with general managers from key departments including product planning, development, logistics, legal affairs, facilities, quality assurance, manufacturing, and others. Discussions include the formulation and revision of environmental policies, the setting of short-, medium-, and long-term environmental goals, and the development of specific measures to achieve them. The committee does not include members without speaking rights or external stakeholders.

The CREW21 Environment Committee meets every two months (six times per year). With a focus on reducing environmental impact—such as greenhouse gas emissions—and providing environmentally conscious products and services, it serves as a cross-functional forum for company-wide communication on the direction and planning of eco-friendly and climate-conscious product development.

In addition, to promote environmental initiatives across the entire Group, we have established an Environmental Management System (EMS) led by the Executive Officer in charge of Legal Affairs. Progress updates are regularly reported to the CREW21 Environment Committee, ensuring ongoing information sharing and alignment on environmental actions.

* CREW21 stands for Conservation of Resources and Environmental Wave21.

■ **Risk Management Committee**

The Risk Management Committee is an advisory body to the Board of Directors, established in accordance with the Risk Management Regulations. It is chaired by the President (CEO), with three Vice Chairpersons consisting of one Senior Managing Executive Officer (Director) and two Executive Officers. The committee is composed of five General Managers from departments responsible for internal control. The committee does not include employees without speaking rights or external stakeholders.

Risk Management Committee Structure

The Risk Management Committee oversees risk management across all Mizuno Group operations, including each division of Mizuno Corporation and its subsidiaries. It plays a central role in identifying a wide range of risks—such as natural disasters, human-caused incidents, data breaches, product accidents, and internal misconduct—and in formulating preventive and recurrence mitigation measures, as well as establishing and executing Business Continuity Plans (BCPs).

Regarding climate change risks, the committee has been actively discussing relevant short-, medium-, and long-term aspects since FY2021. In fiscal year 2024, BCP plans and initiative case studies were shared across departments and group companies, leading to active discussions. These efforts have helped strengthen the Mizuno Group's overall risk responsiveness and support more sustainable business operations.

In addition, through ongoing communication with relevant departments and sites, as well as training and education initiatives, the committee promotes a deeper understanding of risk management throughout the Group. When specific business risks arise, the Risk Management Committee takes the lead in establishing a crisis response headquarters to address the issue promptly and implement measures to prevent recurrence.

■ Cross-departmental Products Committee

Mizuno has established the Cross-departmental Products Committee, chaired by the Senior Managing Executive Officer. The committee brings together representatives from key product departments—such as research and development, apparel, footwear, and equipment—for regular meetings. Its activities are focused on realizing a sustainable future through discussions on R&D perspectives, strategic direction, and concrete planning.

Recognizing the impact of our manufacturing activities on factory workers and local communities, Mizuno has promoted CSR procurement since 2004. These initiatives aim to ensure appropriate standards in human rights, occupational health and safety, and environmental protection at our suppliers, in line with international norms.

Following the organizational restructuring on June 22, 2022, discussions on promoting compliance with the Mizuno CSR Procurement Code of Conduct and implementing CSR procurement audits have been conducted within the Cross-departmental Products Committee. Topics related to CSR procurement are discussed, in principle, four times per year. The committee does not include members without speaking rights or external stakeholders.

In fiscal year 2024, the committee received and discussed a progress report on a CSR risk management system transformation project, launched to address emerging legislation on human rights and environmental due diligence in Europe and the United States, as well as to build a more resilient supply chain. It was also approved that the project would continue into FY2025.

Stakeholder Engagement

Stakeholder Engagement

To contribute to the realization of a sustainable society and the conservation of a beautiful global environment while valuing “Fair Play,” “Friendship,” and “Fighting Spirit,” it is essential to cooperate with various stakeholders. We believe that it is important to listen sincerely to the requests, expectations, opinions, and evaluations of stakeholders, learn from them, and incorporate their feedback into our business activities.

Main stakeholders

* Issues are selected and addressed based on their relationship with business and their importance.

Stakeholders	Major communication opportunities	Specific examples of actions
Common	Website	Preparation and publication of a Sustainability Report (once a year)
Customers	Mizuno Call Center Social media	Providing active support in which we contact silent customers to respond to their indirect complaints posted on our website
Employees	Gathering between management and employees Labor-management consultation	- Continuing to provide opportunities for direct communication between the President / executives and employees - Conducting a global engagement survey for employees. The data collected through the survey will be thoroughly analyzed, including tracking progress, and reported to the management team
Supplier	Capacity building (once a year) On-site audit / Individual dialogue	- CSR Procurement Seminar as Capacity-Building Initiative: As part of our capacity-building efforts, Mizuno invited suppliers of its domestic subsidiaries to the headquarters to provide briefings on the company's approach to human rights issues and the CSR procurement management system. Additionally, we explained our internal regulations on CSR procurement and human rights initiatives to the sustainability officer of our U.S. subsidiary. - On-site Audits (Domestic): Mizuno's CSR staff conducted on-site CSR audits at factories located in Mie, Ehime, Okayama, and Kumamoto prefectures that employ foreign technical intern trainees, acting as auditors to assess compliance with our CSR standards. - Post-Audit Dialogue with Factories: For any non-compliance issues identified during the audits, we engaged in follow-up dialogue with the audited factories, typically within three months, to closely monitor the progress and status of corrective actions. - Pre-engagement Dialogue: Before Starting Transactions Prior to initiating business with new suppliers, Mizuno held individual CSR procurement briefings to explain our policies and audit procedures, ensuring alignment with our responsible sourcing principles.
Business partners	Team Sales Meeting/ Product Showcase Meeting	In addition to the sales department, we engaged with product planning personnel to incorporate different viewpoints.
Local communities	Factory briefing session (risk communication) (once a year)	Mizuno Technics Corporation holds regular dialogue sessions on environmental conservation activities in its factories, inviting administrative officials and people from neighborhood associations in the areas where its factories are located.
	Tour of the Innovation Center “MIZUNO ENGINE”	Facility tours were conducted for business partners, students from related educational institutions, and international guests.
Shareholders / Investors	General Meeting of Shareholders	Early dispatch of the notice of convocation of the General Meeting of Shareholders, preparation of an English version of the notice of convocation, and disclosure of them on the websites of the company and stock exchanges.

Co-creation with Stakeholders

Relationship with Local Communities

Sports activities in local communities not only promote physical and mental health but also help in building community ties among residents. By combining the expertise of public and private sectors, we can engage in effective activities that meet local needs. Our company promotes sports in local areas through collaboration with local governments and regional universities.

Additionally, having venues where sports can be enjoyed is essential to creating opportunities for sports participation. Since 2006, our company has been involved in the designated management of sports facilities across the country, and as of March 2025, we operate 175 locations and 1,267 facilities nationwide. Through the management of these facilities and the provision of exercise programs tailored to different age groups, we facilitate interactions among community members and support the creation of opportunities for residents to easily engage with sports as part of their daily lives.

Provision of Exercise Programs

Support Community Building among Local Residents

Osaka Prefecture: Supply Chain CO₂ Emissions Visualization Model Project

In preparation for Expo 2025 Osaka, Kansai, Osaka Prefecture is implementing the “Supply Chain CO₂ Emissions Visualization Model Project”, aimed at accelerating the visualization of CO₂ emissions across entire supply chains. This initiative is commissioned to Boston Consulting Group, Inc., and based on a comprehensive assessment of industry and product applicability, Mizuno was selected as a participating company for fiscal year 2023.

As part of this project, Mizuno calculated and reported CO₂ emissions with a focus on the carbon footprint (CFP) of its apparel and equipment product categories. Since 2018, Mizuno has been proactively assessing CFP, particularly in its footwear segment. To further advance CFP calculation across a broader product portfolio, it became increasingly important to establish a methodology that balances accuracy with operational efficiency.

As a company headquartered in Osaka, Mizuno remains committed to collaborating with Osaka Prefecture to promote sustainable business practices moving forward.

■ Communication with supplier

To promote CSR procurement activities—including the protection of human rights and occupational health and safety for workers at contracted factories, as well as the advancement of environmental conservation efforts at those sites—we actively engage in communication with suppliers and local staff involved in production.

During audits, we assess the current conditions of suppliers through employee interviews and on-site visual inspections. Based on these findings, we provide feedback during the closing meeting of each audit, identifying any non-conformities with our requirements and offering guidance to support necessary corrective actions.

Closing Session of the Audit

■ Collaboration and Communication with Local Communities

Participation in the “Tread Lightly” Recycling Program through Industry Collaboration

Mizuno Australia is participating in the “Tread Lightly” recycling program in collaboration with the Australian Sporting Goods Association (ASGA) and other sporting goods brands.

This initiative collects unwanted and used shoes—regardless of brand or manufacturer—and recycles them by processing the materials into granules. These recycled materials are then reused in applications such as gym mats, retail flooring, and playground surfaces, contributing to waste reduction and a lower environmental footprint.

To date, the Tread Lightly program has collected more than 100,000 pairs of shoes, equivalent to approximately 32 tons. In fiscal year 2024 alone, Mizuno collected 765 pairs, amounting to around 510 kilograms.

Mizuno remains committed to reducing environmental impact and contributing to a more sustainable society by continuing to collaborate with a wide range of stakeholders.

■ Collaboration with labor unions – “Global Framework Agreement”

In November 2023, Mizuno held a regular information exchange meeting at the Mizuno Technics Yoro Factory with IndustoriALL, UA Zensen and the Mizuno Union, both signatories to the Global Framework Agreement which was signed in 2011 to promote cooperation in protecting the human rights of workers at contracted factories and improving their working conditions.

During the meeting, Mizuno reported on its CSR procurement initiatives and key issues addressed during fiscal year 2023. UA Zensen, in turn, shared updates and concerns from the labor union perspective.

Report Summary of the Regular Information Exchange Meeting

Mizuno	UA Zensen
CSR Procurement Initiatives - Report on Engagement with a Factory Located Near the Thailand–Myanmar Border - Progress on the Development of a New CSR Procurement Management System - Summary of CSR Audit Results over the Past Three Years and Current Status of FY2024 Audits - Outstanding Issues - Delayed Response to Legislative Developments in Europe and North America Regulating Products of Forced Labor - Negative Impact on Production Activities in Myanmar	Labor Union Interests and Activities - Joint development with the ILO of a program to implement a code of practice on occupational safety and health in the textile, garment, leather, and footwear sectors - Design and implementation of grievance mechanisms for worker remediation - Conclusion of legally binding agreements between IndustriALL and global brands - Conclusion of a collective bargaining agreement (CBA) between a Cambodian affiliate union and an employers' organization

* On October 1, 2020, we updated the content of the Global Framework Agreement signed with IndustriALL Global Union (I-ALL) in 2011.

Participation in External Organizations Related to Sustainability

Organization Name	Details
Public-Private Partnership Platform for Local Development SDGs	The Cabinet Office has established a platform with the aim of promoting the domestic implementation of the SDGs and further fostering regional revitalization. Seeing this platform as an opportunity for public-private collaboration, we think we could deepen partnerships with a wide range of stakeholders and are actively participating.
Kansai SDGs Platform	A platform where various actors from the Kansai region participate, including private enterprises, civil society, NPOs, NGOs, universities and research institutions, as well as local and government agencies. As a company in the Kansai region, we are participating to seek collaboration.
Support for UNICEF's Children's Rights in Sport Principles	We resonate with the principles of 'Children's Rights in Sport Principles,' which were announced in 2018 by UNICEF (United Nations Children's Fund) and the Japan Committee for UNICEF, a public interest incorporated foundation. We are participating as a supporting company.
Sport for Tomorrow Consortium	While considering international trends that utilize the power of sports to progress towards a sustainable and harmonious society, they are promoting initiatives in various areas, such as the popularization and promotion of sports and addressing social issues through sports. We resonate with this purpose and are actively participating.
Japan Platform for Migrant Workers towards Responsible and Inclusive Society (JP-MIRAI)	A platform that undertakes initiatives for the protection of rights of foreign workers and improvement of their living and working conditions. Through subcommittee activities, it facilitates discussions and research, and promotes awareness through seminars and forums. We are participating with the aim of deepening collaboration with member organizations.

Integrated Value Creation Stories

By 2030, the Mizuno Group will simultaneously create social and economic value by clarifying purpose of businesses that will lead to the resolution of sustainability in environmental and social issues, based on the three frameworks, which are 1)"Heritage & Beyond" as the strengths of Mizuno, 2)"Sports & Beyond," as Mizuno's business field and 3)"Responsibility & Beyond" as the social value provided by Mizuno.

Mizuno's Social Value: Responsibility & Beyond [Materiality]

Evolving from CSR that responds to stakeholder expectations to proactively contributing to sustainability and the SDGs through new business development that goes beyond those expectations.

Responsibility: Corporate activities with responsibility associated with business

- Responsible procurement with due respect for human rights
- Human Capital Management
- Responsibility for global environmental issues throughout the product lifecycle
- Responsible business practices
- Responsibility for Safe and High-Quality Products

Beyond: Providing social value through business

- Contributing to the multi-dimensional values of sports
- Contributing to the resolution of social issue

Strengths of Mizuno: Heritage & Beyond

Taking advantage of the strengths we have cultivated since our establishment, we are taking on the challenge of a new strategic domain.

Heritage: Business assets that should be continuously cultivated in all businesses

- Trust as a sports brand
- Network related to sports
- Development capabilities selected by top athletes
- Human resources with a sports mindset
- Technological capabilities to achieve high quality

Beyond: New strategic domains leveraging strengths and new strengths to be cultivated in the future

- Lifestyles
- Facility management services
- Health
- Business to Business
- Work Business
- Emergence of innovation (new R & D base)

Mizuno's Business Field: Sports & Beyond

Expansion of business domains based on sports as the core base.

Sports

- For Sports Athletes Business targeting people who play sports
- For Sports Community Business targeting people who support sports

Beyond Sports

- Business that supports comfortable lifestyles
- Business targeting the health of middle-aged and elderly people, the development of children, and support for people with disabilities
- Business targeting work safety and efficiency
- Business that contributes to the SDGs, making use of Mizuno's technology and expertise

Materiality Identification Process

Materiality Identification Process

Since 2015, Mizuno has identified its Materiality from a CSR perspective and has been actively engaged in business activities based on defined goals. In response to changes in the natural and social environments surrounding the company, we have been regularly reviewing and updating our Materiality to further advance sustainability management. Most recently, a review was conducted in fiscal year 2024.

Approach to the Identification Process

Background of the 2024 Review

In fiscal year 2023, we established our Purpose, Vision, and Values. To clarify our sustainability strategy based on these principles, we conducted a renewed review of our Materiality in fiscal year 2024.

As part of this process, we carried out individual interviews with representatives from relevant departments, and conducted an assessment of the impacts on the environment and society, as well as on our own corporate value.

Prioritization of Issues

At this stage, we have determined that our Materiality should encompass both “Strengthening the Foundation and Fulfilling Social Responsibility” and “Value Creation Leveraging Our Strengths.”

As a result, while maintaining the current seven core pillars as major Materiality categories, we have updated the key focus areas (mid-level items). Going forward, we plan to work in collaboration with relevant departments to establish KPIs.

Identified Materiality

Identified Materiality and Key Focus Areas

Responsibility: Corporate activities with responsibility associated with business

Responsible procurement with due respect for human rights

- Supply Chain Management
- Respect for Humanity

Human Capital Management

- Promoting and respecting diversity (Mizuno DEI)
- Talent Development and Capability Building

Responsibility for global environmental issues throughout the product lifecycle

- Climate Change Initiatives
- Product Development for Reduced Environmental Impact

Responsible business practices

- Strengthening Corporate Governance
- Compliance / Anti-corruption

Responsibility for Safe and High-Quality Products

- Ensuring of the safety and quality of products
- Communication related to products

Beyond: Providing social value through business

Contributing to the multi-dimensional values of sports

- Physical and mental health through sports
- Embodying Mizuno's Unique Identity and Integrated Strength

Contributing to the resolution of social issue

- Promotion of Sports and Education
- Contributing to sustainability through the application of Mizuno's technologies

Identified Materiality

Key Performance Indicators (KPIs)

To properly manage the progress of our materiality and promote disclosure in our annual reports, we have established key performance indicators (KPIs) for our major initiatives.

List of “Identified Materiality”

Materiality	Materiality (priority issues)	Risks	Opportunities	Key Performance Indicators (KPIs)			
				KPIs	Actual results for FY2024	Target for FY2025	Mid-term target
Contributing to the multi-dimensional values of sports	- Physical and mental health through sports - Embodying Mizuno's Unique Identity and Integrated Strength	- Decrease in the population of sports competitors - Stagnation of the domestic sports market	Providing the value of sports' power by leveraging understanding, know-how, technology, and network related to sports	Total number of users of products and services that contribute to maintaining and enhancing health (cumulative number)	34.11million people	34.00million people	–
				Sales area of long-pile artificial turf in sports facilities	200,000 square meters	230,000 square meters	260,000 square meters
Contributing to the resolution of social issue	- Promotion of Sports and Education - Contributing to sustainability through the application of Mizuno's technologies	- Decrease in the population of sports competitors - Stagnation of the domestic sports market	- Development, deployment, and promotion of unique exercise programs - Fostering diverse community communication through the use of sports facilities - Expanding opportunities for physical activity in daily life due to changes in work styles	Domestic Sales Revenue of the Work Business	13.82 billion yen	–	FY2027: 20 billion yen
Responsible procurement with due respect for human rights	- Supply Chain Management - Respect for Humanity	Human rights and labor safety risks due to procurement from new overseas suppliers	- Realization of high-quality and stable procurement and expansion of competitiveness by implementing pre-evaluation of new suppliers - Expansion of sales opportunities for products and services that respond to ethical consumption	Correction rate of critical and major non-conformance items	As of March 31, 2025, 80% of the issues identified in audits conducted in the first half of fiscal year 2024 had been corrected.	Target as of the end of September 2025: Correction rate for audits conducted in the second half of fiscal year 2024: 65% Target as of the end of March 2026: Correction rate for audits conducted in the first half of fiscal year 2025: 65%	–
Human Capital Management	- Promoting and respecting diversity - Talent Development and Capability Building	- Decline in the labor population - Change on business environment brought about by technological innovation.	- Providing opportunities for active participation - Diverse ways of working and diverse values	- Ratio of Female Managers - Ratio of Mid-Career Hires in Management Positions	10.7% 15.7%	–	FY2025: 10% FY2025: 20%

Materiality	Materiality (priority issues)	Risks	Opportunities	Key Performance Indicators (KPIs)			
				KPIs	Actual results for FY2024	Target for FY2025	Mid-term target
Responsibility for global environmental issues throughout the product lifecycle	- Climate Change Initiatives - Product Development for Reduced Environmental Impact	- Physical damage to business locations, stores, and administrative facilities due to climate change - Suspension of operations by suppliers and delays in raw material procurement due to climate change - Increased compliance costs due to tightened environmental regulations - Increased costs associated with the adoption of renewable energy - Reduction in outdoor sports due to rising temperatures and increased risk of heatstroke - Increased disposal costs due to increased waste emissions - Risks of harmful chemical leaks	- Cost reduction through energy conservation, the introduction of renewable energy, waste reduction, and the promotion of recycling - Sales growth through the development and marketing of environmentally friendly and climate-resilient products - Enhancement of brand value and customer acquisition through communication with local communities and customers by promoting the recycling of products and packaging materials	Apparel: environmentally friendly products	30%	36%	2028: 100% (in all categories of new products)
				Footwear: Environmentally friendly products	61.5%	97.2%	2027: Maintain 100% (All categories of new products)
				Reduction of material waste during the manufacturing process, reduction of energy consumption during production, and simplification/reduction of auxiliary materials.	26.3%	29.1%	2030 Target: 58.1% reduction (compared to 2018)
Responsible business practices	- Strengthening Corporate Governance - Compliance / Anti-corruption	- Compliance violations such as corruption and bribery - Infringement of third-party intellectual property rights - Expansion of cybercrime and cybersecurity incidents	Creation of sustainable corporate value through building trust with stakeholders	Improvement in Employee Awareness of the Internal Reporting Hotline(*d)	① Mizuno Fair Play Hotline awareness among Mizuno employees: 98.2% ② Harassment Hotline awareness: 98.2% (survey respondent: 567) people	① Mizuno Fair Play Hotline awareness among Mizuno employees: 100% ② Harassment Hotline awareness: 100%	–
Responsibility for Safe and High-Quality Products	- Ensuring of the safety and quality of products - Communication related to products	- Diversification of products handled and complexity of the supply chain due to entry into new markets - Compliance with global strengthening of chemical substance regulations	- Rapid product introduction and expansion of sales opportunities through the construction of a more flexible quality assurance system - Production and sales of safe products in accordance with the laws of various countries - Development of human resources through the creation of opportunities to acquire quality knowledge tailored to diverse working arrangements	Quality Objectives (Defect Rate Related to Claim Returns)	Target Achievement Rate ① Global Footwear Product Division: 130% ② Global Apparel Product Division: 132% ③ Global Equipment Product Division: 82%	Target Achievement Rate 100%	–

* Note on the Target Seasons for Performance and Goals of Environmentally Friendly Products

Apparel:

FY2024 Performance: Based on 2024 SS/AW season products

FY2025 Target: Set based on 2025 SS/AW season products

Footwear:

FY2024 Performance: Based on 2025 SS/AW season products

FY2025 Target: Set based on 2026 SS/AW season products

46 issues applicable to Mizuno

When identifying priority issues (materiality) in 2015, we selected the following 46 issues. These issues were considered as applicable to us and were organized under six pillars at that time in reference to ISO 26000, the SDGs, the GRI G4 Guidelines, and other international standards deemed important as well as various reports from NGOs and research agencies.

In fiscal year 2018, we reviewed the materiality based on these 46 issues. When reviewing the materiality, we sorted out social issues deeply related to our company and our past achievements. After much discussion on our strengths, business domains, and social value provided by us with management and employees of related divisions according to the proposals of outside experts, we selected new materiality from the 46 issues.

Promotion of sports	CSR procurement	Environment
1. Improvement of the physical strength and athletic ability of children 2. Health promotion of the elderly through sports 3. Promotion of local sports through cooperation with schools and local communities 4. Support for promotion of sports for the disabled 5. Support for promotion of amateur sports 6. Training of sports instructors 7. Support for promotion of sports in developing countries	1. Environmental impacts of Tier 1 suppliers 2. Treatment of workers at Tier 1 suppliers 3. Other risks at Tier 1 suppliers 4. Prohibition and elimination of child labor 5. Environmental impacts of Tier 2 and Tier 3 suppliers 6. Treatment of workers at Tier 2 and Tier 3 suppliers 7. Understanding of other risks at Tier 2 and Tier 3 suppliers 8. Supplier capacity building 9. Disclosure of information on CSR efforts and ensuring of transparency of the information in the supply chain 10. Freedom of association and collective bargaining rights in the supply chain 11. Establishment of a complaint-handling mechanism in the supply chain 12. Disclosure of supplier information related to products	1. Reduction of greenhouse gas emissions 2. Reduction and proper control / disposal of waste 3. Reduction and proper control of chemicals hazardous to humans and the environment 4. Reduction of energy consumption 5. Increase in efficiency of water consumption and water consumption management 6. Research and development aimed at reducing the environmental impacts of products 7. Disclosure of information on the environmental impacts of products 8. Environmental considerations when holding sporting events 9. Collection and recycling of Mizuno's used products
Fairness in business practices	Product liability	Employment and human resource utilization
1. Enhancement of governance 2. Practice of compliance 3. Enhancement of internal control 4. Anti-corruption 5. Prevention of anti-competitive behavior 6. Protection of intellectual property 7. Protection of personal information	1. Product quality control 2. Provision of information on safe product use to consumers 3. Ensuring of the appropriateness of advertising materials 4. Ensuring of the appropriateness of product labeling 5. Responses to inquiries from consumers 6. Sincere responses regarding defective products	1. Fair evaluation system 2. Safety and health in workplaces 3. Realization of diverse working styles 4. Diversity 5. Wages and welfare of employees

Contributing to the multi-dimensional values of sports

Key Focus Areas

- Physical and mental health through sports
- Embodying Mizuno's Unique Identity and Integrated Strength

Reason for importance

The values that sports can offer are diverse, playing a crucial role in helping people lead richer, healthier, and more comfortable lives. Mizuno believes it's essential to deliver the joy of sports to as many people as possible, allowing them to experience the spirit embodied in sports through "fair play," "friendship," and "fighting spirit." Additionally, we believe it's important to cooperate with relevant institutions to provide solutions that leverage the potential of sports to address the challenges faced by society.

Related to the SDGs

Mizuno's Risks and Opportunities

The decrease in the population of sports competitors due to the decline in the domestic population, and the stagnation of the domestic sports market, are recognized as risks by Mizuno.

Utilizing our group's understanding, know-how, technology, and network related to sports, Mizuno aims to maximize the power of sports, delivering its value to more people around the world, and will continue to aim for global business expansion.

Risks

- Decrease in the population of sports competitors
- Stagnation of the domestic sports market

Opportunities

- Providing the value of sports' power by leveraging understanding, know-how, technology, and network related to sports

Key Performance Indicators (KPIs), Targets, and Results

KPI	FY2024 Target	FY2024 Result	FY2025 Target	Department in charge
• Total number of users of products and services that contribute to maintaining and enhancing health(cumulative number)	35.00 million people	34.11 million people	34.00 million people	Sports Facilities Department
• Sales area of long-pile artificial turf in sports facilities	200,000 square meters	230,000 square meters	260,000 square meters	Sports Facilities Department

Approach to priority Issues

With the aim of promoting sports and increasing the number of people involved in sports, we will provide “opportunities,” “venues,” and “services” to respond not only to “participating in sports” but also to “watching sports” and “supporting sports.” In doing so, we will create “joy, excitement, and dreams” that contribute to the revitalization of the community.

Main Initiatives

For initiatives related to “Contributing to the multi-dimensional values of sports”, please refer to the following links:

[Physical and mental health through sports](#)

[Embodying Mizuno’s Unique Identity and Integrated Strength](#)

Moving Forward

We will continue to research and develop products and services that allow diverse individuals to enjoy sports and exercise together, transcending differences in age, gender, or any physical differences.

Contributing to the resolution of social issue

Key Focus Areas

- Promotion of Sports and Education
- Contributing to sustainability through the application of Mizuno's technologies

Reason for importance

Mizuno is expanding its business not only in competitive sports products but also in everyday life and work business, catering to various scenes. Leveraging the strengths cultivated in the sports field, we are committed to contributing to the resolution of social issues and the healthy development of local communities. This includes enhancing physical and mental well-being and fostering diverse communication within the community.

Related to the SDGs

Mizuno's Risks and Opportunities

With the advancement of the information society and the automation of various tasks, convenience has been enhanced, and changes in work styles have made comfortable living possible. Mizuno is expanding the definition of sports beyond competitive scenes to include physical activities in everyday life. We view this as an opportunity to create new businesses that solve social issues through the power of sports and will actively pursue this approach.

Risks

- Diversification of hobbies and preferences due to the advancement of the information society
- Reduction of safe and accessible outdoor play areas

Opportunities

- Development, deployment, and promotion of unique exercise programs
- Fostering diverse community communication through the use of sports facilities
- Expanding opportunities for physical activity in daily life due to changes in work styles

Key Performance Indicators (KPIs), Targets, and Results

KPI	FY2024 Result	2027 Target	Department in charge
• Domestic Sales Revenue of the Work Business	13.82 billion yen	20.0 billion yen	Work Business Department

Approach to priority Issues

Mizuno group is focusing on improving children's physical and athletic abilities and extending the healthy lifespan of seniors. For the enhancement of children's physical and athletic abilities, it is crucial to get them accustomed to physical movement from early childhood. In an aging society like today, there are hopes for extending healthy lifespans through sports. We will deploy our original programs developed by our group as community revitalization programs aimed at increasing the number of children who love to exercise and active seniors.

Main Initiatives

For initiatives related to “Contributing to the resolution of social issue”, please refer to the following links:

[Promotion of Sports and Education](#)

[Contributing to sustainability through the application of Mizuno's technologies](#)

Moving Forward

We are applying the technology and materials developed in the field of competitive sports. With that foundation, we aim to create a society where everyone enjoys moving their bodies and to realize a world where the power of sports can solve social issues.

Responsible procurement with due respect for human rights

Key Focus Areas

- Supply Chain Management
- Respect for Humanity

Reason for importance

The Asia-Pacific region, where many of Mizuno's subcontracted factories are located, is generally considered a region of high concern in terms of human rights, labor conditions, and environmental issues.

At Mizuno, we believe that "good manufacturing" means not only delivering safe, high-quality, and reliable products, but also ensuring that production processes align with international standards for human rights, labor practices, and environmental responsibility. Based on this belief, we actively promote CSR procurement.

In particular, we recognize that respect for human rights is becoming increasingly important as we expand our business globally. Accordingly, we have identified "responsible procurement with respect for human rights" as one of our key Materiality themes and are working to address it.

In response to developments such as the EU's proposed regulation banning products made with forced labor, the U.S. Uyghur Forced Labor Prevention Act, and Section 307 of the U.S. Tariff Act, we acknowledge the growing importance of identifying and managing human rights risks—even beyond our direct suppliers. This includes monitoring Tier 2 and Tier 3 suppliers who provide raw materials and components to our Tier 1 suppliers.

At Mizuno, we strive to identify potential human rights violations such as forced labor or discrimination through pre-assessments (pre-audits) conducted before entering business relationships, and through periodic audits of existing suppliers. At the same time, we recognize that audits alone are not sufficient to uncover all potential risks in the supply chain. Therefore, we view the implementation of an effective grievance mechanism as a critical tool to complement audits and address latent issues.

Related to the SDGs

Mizuno's Risks and Opportunities

With further globalization of the supply chain, increased procurement from new overseas suppliers can also lead to risks related to human rights and labor safety. At Mizuno, by continuously ensuring the pre-evaluation of new suppliers, we aim to realize high-quality and stable procurement, expand our competitiveness, and increase sales opportunities for products and services that cater to ethical consumption.

■ Risks

- Human rights and labor safety risks due to procurement from new overseas suppliers

■ Opportunities

- Realization of high-quality and stable procurement and expansion of competitiveness by implementing pre-evaluation of new suppliers
- Expansion of sales opportunities for products and services that respond to ethical consumption

Key Performance Indicators (KPIs), Targets, and Results

KPI	FY2024 Target	FY2024 Result	FY2025 Target	Department in charge
Correction rate of critical and major non-conformance items	Over 65% (semi-annually)	As of March 31, 2025, 80% of the issues identified in audits conducted in the first half of fiscal year 2024 had been corrected.	Target as of the end of September 2025: Correction rate for audits conducted in the second half of fiscal year 2024: 65% Target as of the end of March 2026: Correction rate for audits conducted in the first half of fiscal year 2025: 65%	Legal Affairs Office

Approach to priority Issues

The Asia-Pacific region, where many of Mizuno's contract factories are located, is generally considered a region with major concerns in terms of human rights, labor, and environmental aspects. Mizuno has established the “Mizuno CSR Procurement Code of Conduct”, which incorporates perspectives from ISO26000, an international guidance on social responsibility, and we convey our thoughts to our suppliers while also demanding their adherence to these principles.

Main Initiatives

For initiatives related to “Responsible procurement with due respect for human rights”, please refer to the following.

[Respect for Human Rights \(Policies and Governance Structure\)](#)

[Supply Chain Management](#)

Moving Forward

Suppliers manufacturing products for multiple brands are burdened with individual audits demanded by each brand, each requiring different points of compliance. There have been calls from these suppliers for improvements to mitigate these duplications of CSR audits. In response, industry associations and other initiatives have begun efforts to share information. Mizuno will continue to address issues such as mitigating duplication of CSR audits.

Human Capital Management

Key Focus Areas

- Promoting and respecting diversity (Mizuno DEI)
- Talent Development and Capability Building

Reason for importance

To continue delivering Mizuno's signature "A-mon" quality to the world, innovation is essential. To achieve this, we promote human capital management as a means to deliver unparalleled value to our stakeholders.

At Mizuno, we do not view employees merely as "human resources," but rather as "human capital" — core drivers of value creation. Based on this perspective, we aim to build borderless relationships with all stakeholders, while focusing on the autonomy and growth of each individual employee.

Moreover, beyond individual growth, organizational engagement is especially important. We believe that by fostering strong engagement across the entire organization, we can cultivate an inclusive and empowered culture. To this end, we implement a range of initiatives that energize the organization and ensure that every employee finds fulfillment and contributes to value creation.

Related to the SDGs

Mizuno's Risks and Opportunities

Due to a decrease in the working population, securing excellent talent has become increasingly challenging year by year. In particular, the acquisition of professionals with expertise in fields such as AI and data science faces intense competition in the labor market. Technological innovations for business efficiency and automation have made remarkable progress, and without appropriate investment in talent can lead to decreased productivity and risks of declining performance and competitiveness. By adopting a diverse range of talent with various values and preparing an outstanding environment that enables diverse ways of working and job satisfaction, we will create innovations.

Risks

- Decline in the labor population
- Change on business environment brought about by technological innovation

Opportunities

- Providing opportunities for active participation
- Diverse ways of working and diverse values

Key Performance Indicators (KPIs), Targets, and Results

KPI	FY2024 Result	FY2025 Target	Department in charge
• Ratio of Female Managers	10.7%	10%	Global Human Resources & General Affairs Department
• Ratio of Mid-Career Hires in Management Positions	15.7%	20%	Global Human Resources & General Affairs Department

Approach to priority Issues

By appropriately investing in and managing human capital, we generate irreplaceable value, leading to enhanced corporate value and increased profitability. This creates a virtuous cycle in business management and drives sustainable growth.

We are advancing three key initiatives to support individual autonomy and growth:

1. Investment in talent: We respect human connections and strive to create an environment where each employee can achieve self-realization.
2. Support for individual autonomy: We provide programs that encourage self-determination and independence, enabling employees to build their own career paths.
3. Maximizing individual growth and potential: We make the most of each employee’s unique strengths and capabilities by offering ongoing education, learning opportunities, and meaningful challenges in the workplace.

Additionally, as part of our organizational development efforts, we conduct [employee engagement](#) surveys across the entire Mizuno Group globally.

Main Initiatives

For initiatives related to “Human Capital Management”, please refer to the following links:

- [Labor practices](#)
- [Talent Development and Capability Building](#)
- [Promoting and respecting diversity](#)
- [Health Promotion Initiatives](#)
- [Occupational safety and health](#)

Moving Forward

In the current age of rapid and unpredictable changes, often referred to as VUCA, it has become increasingly difficult to anticipate the future, making it challenging to differentiate our products and services. In such an environment, the role played by “people” has become increasingly crucial for Mizuno to demonstrate competitive advantage.

We will continue to create operations with high productivity, and solid culture that can contribute to the improvement of corporate value and social capital in the future. For the company to undergo corporate transformation the growth of each individual employee is indispensable. We will further enhance the environment where all employees can fully utilize their abilities and contribute to the future sustainable growth of the company.

Responsibility for global environmental issues throughout the product lifecycle

Key Focus Areas

- Climate Change Initiatives
- Product Development for Reduced Environmental Impact

Reason for importance

The global environment is facing a range of challenges, including global warming and pollution caused by waste. There is growing concern about the impact of climate change on economic activities, as well as the effects of increasing natural disasters on business operations and supplier production. To ensure a future where people around the world can enjoy sports safely and vibrantly, Mizuno believes it is essential to reduce the environmental burden from its business activities, such as greenhouse gas (GHG) emissions. The company is also committed to developing and providing environmentally conscious products and services.

Related to the SDGs

Mizuno's Risks and Opportunities

At Mizuno, we have designated climate change, waste, and chemical substances as key environmental issues, and are conducting risk and opportunity analyses for each. In response to growing societal interest in natural capital, including biodiversity, we are working to promote greater understanding within the company. We are also establishing a reporting framework to disclose the impact of our initiatives on business operations, strategy, and financial performance.

Risks

- Physical damage to business locations, stores, and administrative facilities due to climate change
- Suspension of operations by suppliers and delays in raw material procurement due to climate change
- Increased compliance costs due to tightened environmental regulations
- Increased costs associated with the adoption of renewable energy
- Reduction in outdoor sports due to rising temperatures and increased risk of heatstroke
- Increased disposal costs due to increased waste emissions
- Risks of harmful chemical leaks

Opportunities

- Cost reduction through initiatives such as energy conservation, adoption of renewable energy, waste reduction, and promotion of recycling
- Sales growth through the development and sales of environmentally friendly and climate-resilient products
- Enhancement of brand value and customer acquisition through communication with local communities and customers, promoted by recycling of products and packaging materials

Mizuno's Long-term Environmental Target

To accelerate its efforts aimed at reducing climate change, in August 2020, Mizuno reexamined its long-term environmental target and decided to achieve net zero by 2050. At the same time, in addition to its existing Scope 1 and 2 emissions reduction targets for 2030, Mizuno set a Scope 3 emissions reduction target and announced it in May 2021.

2050
Aiming to achieve net zero

2030 (Greenhouse Gas Emissions Reduction compared to 2018)
Scope 1 & 2: 50.4% reduction
Scope 3: 58.1% reduction (Categories 1 & 12 per billion yen of added value)

Key Performance Indicators (KPIs), Targets, and Results

KPI	Mid-term Goals	FY2024 Target	FY2024 Result	FY2025 Target	Department in charge
• Apparel: environmentally friendly products	2028: 100% (in all categories of new products)	30%	36%	40%	Global Apparel Product Department
• Footwear: environmentally friendly products	2027: 100% (in all categories of new products)	61.5%	97.2%	100%	Global Footwear Product Department
• Equipment: Reduction of material loss in the manufacturing process, reduction of energy consumption during production, and reduction and simplification of secondary materials	2030 Target: 58.1% reduction (compared to 2018)	Reduction of material waste during the manufacturing process, reduction of energy consumption during production, and simplification/reduction of auxiliary materials.	26.3%	29.1%	Global Equipment Product Department

* Note on the Target Seasons for Performance and Goals of Environmentally Friendly Products
Apparel:

Footwear:
FY2024 Performance: Based on 2025 SS/AW season products
FY2025 Target: Set based on 2026 SS/AW season products

[Initiatives for CO₂ Emissions Reduction and KPIs](#)

Approach to priority Issues

In Mizuno's entire business activities, indirect emissions known as Scope 3 account for approximately 97% of greenhouse gas emissions. Specifically, “purchased products and services” make up about 80% of the total, making the reduction of greenhouse gas emissions through products essential. We will continue to promote product planning and development aimed at reducing greenhouse gas emissions.

Main Initiatives

For initiatives related to “Responsibility for global environmental issues throughout the product lifecycle,” please refer to the following links:

[Policies and Governance Structure](#)

[Environmental Management System](#)

[Mitigation of Environmental Impact in Products](#)

[Climate Change](#)

[Water Use and Management](#)

[Reduction of hazardous chemical substances](#)

[Reduction of waste](#)

[Business activities and environmental burden](#)

Moving Forward

Towards achieving net zero by 2050, we will continue to advance initiatives such as innovating manufacturing processes and utilizing renewable energy. In addition, we will accelerate environmentally conscious efforts, such as promoting recycling, reducing waste, and using water efficiently.

Responsible business practices

Key Focus Areas

- Strengthening Corporate Governance
- Compliance / Anti-corruption

Reason for importance

Mizuno believes it has a responsibility to fulfill its social obligations as a corporation by complying with all applicable laws and international regulations, and by maintaining strong relationships with stakeholders such as local communities, customers, and suppliers. We are committed to continuing our efforts to promote responsible business practices.

Related to the SDGs

Mizuno's Risks and Opportunities

Should there be compliance violations by employees, such as corruption and bribery, or infringements by suppliers, it can lead to severe damage to the company's reputation and have significant negative impacts on the business activities. Furthermore, we recognize the infringement of third-party intellectual property rights, the expansion of cybercrime, and cybersecurity incidents as risks that could potentially threaten the continuity of our business. We are committed to responsible business practices as we strive to create sustainable corporate value through building trust with our stakeholders.

Risks

- Compliance violations such as corruption and bribery
- Infringement of third-party intellectual property rights
- Expansion of cybercrime and cybersecurity incidents

Opportunities

- Creation of sustainable corporate value through building trust with stakeholders

Key Performance Indicators (KPIs), Targets, and Results

KPI	FY2024 Target	FY2024 Result	FY2025 Target	Department in charge
• Improvement in Employee Awareness of the Internal Reporting Hotline(*d)	①Mizuno Fair Play Hotline awareness among Mizuno employees: 100% ②Harassment Hotline awareness: 100%	①Mizuno Fair Play Hotline awareness among Mizuno employees: 98.2% ②Harassment Hotline awareness: 98.2% (survey respondents:567 people)	①Mizuno Fair Play Hotline awareness among Mizuno employees: 100% ②Harassment Hotline awareness: 100%	Internal Audit Office

Approach to priority Issues

Mizuno adheres to laws, social norms, ethics, and internal regulations in its business activities, and takes action to prevent violations of compliance by implementing initiatives under the themes of “Compliance/Anti-corruption,” “Protection of Intellectual Property,” and “Protection of Personal Information.”

Main Initiatives

For initiatives related to “Responsible Business Practices”, please refer to the following links:

[Corporate Governance](#)

[Compliance / Anti-corruption](#)

[Protection of Intellectual Property](#)

[Protection of Personal Information](#)

Moving Forward

In response to the expansion of business areas globally, there is a need to strengthen governance in themes such as compliance, intellectual property, and personal information protection. Therefore, we will implement measures (such as employee education, internal organizational changes, and system reviews) tailored to the current challenges faced by the organization.

Responsibility for Safe and High-Quality Products

Key Focus Areas

- Ensuring of the safety and quality of products
- Communication related to products

Reason for importance

“Create best products for customers.” Having cherished these words of the founder Rihachi Mizuno, we believe that it is important to manufacture and sell safe and superior products. Defects in product safety and quality may damage the trust of customers. We will endeavor to offer better products by providing information that helps customers to use our products properly and safely and by continuing efforts to use the feedback of our customers to improve our products.

Related to the SDGs

Mizuno's Risks and Opportunities

In response to the diversification of products handled and the complexity of the supply chain due to entry into new markets, we are considering building a more flexible quality assurance system. Additionally, to address the global trend of stricter chemical substance regulations, we are advancing the construction of a global quality assurance system in collaboration with our overseas group companies. To provide safe and high-quality products, we will set up opportunities for quality knowledge education that correspond to various working arrangements.

Risks

- Diversification of products handled and complexity of the supply chain due to entry into new markets
- Compliance with global strengthening of chemical substance regulations

Opportunities

- Rapid product introduction and expansion of sales opportunities through the construction of a more flexible quality assurance system
- Production and sales of safe products in accordance with the laws of various countries
- Development of human resources through the creation of opportunities to acquire quality knowledge tailored to diverse working arrangements

Key Performance Indicators (KPIs), Targets, and Results

KPI	FY2024 Target	FY2024 Result	FY2025 Target	Department in charge
• Quality Objectives (Defect Rate Related to Claim Returns*)	100%	Achievement rate ①Global Footwear Product Division: 130% ②Global Apparel Product Division: 132% ③Global Equipment Product Division: 82%	Achievement rate 100%	Quality Assurance Office

* Calculated by dividing the number of defective returns for which manufacturing is responsible by the number of items shipped, and compared with the target values set by each division.

Approach to priority Issues

We conduct various reviews and inspections to ensure product safety and quality control. Through reviews, we check various items related to product quality, including product design, materials to be used, safety during use, and labeling. In design reviews before the start of manufacturing of new products, we check their structure and materials as well as technical aspects based on the checklist. After products are manufactured, we conduct a pre-shipment inspection before they are shipped from a factory to make a final check for defects in individual products.

Main Initiative

For initiatives related to “Responsibility for Safe and High-Quality Products,” please refer to the following links:

[Product Safety and Quality \(Policies and Governance Structure\)](#)

[Ensuring of the safety and quality of products](#)

[Communication related to products](#)

[Engagement with Customers](#)

Moving Forward

We will continue to work to provide safe and high-quality products through the improvement of our quality assurance system from a global perspective and the development of human resources.

Policies and Governance Structure

Management policy

Sports not only help maintain physical and mental health, but also possess the tremendous power to foster communication beyond borders and generations, and to unleash the potential in individuals and communities. Based on its Corporate philosophy of “contributing to society through the advancement of sporting goods and the promotion of sports”, Mizuno is committed to providing access to sports for more people and contributing to a richer, sustainable society where everyone can shine.

Mizuno’s efforts in “promoting sports” involve delivering the joy of sports to as many people as possible, enabling them to experience the inherent spirit of sports, encapsulated in the values of “fair play,” “friendship,” and “fighting spirit.” Moreover, the company seeks to cooperate with relevant organizations to provide solutions that leverage the potential of sports to address societal challenges.

Mizuno has redefined the word “sports” in its Action Principles for SDGs, established in 2020, and in section “1. Contribution to society” of its Mizuno Corporation Ethical Standards. This new definition encompasses not only competitive sports but also everyday physical activities. Guided by this broader understanding of sports, Mizuno aims to develop business models that utilize the power of sports to resolve social issues and contribute to achieving the UN’s SDGs.

[“Action Principles for SDGs” “Mizuno Corporation Ethical Standards”](#)

Management Framework

Mizuno has established the Sustainability Operations Council (internal name: MIZUNO CREW21 Council), chaired by the Executive Officer in charge of Human Resources and General Affairs. The main directions of key global sustainability activities are discussed in this committee, and the details of those activities are shared with relevant parties.

[Sustainability Operations Council \(internal name: MIZUNO CREW21 Council\)](#)

Additionally, we have established the Cross-departmental Products Committee, chaired by the Senior Managing Executive Officer. This committee convenes representatives from various product departments, including research and development, apparel, footwear, and equipment, for regular meetings. We engage in activities directed towards realizing a sustainable future, discussing perspectives on R&D, future directions, and concrete plan formulation.

[Cross-departmental Products Committee](#)

Materiality

Physical and mental health through sports

Basic Concepts

The living environment surrounding us is changing rapidly every day. Advances in the information society and the automation of various tasks have improved convenience, and changes in working styles have contributed to a more comfortable and efficient lifestyle.

However, these developments have also led to new challenges, such as reduced physical activity and a decline in human interaction, which raise concerns about their potential impact on the healthy development of society.

Mizuno aims to help build a society where more people can enjoy sports and nurture both physical and mental well-being. By providing accessible services that encourage everyday physical activity, we support healthy, fulfilling lifestyles and contribute to the creation of a more sustainable society.

Proposal of programs that support corporate health management

We support corporate health management by proposing events and seminars that utilize various approaches tailored to working adults who are too busy to find time for exercise, as well as to those who may lack interest in physical activity.

One such initiative is the “Nagara Exercise 100” program, designed to help alleviate lack of exercise by transforming everyday movements and moments into simple physical activities. We have implemented this program in the form of events and workshops at over 100 companies to date.

People often struggle to maintain an exercise routine because they feel constrained by the need to dedicate specific time or visit particular places, or because they perceive exercise as something special or difficult. “Nagara Exercise 100” was born from the idea that we don’t need to do anything extraordinary—many opportunities for physical activity are actually hidden within our daily routines.

No special equipment is needed, no gym membership is required, and there’s no need to set aside extra time solely for exercise. The program is introduced in a format where participants perform “nagara” (while-doing) exercises together with an instructor in typical daily-life settings.

With just a small shift in awareness, daily life itself can become a form of exercise. The “Nagara Exercise” initiative has also been carried out in collaboration with various companies and organizations.

Collaboration with companies

[Nagara Exercise](#)

Health promotion in daily life

Walking Program

Mizuno offers walking program workshops designed to make learning proper walking techniques and posture enjoyable, while aiming to improve exercise efficiency. Participants gain objective insights into their walking posture and standing alignment, helping them discover tips for moving their bodies more effectively.

Walking is a fundamental activity for both physical and mental well-being. Through these workshops, we support the enhancement of individual well-being and the realization of a more sustainable lifestyle.

■ “Motion DNA” : A Scientific Approach to Walking

Mizuno has developed the “Motion DNA” walking ability and walking type analysis system as part of its services to embody the POWERED LIFE vision, “Bringing good performance to your life.” By utilizing “Motion DNA,” Mizuno aims to make people’s “walking” more enjoyable, thereby supporting a life where they can “go wherever they want on their own feet, forever.”

“Walking” is a fundamental aspect of life. Therefore, when walking ability declines, it leads to a decrease in the Quality of Life (QOL). There is a correlation between walking speed and healthy life expectancy; it has been found that individuals with a faster walking pace tend to have a longer healthy lifespan, while those with a slower pace have a shorter one.

To lead a more vibrant and longer life, effective measures to maintain walking ability are essential. “Motion DNA” measures walking ability using simple and highly accurate specialized equipment, and estimates walking type through a standing posture measurement system and application. By understanding the differences in walking ability and walking type, individuals can identify training methods and support products suited to them, contributing to the extension of their healthy lifespan.

Walking Ability Measurement

Motion DNA Measurement Results

	FY2022	FY2023	FY2024
Number of Facilities (Locations)	63	81	71
Number of Participants (People)	3,500	6,600	9,250

■ Supporting Healthy Habits with Simple In-Home Exercise

Responding to feedback such as “I want to stay active, but I don’t have time” and “Storing fitness equipment is a hassle,” Mizuno launched the Mizuno Healthy Interior series in 2018—a line of compact training items designed to fit seamlessly into living spaces.

Based on the concept of “Adding wellness to your everyday time and space,” the series supports the development of healthy habits through simple exercises that can be done in the living room, making it easier for those with limited time due to work, household duties, or childcare to stay active.

With more people spending time at home due to the COVID-19 pandemic, demand for this series has remained strong, as it enables individuals to continue exercising easily and independently, regardless of external conditions.

Mizuno Healthy Interior

Extending Healthy Life Expectancy by Maintaining Physical Function

In today's aging society, extending healthy life expectancy—the period during which people can live without limitations to daily activities due to health issues—through sports is increasingly anticipated.

Mizuno is committed to helping seniors maintain their physical function through sports, contributing to the extension of healthy life expectancy. This not only supports individuals in preserving their quality of life and leading fulfilling lives, but also helps reduce the broader social burden of healthcare costs.

Mizuno Senior Fitness Program

The Mizuno Senior Fitness Program is an original exercise program developed by Mizuno for older adults, based on three key concepts: Doable, Enjoyable, and Sustainable.

LaLaLa Fit

"LaLaLa Fit" is an exercise program that uses your own body weight to train muscles, joints, and other parts of the body essential for everyday movement. By incorporating Mizuno's functional training tools, the program helps improve balance and aims to activate muscles that are not typically used in daily life.

LaLaLa Circuit

"LaLaLa Circuit" is a fitness program that allows participants to train both the body and mind at their own pace, with support from a trainer. It focuses on three key elements—balance, strength, and cognitive function—and is tailored to each individual's fitness level. This program is ideal for those looking to engage in a more intensive workout. It combines strength training using hydraulic machines with rhythmic aerobic exercises, creating a dual-task workout that stimulates both the body and the brain.

LaLaLa Circuit Lite

"LaLaLa Circuit Lite" is a fitness program designed for those who want to enjoy exercise in a fun and accessible way. It features a dual-task workout that combines bodyweight strength training with rhythmic aerobic exercises, aiming not only to improve physical fitness but also to stimulate brain activity.

Collaboration with Local Communities

Mizuno actively participates in community-based initiatives across Japan, such as long-term care prevention programs and health guidance services for individuals at risk of lifestyle-related diseases. These efforts aim to provide opportunities for physical activity—especially for those who may find it difficult or intimidating to visit formal fitness facilities.

In these programs, group activities and interactive sessions are incorporated to encourage community building among participants and to support ongoing physical activity at designated community facilities.

In fiscal year 2024, Mizuno plans to conduct 40 long-term care prevention programs nationwide. These programs are designed not only to engage participants during the sessions but also to help them acquire exercise methods and routines they can continue independently after the program ends.

Promoting the spread of Mizuno Active Leaders

Mizuno offers training programs for anyone involved in senior fitness instruction, aimed at developing Mizuno Active Leaders—licensed individuals who acquire basic knowledge of the body and learn how to lead and implement exercise programs effectively.

This is Mizuno's original certification program, through which participants learn key safety considerations for conducting physical activity and gain the skills needed to guide seniors in strength training and stretching exercises.

Individuals from NPOs, sports associations, and companies have obtained the Active Leader license and are expanding their roles by leading fitness programs in local facilities and communities.

Program Results

Name of Session	Program Details	Unit	FY2020	FY2021	FY2022	FY2023	FY2024
Walking Program	This is a walking workshop designed to be an easy and accessible form of exercise that individuals can do on their own. It covers proper posture, walking techniques, rehabilitation exercises, and toe stretches, making it suitable even for seniors who may not be comfortable with more strenuous activities. * Some facilities offer classes that combine both LaLaLa Fit and LaLaLa Circuit Lite. Therefore, the results for LaLaLa Circuit Lite are included under LaLaLa Fit.

Walking Program

LaLaLa Circuit

Training Long-Term Care Prevention Leaders in Collaboration with Local Governments

Mizuno, in collaboration with local governments, conducts training programs to develop long-term care prevention leaders for local residents. Incorporating elements of the Mizuno Active Leader program, we provide training sessions, on-the-job training (OJT) at core facilities, and continued support to help trained leaders thrive in their own communities.

In a joint initiative with the city of Habikino, we trained 106 local health promotion supporters across four locations in the city, contributing to community-led health and wellness efforts.

In fiscal year 2024, a total of 2,816 community-based health classes were held across the four sites, with 12,590 participants taking part—driven by resident leadership.

Research on Exercise Programs to Enhance or Maintain Cognitive Function in Seniors

Among older adults, two major health concerns are the risk of becoming bedridden due to falls and the decline in cognitive function that interferes with daily life. Extended periods of immobility or hospitalization among seniors lead to increased medical and caregiving costs.

Mizuno believes that continuing to exercise in an enjoyable way is essential to extending healthy life expectancy. Based on the idea that moving the body to a rhythm and engaging in coordinated movements involving both hands and feet can help prevent cognitive decline, we are conducting research on exercise programs specifically designed for older adults.

Future Challenges

To support seniors experiencing physical decline due to age-related muscle loss and other factors, Mizuno is advancing the development of clothing and equipment that apply motion analysis technologies originally developed for athletes.

We are also promoting the development of home-based training programs tailored to individuals who may find it difficult to exercise or go outside, along with programs designed to build exercise habits by introducing the enjoyment of using simple tools.

Through the expansion of the Mizuno Active Leader initiative, we aim to foster community environments where everyone can enjoy exercise, contributing to healthier and more active lifestyles at the local level.

Looking ahead, in addition to these efforts, we will also explore new business opportunities centered around sports by leveraging digital transformation (DX).

Materiality

Embodying Mizuno's Unique Identity and Integrated Strength

Basic Concepts

Mizuno is committed to maximizing the potential of sports to help create a society where everyone can live a healthy and active life—both physically and mentally. We believe it is essential to ensure equal access to sports for all people, regardless of age, physical ability, or place of residence. However, in order to actually participate in sports, more than just equipment and facilities are needed—human resources such as teammates and coaches also play a vital role. While advancements in digital technology have made it easier than ever to enjoy watching sports live from anywhere in the world, many people still lack opportunities to engage in physical activity themselves.

To address these challenges, Mizuno is actively working to improve access to sports and support the development of community-based sports. Through initiatives for all generations—from children to seniors—we are helping to create opportunities for local participation in sports and offering spaces where people can connect, communicate, and thrive together.

At the same time, Mizuno Group's efforts to promote sports are based on a commercial model. As a general rule, we do not provide free services or products. We believe that delivering sports to society in a sustainable manner is both our responsibility and our strength.

Mizuno Group also operates in 14 countries and regions worldwide, continuing to grow its global brand. In each region, we promote sports initiatives that reflect local characteristics and community needs. Through the power of sports, we aim to contribute to a peaceful and sustainable society. Looking toward a future where people around the world—and especially children can smile and thrive, Mizuno will continue to expand the reach and impact of our efforts.

Promotion of Sports in Local Communities

■ Hosting Mizuno Victory Clinics

Since 2007, Mizuno has been hosting the Mizuno Victory Clinic across Japan, where current top athletes and former elite competitors (OB/OG) provide hands-on instruction. These clinics not only convey the joy of sports but also contribute to the promotion of community-based sports.

Approximately 230 athletes from 20 different sports—many of whom have competed in the Olympics, World Championships, and other national and international competitions—are registered as clinic instructors. Through direct demonstrations of professional techniques and mindsets, the program fosters both skill development and interaction among participants.

By engaging top-level athletes as instructors, the program serves as a bridge between elite and local sports, offering athletes new opportunities to contribute while strengthening grassroots sports initiatives.

In fiscal year 2021, amid ongoing impacts of the COVID-19 pandemic, 52 clinics were held. As pandemic restrictions eased, the number of clinics increased to 110 in FY2022, 107 in FY2023, and 114 in FY2024.

	FY2020	FY2021	FY2022	FY2023	FY2024
Number of Events (Sessions)	24	52	110	107	114

■ Collaboration with Local Governments and Other Partners

Sports in local communities not only promote physical and mental well-being, but also help build stronger connections among residents. By bringing together the knowledge and expertise of the public, private, and academic sectors, more effective and locally tailored initiatives can be realized. Mizuno actively promotes the advancement of community sports through collaboration with local governments, regional universities, and other partners.

■ Operation of Sports Facilities

Creating opportunities for people to enjoy sports requires more than just programs—it also depends on having accessible places to play. Since 2006, Mizuno has been involved in the designated management of public sports facilities across Japan.

Through the operation and management of these facilities, as well as by offering programs tailored to various age groups, we promote community interaction and help create accessible opportunities for people to engage in sports. As a member of each community, Mizuno supports local residents in experiencing the joy of sports in a casual and inclusive way.

As of March 2025, Mizuno manages 175 locations nationwide, encompassing a total of 1,267 individual facilities.

Offering Age-Appropriate Programs

Creating Opportunities to Engage in Sports

■ Activities to Share the Joy of Sports

Mizuno hosts the Mizuno Baseball Dream Cup Junior Tournament, a youth baseball event founded on the philosophy of “Don’t scold mistakes, support each other as a team.”

In the world of youth sports, there have been times when overly harsh coaching was used in the name of skill development. Through this tournament, Mizuno aims to help more children simply experience the pure joy of playing baseball. To support this goal, coaches and parents are prohibited from scolding or shouting at children during games.

Unlike standard baseball rules, where players who are substituted out cannot reenter the game, this tournament allows players to return—ensuring more children have the opportunity to participate. Additionally, even children who have never played baseball before are welcome to join, and teams are not required to wear matching uniforms. Mizuno also lends equipment to teams that do not have their own.

In 2024, the third edition of the tournament was held, with 917 teams from across Japan participating.

Mizuno Baseball Dream Cup Junior Tournament

Baseball and softball are sports that bring excitement and inspiration not only to players but also to spectators. At Mizuno, we see it as our important mission to pass on the cultural value of these sports to future generations. While responding to the changing times, we are committed to promoting and sustaining the growth of baseball and softball in a sustainable manner.

[What Baseball and Softball Can Do for the Planet](#)

■ Participation in the Amsterdam Marathon

One of Mizuno's most prominent initiatives for promoting sports overseas is its long-standing involvement in the Amsterdam Marathon, held annually in the Netherlands. Mizuno has been supporting this event since 2000. The race includes multiple categories such as a full marathon, half marathon, and 8 km run, allowing participants to enjoy running according to their own ability levels.

The Amsterdam Marathon is held every year on the third Sunday of October. In fiscal year 2024, it took place on October 20, with over 45,000 runners from more than 105 countries entering the event. As the main sponsor, Mizuno decorated the race route with branded flags stretching over 2 kilometers around the venue. We also set up a retail booth next to the stadium, showcasing and selling apparel and footwear throughout the event.

Nearly half of the participants come from outside the Netherlands, making the Amsterdam Marathon an international, pan-European event—unlike most other races.

Through this event, Mizuno not only contributes to local revitalization but also strengthens global awareness and presence of the Mizuno brand.

We plan to continue our sponsorship and support of this impactful event in the years to come.

[TCS Amsterdam Marathon](#)

The Amsterdam Marathon 2024

Our group supports people of all ages and skill levels—from children to adults, and from beginners to advanced athletes—in enjoying sports across the globe. In regions including Europe, the United States, Australia, Taiwan, South Korea, China, and beyond, we sponsor a wide range of sporting events such as running races, rugby matches, and badminton tournaments. We also host and support sports clinics to promote participation and skill development in these activities.

Business Initiatives Addressing Social Issues Through the Connection Between Sports and Local Communities

■ PROJECT 179

In August 2021, Mizuno and Consadole Co., Ltd. launched “PROJECT 179”, a collaborative initiative aimed at revitalizing local communities. This project is named after the 179 municipalities in Hokkaido and is designed to support community development throughout the entire region. A portion of the proceeds from Mizuno products purchased by companies and organizations that support the project is reinvested into initiatives that promote local revitalization.

As one example of these reinvestment initiatives, since 2022, original “PROJECT 179” stationery sets have been continuously distributed to all first-grade elementary school students across Hokkaido. In June 2023, a special talk show event was held to raise awareness of the project.

Through “PROJECT 179,” Mizuno aims to contribute to community revitalization by harnessing the power of sports and fostering stronger connections between sports and local communities—as part of a business approach to solving social issues.

「PROJECT179」

[PROJECT 179](#)

■ Participation in the “FC Gifu Well-being Project”

Mizuno supports and participates in the “FC Gifu Well-being Project,” a regional revitalization initiative led by FC Gifu. This project brings together a wide range of organizations—including municipalities, companies, and educational institutions connected to the club—transcending industry boundaries to collaborate toward a better society.

The project focuses on five key themes: Health and Welfare, Food, Education, Disaster Preparedness, and Entertainment. Among these, Mizuno plays a central role in the area of Health and Welfare, providing programs built on two core pillars: improving physical fitness in children, and promoting health among working-age adults and the elderly. Together with FC Gifu, we aim to help solve social issues in municipalities facing challenges such as population aging and declining birthrates.

Through this initiative, Mizuno and FC Gifu are working to strengthen their partnership and contribute to building a sustainable and inclusive society in Gifu Prefecture—home to approximately 1.93 million residents where everyone can live in good physical and mental health with a sense of security and well-being.

[The Well-being Project Led by FC Gifu and Its Partner Companies](#)

Future Challenges

To promote sports and increase the number of people engaged in them, we are committed to creating “opportunities,” “places,” and “services” that support not only playing sports (“doing”) but also watching (“viewing”) and supporting (“supporting”) sports. Through these efforts, we aim to bring joy, inspiration, and dreams to local communities and contribute to regional revitalization.

We are also working to expand opportunities for children to enjoy sports in a fun and accessible way—beyond physical education classes or extracurricular clubs at school. By doing so, we hope to help maintain and grow future participation in sports, while contributing to the realization of a society where everyone can lead healthy and fulfilling lives.

Furthermore, our group is applying the technologies and materials developed in the field of competitive sports to promote a society where everyone can enjoy physical activity, and to help solve social issues through the power of sports.

Materiality

Promotion of Sports and Education

Basic Concepts

With the advancement of the information society and changes in living environments, children's physical fitness and motor skills are on the decline globally. This downward trend not only poses risks to their future health but is also raising concerns about its broader societal impact—such as increased healthcare costs and reduced labor force vitality. Addressing this issue requires a comprehensive approach involving not only educational institutions and families, but society as a whole

In Japan, several factors are believed to contribute to the decline in children's physical fitness and motor skills, including:

- A decrease in accessible and safe outdoor play areas
- Insufficient development of fundamental motor skills (such as running, jumping, and throwing) during early childhood
- The development of negative attitudes toward sports and physical activity

In response to these challenges, Mizuno has developed a proprietary exercise program aimed at improving children's physical fitness and motor skills. We are working in collaboration with educational institutions and communities across Japan to roll out this program, helping children experience the joy of movement and fostering healthy exercise habits from an early age.

Development of Mizuno's Original Exercise Program

■ Hexathlon

Mizuno has developed “Hexathlon,” a program that combines exercise-based play menus with physical fitness assessments, designed to help even children who are less confident in sports enjoy learning fundamental movements. The program is offered in partnership with local governments across Japan and delivered to various facilities, including elementary schools.

“Hexathlon” utilizes Mizuno's original equipment, developed with a focus on safety and functionality, and is structured to help children acquire basic physical movements—running, jumping, and throwing—at their own pace and ability level. By providing an integrated package of space, program, and service, Hexathlon enables children to enjoy movement while steadily improving their physical strength and motor skills.

■ “MISPO!” – A Sports School That Nurtures Both Mind and Body

Mizuno has developed its own multi-sport program, “MISPO!”, with the aim of promoting children's healthy physical development, critical thinking, and ability to cooperate with others. The program officially launched in April 2024 at four designated public sports facilities (three in Tokyo and one in Osaka).

Targeting first to third grade elementary school students, the program allows children to experience ten different sports—including baseball, tennis, table tennis, and judo—on a rotating weekly basis. Mizuno provides all the necessary equipment, and certified instructors known as “Mizuno Play Leaders” support the children in developing autonomy and teamwork.

At the end of each session, children reflect on what they've learned and record their own insights and progress. Mizuno also holds feedback meetings with parents to share and discuss each child's development in detail.

Children who express their own thoughts in their own words

Team Meeting with Friends!

Other Initiatives

To help children improve their physical strength and motor skills, it is important to encourage physical activity from an early age and to help them overcome any aversion to sports.

Mizuno runs programs such as the “Mizuno Sports School” and the “Sports Day Success School”, led by experienced Mizuno staff with extensive knowledge of sports. These programs are held in various locations and aim to help children develop basic motor skills through short-term, intensive instruction, allowing them to experience the joy of movement and fostering a love for physical activity.

For children who struggle with physical activities, Mizuno launched the “Overcoming Weakness Series” in FY2022. In addition to vaulting boxes, mats, and horizontal bars, the series now includes the “Jump Rope Confidence-Building Class.”

Rather than focusing on mastering skills, the program emphasizes fun and encourages children to enjoy jumping rope through playful movement.

Mizuno also offers a parent-child program called “PLAY! CIRCUS,” aimed at children aged 3 to 5. This movement-based play program incorporates the essential motor skills for that age group. Set in a whimsical circus theme, children take on the role of circus performers and enjoy a 60-minute session alongside a ringmaster and clowns, engaging in fun and developmentally appropriate physical activities.

Program Achievements Related to the Improvement of Children's Physical Strength and Motor Skills

Name of Session	Outline		FY2020	FY2021	FY2022	FY2023	FY2024
Hexathlon	A program that combines fun learning menus for basic sports movements with athletic ability assessment (Note: The numbers are for domestic use only.)	No. of Schools Introduced	9	7	8	23	15
		No. of Times Held	17	13	13	23	15
		No. of Participants	1,446	631	661	1,569	179
Mizuno Ninja School (Starting in the fiscal year 2021, the “Aim for the Stealthy Pokémon Greninja!” program is also being implemented.)	A story-based playful exercise program modeled after ninja training, incorporating 36 basic movements necessary for childhood growth, such as “running,” “jumping,” and “throwing.”	No. of Times Held	63	24	54	13	57
		No. of Participants	789 (in total)	487 (in total)	865 (in total)	644	1,203
Mizuno Sports School	A program for children who struggle with physical activities, incorporating exercises such as mat exercises, horizontal bars, and vaulting boxes.	No. of Times Held	182	60	45	41	50
		No. of Participants	1,760	1,018	455	788	874
Sports Day Victory School	A hands-on lesson program aimed at winning first prize in relay races and sprints at sports festivals.	No. of Times Held	7	8	5	5	7
		No. of Participants	98	259	215	165	316
Overcoming Weakness Class-Jump Rope	A program for children who struggle with jump rope, aimed at enabling them to jump even once and helping them to enjoy jump roping.	No. of Times Held			62	35	22

Promotion of Sports in Vietnam

■ Project Aimed at Promoting Mizuno Hexathlon Exercise Program in Vietnam

Mizuno has been working to promote its Mizuno Hexathlon Exercise Program in Vietnam since 2015. In Vietnam, physical education during the compulsory school years receives significantly less time compared to developed countries. Moreover, the country's exercise programs lack variety and need to better incorporate basic movements such as running, jumping, and throwing.

In September 2018, Mizuno concluded an agreement with the Vietnamese Ministry of Education and Training to incorporate the Mizuno Hexathlon into the new curriculum guidelines. Mizuno provided sports equipment to 1,000 Vietnamese elementary schools.

Additionally, in October of the same year, Mizuno and the Ministry of Education and Training officially signed a memorandum of cooperation to introduce and establish the Mizuno Hexathlon in the new curriculum guidelines. This cooperation allowed for the creation of model cases across Vietnam, demonstrating how the Hexathlon could be implemented and integrated into the educational system. From December onwards, Mizuno began promoting the program's introduction across all 63 provinces in Vietnam.

By the end of 2019, about 1,700 elementary school teachers had participated in workshops aimed at training instructors, enabling them to teach the Mizuno Hexathlon in their respective schools, thereby reaching numerous students.

Although large-scale workshops were suspended from March 2020 onwards due to COVID-19, reports indicate that local teachers who had previously participated in the workshops continued to incorporate the Mizuno Hexathlon into their physical education classes.

In June 2022, Mizuno received a special commendation from the Vietnamese Presidential Office for this initiative.

As of January 2023, the Mizuno Hexathlon was introduced as an extracurricular activity in 200 schools across Vietnam's 63 provinces (126 public schools and 74 private schools). Given that there are approximately 15,000 public elementary schools in Vietnam, Mizuno has been engaged in discussions with the Vietnamese Ministry of Education and Training since early 2023 on how to integrate the Mizuno Hexathlon into the compulsory education curriculum. This led to the signing of a new memorandum of cooperation in October 2023, witnessed by ministers from both countries. Mizuno will continue to accelerate its efforts in this initiative.

[For details on the memorandum of cooperation signed in October 2023, please refer to this link.](#)

We will continue to spread the joy of engaging in sports and the pleasure of physical activity among Vietnamese children. By leveraging the power of sports, we aim to address social challenges and work towards the achievement of 'Sports SDGs.' We remain committed to advancing this initiative.

Awarded a special commendation from the Vietnamese Presidential Office

■ Support for Orphanages and Empowerment Through Sports

In Vietnam, Mizuno is engaged in initiatives to support socially vulnerable children by donating sports equipment free of charge to local orphanages. This initiative was made possible through collaboration with a youth support project planned locally, and Mizuno chose to participate in alignment with its commitment to social contribution through sports.

Currently, preparations are underway to organize a sports tournament that will bring together multiple orphanages. In cooperation with local partners, Mizuno aims to provide opportunities for children to grow in a healthy environment and build meaningful connections through sports.

Connecting with Vietnamese Children through Badminton

Promoting the Mizuno Original License: “Mizuno Play Leader”

Mizuno is committed to creating environments where children can play freely and vibrantly by fostering “Mizuno Play Leaders” who supervise and support children’s self-initiated play. We conduct training programs to equip individuals—such as employees of child-related companies, university students, government officials, and educators—with the basic knowledge and practical skills required to become Play Leaders. These programs focus on the fundamentals of physical play and encourage active participation.

This training initiative has been steadily expanding both within and outside the company, and to date, a network of approximately 1,200 certified Mizuno Play Leaders has been established across Japan. These leaders engage wholeheartedly with children, earning their trust, and are prepared to protect them with utmost care whenever needed.

Mizuno Play Leaders

Number of Mizuno Play Leader License Holders

(People)

	In-house	Outside	Total
Grade 1	4	0	4
Grade 2	31	5	36
Grade 3	346	774	1,120

Research on Physical Play Programs Aimed at Promoting Exercise Habits in Children

To sustain participation in sports and exercise—not just in physical play—it's essential that children find the experience enjoyable. Early childhood experiences are said to leave lasting impressions into adulthood. Therefore, our research not only focuses on the physical benefits of exercise, such as improvements in fitness and motor skills, but also explores the relationship between physical play programs and children's emotional development.

Our goal is to develop play-based exercise programs that children who dislike or struggle with physical activity can join without hesitation or resistance, fostering positive experiences and long-term engagement in active lifestyles.

Providing Physical Play Programs to Support Children's Development

We offer physical play programs designed for children who struggle with precise movements required in sports or daily life. These children may often drop objects or have difficulty handling tools like scissors or knives, which can impact their daily activities. Through these programs, we aim to support their development by improving their body control and fine motor skills, helping them gain greater confidence and ability in both play and everyday tasks.

Future Challenges

Today's children are said to lack the three essential elements for play: space, companions, and time. In addition, many parents express uncertainty, saying they "don't know how to play with their children."

Mizuno is working to create environments where children can play freely and actively, while also fostering Mizuno Play Leaders—trained individuals who support and guide children's play.

Play Leaders help create spaces where children take the lead in playing with each other by offering engaging and fun physical activities. By promoting these leaders both within and outside the company, Mizuno supports the healthy development of children's minds and bodies through active play.

Looking ahead, we aim to create more opportunities and settings where Play Leaders can actively contribute. To achieve this, we must first identify potential challenges to expanding the Play Leader network, while also raising awareness among parents. By increasing recognition of the role and value of Play Leaders, and through continued delivery of physical play programs and events, we will further integrate this initiative into society.

Materiality

Contributing to sustainability through the application of Mizuno's technologies

Basic Concepts

Mizuno is expanding its business beyond competitive sports products to include daily lifestyle goods and work-related items, addressing a wide range of needs. By leveraging our strengths in the sports field, we aim to contribute to solving social issues and fostering the sound development of local communities—through the promotion of physical and mental well-being and the enhancement of diverse community interactions.

We are also committed to driving diverse innovation by utilizing our strengths in developing functional materials and technologies cultivated through competitive sports, as well as our high-quality manufacturing capabilities. Looking ahead, we will continue to contribute to sustainability by addressing social challenges, including the Sustainable Development Goals (SDGs).

Research and Development Utilizing Carbon Technology

Mizuno has long pursued research and development centered around people, focusing on human movement and form. This human-centric approach will remain at the core of our efforts as we continue to create new value through products and services that contribute to the Sustainable Development Goals (SDGs). As a manufacturing company, we are committed not only to creating “excellent products,” but also to aligning all research themes with the SDGs. Our initiatives aim to contribute to achieving medium- to long-term goals such as carbon neutrality and, ultimately, to realizing a sustainable society.

In the area of carbon technology, we are focusing on expanding product development using recycled carbon materials, researching and developing thermoplastic CFRP (carbon fiber reinforced plastic), and enhancing CFRP with nanofillers.

- **Product Development Using Recycled Carbon Technology**
One example is the development of insoles for shoes, which help reduce foot fatigue. We are promoting the use of recycled carbon for the spring components in these insoles to support the feet of walking enthusiasts, workers, and elderly individuals.
- **Research and Development of Thermoplastic CFRP**
Although the applications are similar to those of traditional thermosetting CFRP used in carbon fiber prosthetic blades, thermoplastic CFRP offers shorter molding times and easier recyclability. We aim to commercialize CFRP products that contribute to a more sustainable society.
- **Research on CFRP Enhancement with Nanofillers**
By adding materials at the nano level, we can improve the overall performance of CFRP, enabling the development of high-performance sports equipment.

■ Carbon Fiber White Cane “Mizuno Cane ST” (Enhanced Comfort and Safety)

In March 2022, Mizuno launched the straight-type white cane “Mizuno Cane ST,” developed using carbon design and processing technologies cultivated through our sports equipment manufacturing. This cane is designed with a focus on lightness and ease of use. The upper portion, near the user's hand, is made stiffer to better transmit the texture of the ground, allowing users to more easily sense surface irregularities. The tip of the cane features a teardrop-shaped stopper that reduces snagging on uneven pavement.

The product was developed in collaboration with PLAYERS, a general incorporated association^{*1}, and manufactured by Mizuno Technics Corporation^{*2}.

The “Mizuno Cane ST” received the 2022 Good Design Award (hosted by the Japan Institute of Design Promotion) and was also awarded the Grand Prize in the 2022 Nikkei Superior Products and Services Awards.

^{*1} PLAYERS is a prototyping team operating under the slogan “Tackling social issues with shared excitement.”

^{*2} Mizuno Technics Corporation is a Mizuno Group company specializing in the manufacturing of sports and carbon-based products.

Research and Development of New Sports Services

We are engaged in the research and development of new sports services that can be enjoyed together across generations, genders, and physical abilities.

Leveraging our operation of directly managed facilities and designated public sports centers, Mizuno is in a unique position to interact closely with customers in real-world settings. This allows us to effectively test and refine new service concepts. Additionally, drawing on our long-standing expertise in the research and development of sporting goods and equipment—particularly our human-centered approach—we are expanding our focus to include the development of inclusive and accessible sports services.

■ Research and Development of New Sports Incorporating Playful Elements

We are engaged in the research and development of new sports in collaboration with various associations and universities. One example is "500-Step Soccer," a sport that limits the number of steps players can take and incorporates digital devices. This allows individuals who are not confident in their athletic abilities or who typically struggle with physical activity to enjoy moving their bodies and experience the thrill of scoring goals in an inclusive, accessible way.

Leveraging our strengths in combining sports science with digital technology, and our ability to implement and operate programs through staff at sports facilities, Mizuno will continue to promote the research and development of innovative sports.

Ball and Devices for "500-Step Soccer"

Expansion of Workwear Business Utilizing the Functional Value of Sports Products

Mizuno positions the workwear business as one of its strategic domains and offers corporate uniforms, footwear, and other items for workers in various industries, leveraging the functional value of sports products. In recent years, "health and productivity management," a strategic approach to managing employee health from a business perspective, has gained attention. As a result, more companies are placing greater importance on the safety and comfort of uniforms and other provisions from a welfare standpoint.

Mizuno provides products tailored to harsh working environments, such as the Airy Jacket (fan-equipped workwear) for heat protection and the Tech Shield Jacket for cold weather. We are also promoting the development of environmentally conscious products, including corporate uniforms made from recycled PET bottle fibers and workwear using chemically recycled yarns. Through these initiatives, we aim to enhance labor productivity and contribute to the achievement of the Sustainable Development Goals (SDGs).

Airy Jacket (fan-equipped workwear)

Airy Jacket (fan-equipped workwear)

Tech Shield Jacket

History of Mizuno's Work Business Division

Since 1997, Mizuno has leveraged its expertise and technologies cultivated through the development of sporting goods to plan and sell custom corporate uniforms, establishing a dedicated department for this purpose. To date, we have supplied uniforms to more than 1,600 companies.

In response to growing demand from businesses in recent years, we officially launched work shoes in March 2016 and work apparel in February 2018. In April 2019, we established the Work Business Division to further strengthen this segment.

Additionally, in April 2019, to enhance our BtoB (Business-to-Business) operations, we expanded our corporate sales team from approximately 20 to about 90 members. Sales representatives were deployed across all regional offices from Hokkaido to Kyushu to reinforce our business outreach to corporate clients.

We are aiming to achieve domestic sales of ¥20 billion (JPY) by fiscal year 2027.

Features of Mizuno Work Apparel

Work apparel requires functionality that allows workers to move more freely and work more comfortably in response to varying environmental conditions—both indoors and outdoors, such as changes in temperature. Mizuno Work Apparel incorporates features specifically designed to meet these demands, including:

Dynamotion Fit, Mizuno's proprietary design for enhanced mobility

DryScience, a material with excellent sweat-wicking properties

Breath Thermo, a moisture-absorbing, heat-generating material that uses body moisture to produce warmth

These technologies support performance and comfort in a wide range of working environments.

"Dynamotion Fit" – Apparel Design Pursuing Ease of Movement

"Dynamotion Fit" is a design developed based on ergonomic motion analysis to enhance ease of movement during work. It supports natural body motion by reducing pulling, constriction, and discomfort, allowing for greater freedom of movement.

Development of Infrared Anti-See-Through Fabric to Protect Athletes from Secret Filming

Mizuno has developed a fabric with infrared anti-see-through functionality to help prevent athletes from becoming victims of illicit filming. In recent years, the issue of images and videos of female athletes being taken for sexual purposes at sporting events and subsequently shared online has been widely reported in various media, raising serious concerns. To address this issue of “unauthorized filming of athletes,” Mizuno undertook the development of new technology and successfully created an infrared anti-see-through fabric. This innovative fabric was co-developed through a collaborative effort among three companies: Sumitomo Metal Mining Co., Ltd., which has expertise in functional materials; Kyodo Printing Co., Ltd., known for its strength in composite material technologies; and Mizuno, which specializes in textile development and product design centered on sports.

Providing athletes with a safe environment where they can fully focus on competition not only supports the “mind” aspect of the mind, technique, and body philosophy, but also aligns with our commitment to a player-first approach—making this a vital initiative.

Support for Para Sports

Mizuno is committed to creating an inclusive environment where people with disabilities can actively enjoy sports, through the development and provision of adaptive sports equipment as well as support for athletes and teams.

■ Development of Sports Prosthetics

Since 2016, Mizuno has been collaborating with Imasen Engineering Corporation, a welfare equipment manufacturer, on the development of carbon-fiber running prosthetics, including blade-type prosthetic feet for track and field athletes. By combining Mizuno's expertise in carbon design and processing—gained through the production of various sports equipment—with sports technology such as athlete motion analysis, and integrating it with Imasen's engineering capabilities, the partnership has successfully developed world-class sports prosthetics. In September 2020, the two companies jointly developed the “KATANA Σ (Sigma),” a carbon-fiber prosthetic blade with a central aperture at the tip. The strategically placed air hole above the spike-contact area reduces air resistance by approximately 31%*1. The prosthetic is also about 15% lighter than conventional models, and its moment of inertia—which affects the ease of leg swing—is approximately 10% smaller*2.

Going forward, Mizuno aims to expand its lineup for elite athletes and promote the adoption of domestically developed prosthetics among users who have previously relied on foreign-made products.

KATANΑΣ (katana sigma), a sports plate spring jointly developed by Imasen Engineering Corporation and Mizuno

*1 Compared with a version without the air aperture. Measured by Mizuno using a wind tunnel test.
Test conditions: wind speed 18.2 m/s; prosthetic blade angled forward at 30° from vertical—the point of maximum swing velocity.

*2 Compared with conventional products. Measured by Mizuno using an inertia moment measuring device.
Test conditions: pivot axis assumed to be 460 mm from the ground and 80 mm forward from the mounting point of the blade.

■ Entry-Level Sports Prosthetic Limb

In September 2021, Mizuno and Imasen Engineering Corporation jointly developed the KATANA α, a carbon-fiber blade prosthetic designed for entry-level users in sports. Leveraging the know-how from producing competitive-grade prosthetics, this model is lightweight and easy to handle—ideal for those new to running. By equipping the blade with a specially designed sole, the KATANA α achieves spring characteristics aligned with those of top-end models. Additionally, it is designed for easy replacement from everyday-use prosthetic limbs and is priced more affordably than conventional competitive models. There are approximately 60,000 lower-limb amputees in Japan^{*1}, and according to a survey conducted by the Prosthetics and Orthotics Support Center of the Japan Railway Welfare Foundation, about 30% of their prosthesis users responded that they would like to try a sports prosthetic. Mizuno will continue to collaborate with Imasen Engineering Corporation in the research and development of sports prosthetics. Through these efforts, the company aims to support the sporting lives of lower-limb amputees and contribute to improving both health and overall well-being.

KATANAA (katana alpha) jointly developed by Imasen Engineering Corporation and Mizuno For children (left) and for adults (right)

Future Challenges

Mizuno has established and publicly released the “MIZUNO MIRAI VISION” on its website, which serves as a guiding framework for creating our products and services. We define sport as “joyful physical activity” and pursue our mission of “making people happy through sports,” aiming to create a world where everyone enjoys moving their bodies and where social issues are addressed through the power of sport.

To realize this vision, we launched our innovation hub, “MIZUNO ENGINE,” which began full-scale operations in November 2022. Through this center, we explore the potential of sport across five key domains: Competition, Health, Environment, Education, and Work, striving to drive transformation through the power of sport.

We believe that unlocking greater human potential—by enhancing focus and motivation—requires advancing our understanding of the still largely unexplored field of the human mind. To that end, we are evolving our core technology, which is based on the principle of understanding human mechanisms and designing products and services aligned with specific goals. Furthermore, we are accelerating co-creation with external partners to push forward research that explores the mechanisms of the mind, thereby opening new frontiers for innovation.

Innovation center “MIZUNO ENGINE”

Climate Change Strategy

Disclosures in accordance with the TCFD recommendations

In recent years, the direct risks to corporate profitability from natural disasters have grown too significant to ignore. Unprecedented torrential rainfalls, life-threatening heatwaves, and increasingly powerful typhoons are becoming more frequent. The sports world is also experiencing visible impacts of climate change, including rescheduling of summer events due to rising temperatures and snow shortages affecting winter sports.

The Mizuno Group conducted an assessment of climate-related risks and opportunities based on the framework established by the Task Force on Climate-related Financial Disclosures (TCFD), which was created by the Financial Stability Board (FSB) at the request of the G20.

In March 2022, we expressed our support for the TCFD recommendations and have since disclosed related information accordingly. Moving forward, we will further strengthen our governance related to climate change and develop strategies based on a thorough analysis of climate-related risks and opportunities in our business, with a continued commitment to enhancing the transparency of our disclosures.

【TCFD Disclosure Element: 1. Governance】

The Mizuno Group has established a structure in which the Sustainability Operations Council (Internal name: MIZUNO CREW21 Council), chaired by the Executive Officer in charge of Human Resources and General Affairs, meets in principle four times a year to discuss matters related to climate change. The contents of these discussions, along with the progress of sustainability activities, are reported to the Board of Directors, which supervises these efforts. From FY2021 to FY2024, climate-related matters were reported five times to the Board of Directors, four times to the Executive Officers’ Meeting (attended by directors and executive officers), and four times to the Management Council (attended by directors, executive officers, and division general managers). Within these meetings, decisions were made—seven times regarding management strategy—as well as on information sharing and disclosure, and these decisions have been reflected in the Group’s business operations.

In addition, the Sustainability Operations Council has established subcommittees such as the CREW21 Environment Committee and the Cross-departmental Products Committee. These committees independently address cross-functional issues identified as material sustainability challenges. Specific measures to address climate change-related issues are discussed within the CREW21 Environment Committee.

* “CREW21” represents Mizuno’s hope that, as members of the “crew of the spaceship earth,” all of us will play a role in conserving resources and the environment.

MIZUNO CREW21

Recognizing the importance of climate change issues facing the Mizuno Group, the Board of Directors decided in 2020 to accelerate its response to climate change. This decision was made alongside ongoing environmental conservation activities carried out as part of the Group’s corporate social responsibility (CSR) efforts. In the same year, the Board also formulated the Action Principles for the SDGs and the Value Creation Story to support these efforts.

The responsibilities of the executive officer in charge of climate-related matters, the Sustainability Operations Council, and the CREW21 Environment Committee are defined by the Board of Directors. The Board receives regular reports from both bodies—held in principle four times and six times a year, respectively—on the status of company-wide climate initiatives, environmental management (including greenhouse gas emissions), information disclosure, and investor engagement.

■ CREW21 Project

Recognizing that all corporate activities impact the environment, the Mizuno Group launched the “CREW21 Project” in September 1991 with the aim of contributing to global environmental conservation. Since then, we have been engaged in various environmental preservation initiatives. In April 2021, marking the 30th anniversary of the project, we expanded its scope beyond environmental efforts to address sustainability as a broader management priority, including social and economic aspects. “MIZUNO CREW21” has since been established as the symbol of our Group’s overall sustainability initiatives.

■ Sustainability Operations Council (Internal name: MIZUNO CREW21 Council)

The Sustainability Operations Council is chaired by the executive officer in charge of human resources and general affairs, and is composed of a diverse range of members, including the executive officers responsible for product development, comprehensive planning, and finance & legal affairs, as well as heads of closely related departments such as the legal and quality assurance offices.

The Sustainability Operations Council leads discussions on Mizuno's sustainability strategy, formulates specific action plans, and sets goals. Important issues identified by the council are presented to the Board of Directors, and upon their resolution, are implemented across all departments and locations within the Group.

■ CREW21 Environment Committee

The committee includes executive officers responsible for human resources and general affairs, product development, and key general managers from departments such as product planning, development, facility services, logistics, retail, quality assurance, legal affairs, manufacturing, and other core functions.

It discusses the formulation and revision of environmental policies, the establishment of short-, medium-, and long-term environmental targets, and the development of concrete measures to achieve them. Given the importance of reducing the environmental impact of our business activities—including the reduction of greenhouse gas emissions—as well as the development and delivery of environmentally friendly and climate-resilient products and services, the committee serves as a cross-functional platform for communication and planning in these areas.

In addition, to promote environmental conservation activities across the entire Group, Mizuno has established an Environmental Management System (EMS) led by the executive officer in charge of legal affairs.

[Sustainability Operations Structure](#)

【TCFD Disclosure Element: 2. Strategy】

With regard to short-, medium-, and long-term time horizons, the Mizuno Group identifies material issues across the entire scope of sustainability. Among these, climate-related challenges are addressed under the material topic of “Responsibility for the Global Environment throughout the Product Life Cycle.” In addition to our Environmental Management System (EMS), we are advancing our efforts through initiatives such as the Risk Management Committee—chaired by the President and Representative Director, with three vice chairs including a Senior Managing Executive Officer and Executive Officers, and five committee members comprising the heads of departments responsible for internal control—and through business continuity planning (BCP) led by the Global HR & General Affairs Department.

The Product and Development divisions regard the development and sale of environmentally friendly and climate-resilient products (i.e., products that help mitigate or adapt to climate change) as key opportunities, and are actively working on them.

Since FY2015, the potential impacts of identified climate-related issues on our business, strategy, and finances have been examined as part of our EMS framework under risk and opportunity assessment. These discussions have become more active since FY2021. Specific examples include:

- For business operations: logistics-related BCP
- For strategy: the development of environmentally friendly and climate-resilient products, as well as research into and development of new materials
- For finance: initiatives such as the introduction of renewable energy

Furthermore, the Risk Management Committee has discussed the potential impacts of climate-related risks identified through BCP analyses conducted by each product and corporate division, examining how these risks may affect business, strategy, and financial performance. Going forward, we aim to deepen such analyses—including the financial impact—and categorize climate-related risks and opportunities into physical, regulatory, and other types, with a view to enhancing our overall climate-related disclosures.

Regarding scenario analysis, we are planning to conduct assessments based on a 1.5°C scenario aligned with the Paris Agreement. We aim to integrate the insights from this scenario analysis—covering climate-related risks and opportunities and their impacts on our business model and value chain—into our organizational strategy. Our goal is to include disclosures based on the 1.5°C scenario in our 2024 sustainability report.

【TCFD Disclosure Element: 3. Risk Management】

The Mizuno Group identifies and assesses environmental risks and opportunities, including those related to climate change, at least once a year through the EMS (Environmental Management System) Promotion Office, which is part of the Compliance Department and referred to as the Environmental Promotion Office. The results of these assessments are submitted to the CREW21 Environment Committee and approved by the chair, vice-chair, and committee members. In particular, risks related to heavy rainfall and typhoons are addressed through Business Continuity Planning (BCP) measures. Within the Product Division, efforts are underway to improve management efficiency while maintaining the diversification and geographical dispersion of production bases and suppliers. For products requiring advanced manufacturing technologies—mainly equipment—where appropriate diversification of suppliers is difficult, the division is working to establish BCPs at secondary and tertiary manufacturing sites, based on business priorities.

【TCFD Disclosure Element: 4. Metrics and Targets】

To accelerate efforts toward climate change mitigation, the Mizuno Group revised its long-term environmental goals in August 2020 and committed to achieving net-zero emissions by 2050.

In April 2024, we obtained certification from the international initiative Science Based Targets initiative (SBTi). Under this commitment, we aim to reduce our Scope 1 (direct emissions) and Scope 2 (indirect emissions from energy use) greenhouse gas emissions by 50.4% by 2030, compared to the base year of 2018. Additionally, for Scope 3 emissions, we have received validation for science-based targets covering Category 1 (purchased goods and services) and Category 12 (end-of-life treatment of sold products), which call for a 58.1% reduction per ¥1 billion of value added by 2030, also from a 2018 baseline.

To achieve these targets, we will further accelerate initiatives such as energy conservation, the use of renewable energy, innovation in manufacturing processes, waste reduction, and the promotion of recycling.

To achieve these environmental targets, each relevant department is considering specific measures to reduce greenhouse gas emissions across their business operations and throughout the lifecycle of their products and services. These include the use of more environmentally friendly materials, improvements in design and manufacturing processes, and the research, development, and adoption of new production methods. Relevant information is reported and shared as needed through the CREW21 Environment Committee.

Scope 1 and Scope 2 emissions have been calculated and disclosed based on the GHG Protocol since 2000, and Scope 3 emissions since 2015. For Scope 3 Categories 1 and 12, we revised our calculation methodology by shifting from an approach based on domestic purchasing and delivery data to a more accurate life cycle assessment (LCA)-based method. In FY2021, we also established a global calculation methodology to further expand our disclosure scope. Since FY2022, we have been disclosing total emissions for Scope 1, Scope 2, and Scope 3. For detailed data on greenhouse gas emissions, please refer to the “Materiality: Climate Change” section.

[Materiality: Climate Change](#)

Other indirect greenhouse gas emissions generated in FY 2024 [*a]

Scope	Category	Category name	GHG emissions (t-CO ₂ e)	Break down ratio (%)
Scope1		Mizuno's direct emissions	4,076	0.91
Scope2		Mizuno's indirect emissions	6,921	1.54
Scope3		Others' indirect emissions	437,448	97.55
Breakdown	Category 1☐	Purchased products and services	345,128☐	78.9
	Category 2	Capital goods	13,172	3.0
	Category 3	Fuel- and energy-related activities	4,066	0.9
	Category 4	Upstream transportation and distribution	14,526	3.3
	Category 5	Waste generated in operations	729	0.2
	Category 6	Business travel	7,629	1.7
	Category 7	Employee commuting	4,241	1.0
	Category 8	Upstream leased assets	4,091	0.9
	Category 9	Downstream transportation and distribution	491	0.1
	Category 12☐	End-of-life treatment of sold products	43,375☐	9.9
Total			448,445	

* Calculations of purchased electricity emissions are location based.

* The calculation scope is the domestic Mizuno Group and overseas Mizuno Group.

* Scope 1: Greenhouse gas (GHG) emissions from a company's direct operations, such as the in-house use of fuel

* Scope 2: A company's indirect GHG emissions from purchased electricity, heat, and steam

* Scope 3: A company's indirect GHG emissions coming from product manufacturing, transportation, employees' business travel and commuting within the supply chain

* For Scopes 1 and 2, emissions are from energy sources.

* For Scope 3, non-energy source greenhouse gases are partly included according to the guidelines from the Ministry of the Environment.

* The data marked with ☐ has been assured by a third party in Japanese version of report.

* Scope1,2

Direct and indirect GHG emissions from corporate activities as defined by the GHG Protocol

* Scope3 / Category 1

The following three methods are used to calculate emission factors according to the characteristics of product categories.

- LCA of the representative model of the product sold by Mizuno in the relevant fiscal year was carried out and the emission factor of the product was calculated. GHG emissions were calculated by multiplying the sales volume with the emission factor. - ①
- In the manufacturing department, GHG emissions were calculated by multiplying the amount of substances used in manufacturing with the emission factor. - ②
- GHG emissions were calculated by multiplying the cost of products sold by Mizuno in the relevant fiscal year with the emission factor specified by the Ministry of the Environment. - ③

Total GHG emissions = ① + ② + ③

* For LCA calculation, the emission factor of LCI database IDEA version3.4 and Database on Emissions Unit Values for Accounting of Greenhouse Gas Emissions, etc., by Organizations Throughout the Supply Chain.

* Scope3 / Category 12

The following three methods are used for calculation according to the characteristics of product categories.

- LCA of the representative model of the product sold by Mizuno in the relevant fiscal year was carried out and the emission factor of the product for disposal specified by the Ministry of the Environment was calculated. GHG emissions were calculated by multiplying the sales volume with the emission factor. - ①
- In the manufacturing department, GHG emissions were calculated by multiplying the amount of substances used in manufacturing with the emission factor for disposal. - ②
- GHG emissions estimated from sales amount based on the GHG emissions calculated from ①. - ③

Total GHG emissions = ① + ② + ③

* For LCA calculation, the emission factor of LCI database IDEA version 3.4 and Database on Emissions Unit Values for Accounting of Greenhouse Gas Emissions, etc., by Organizations Throughout the Supply Chain.

* As a result of revising our calculation methodology in accordance with the GHG Protocol, previously reported greenhouse gas emissions data have been retroactively adjusted.

【Third Party Assurance】

In order to ensure a higher level of transparency and reliability while disclosing information on environmental data, Mizuno has obtained third-party assurance for the Japanese version of environmental data for the fiscal year 2024 with this report from SGS Japan Inc.

【Scope of Assurance】

GHG emissions in the fiscal year 2024 (Scope 3, Category 1,12)

Human Capital Strategy

Management Policy

Mizuno regards the values of 3F- Fair play, Friendship, and Fighting spirit as shared principles among its employees.

We value the concept of fair play in pursuit of 'justice above profit', friendship in order for each individual to have a mindset of growth through friendly competition so that they can respect each other, and a fighting spirit to work with motivation and responsibility.

We strive to foster a workplace culture in which each individual upholds a fair attitude, demonstrates high morale, acknowledges the 'differences' of others, and respects diversity, thereby enabling colleagues to share joy.

We also aim to create value for society by realizing a corporate culture where the challenge of change is encouraged, and people can find vitality and a sense of purpose in life.

Mizuno Talent Vision

With Japan's declining population, the number of sports participants has been decreasing, and as a result, the domestic sports market has remained largely flat in recent years. In addition, shifts in people's behaviors and values driven by digital technology, along with growing geopolitical instability, have made the external environment more uncertain than ever.

In the face of such challenges, we believe that achieving sustainable business growth—and realizing our corporate purpose of "contributing to society through the advancement of sporting goods and the promotion of sports"—requires each and every employee to work with vitality and continue creating value.

To this end, we consider it essential for employees of all generations and backgrounds to take on their work with a spirit of challenge. Our goal is to achieve both increased financial profit per employee and enhanced job satisfaction.

At Mizuno, our human capital strategy is built on two pillars: developing talent that fosters individual growth and strengthens our business competitiveness, and enhancing employee engagement to build stronger relationships between the company and its people.

Management Structure

The Mizuno Group has appointed the Executive Officer in charge of Human Resources and General Affairs as the Chief Human Resources Officer (CHRO), responsible for leading the Group's human capital management. This role is key to advancing the acquisition of talent and organizational capabilities necessary to achieve our management goals.

As a corporate function, the Global Human Resources and General Affairs Department aligns and drives group-wide initiatives, and is responsible for formulating and implementing the talent and organizational strategies essential to realizing our vision.

Talent Strategy

Based on our talent development policy, we support the growth and enhancement of each employee's capabilities. Through efforts to strengthen core competencies, address business challenges, and foster a culture of continuous learning, we are developing and leveraging "talent that drives Mizuno's growth."

We are also committed to providing diverse career development opportunities on a global scale—regardless of nationality, race, gender, or age—and are promoting the long-term, continuous, and strategic development of a diverse workforce.

Specifically, we focus our training and development efforts on three key areas:

1. Management talent capable of ensuring long-term business continuity;
2. Global talent that can create competitive advantage in international markets; and
3. Innovation talent that enhances customer experience through the advancement of digital technologies.

Organizational Strategy

Employee Engagement

To achieve innovation and improve productivity, we believe that individual growth, stronger interpersonal relationships, and a shared sense of unity within the organization are essential.

Since FY2022, the Mizuno Group has been conducting a company-wide employee engagement survey. By leveraging the insights gained from these surveys, the Global Human Resources and General Affairs Department is working to drive organizational transformation—engaging leadership in the process—to create a more fulfilling and motivating workplace for employees around the world. These efforts are aimed at enabling sustainable value creation over the medium to long term.

Policies and Governance Structure

Management policy

Mizuno Environmental Vision

Through dialogue and collaboration with stakeholders and our actions, the Mizuno Group is actively addressing global environmental issues to protect the rich environment where people can enjoy sports and we aim to realize a sustainable society and well-being for the next generation.

Mizuno Environmental Policy

1. Addressing Climate Change Issues
 - We work to reduce greenhouse gas emissions from our own operations (Scope 1, 2).
 - We work to reduce greenhouse gas emissions across our entire supply chain (Scope 3).
2. Contributing to the Circular Society
 - We endeavor to recycle products and materials.
 - We work to reduce water usage and conserve water resources.
3. Reducing Environmental Impact
 - We seek to minimize the impact of chemicals on people, the environment, and ecosystems.
 - We endeavor to reduce waste generated from our business activities.
4. Coexisting with Society
 - We endeavor to ensure the proper disclosure of related to environmental issues.
 - We communicate more deeply with local communities.
 - We accelerate initiatives for biodiversity.

We comply with the relevant environmental laws and regulations and set environmental targets to promote these initiatives.

1 July, 2024

Akito Mizuno
President
Mizuno Corporation

Management system

To promote environmental protection activities as a Group, Mizuno has established an environment management system, led by its operating officer.

[For more information on Mizuno's management system, please refer to Mizuno's Environmental Management System.](#)

Environmental Management System

Basic Concepts

Mizuno started the unique environmental conservation activities “Crew21 Project” ahead of the rest of the industry in 1991 when global environmental issues began to attract attention. This project was named with the idea of “taking on the role of a crew member of the ‘Spaceship Earth’ and carrying out activities to conserve resources and preserve the environment.” Since the project’s inception, Mizuno has been continuing efforts for over 30 years to make effective use of resources, reduce greenhouse gas emissions, and adopt environmentally friendly materials and manufacturing processes in their product planning.

In recent years, as the impact of climate change is increasingly felt, the company’s group set a goal in 2021 to achieve net zero greenhouse gas emissions in corporate activities by 2050. To realize this goal, they will further strengthen efforts such as innovations in manufacturing processes and the use of renewable energy. Additionally, they will continue to promote recycling, reduce waste, and use water efficiently as part of their ongoing commitment to environmental sustainability.

System for promoting environmental protection activities

To promote environmental protection activities across the Group, Mizuno has established an environmental management system, led by its executive officer.

Mizuno has formed the Crew21 Environment Committee to promote environmental management activities, which is comprised of supervisors of relevant departments. The committee is led by the Executive Officer in charge of Human Resources and General Affairs, serving as the chairman, and the Executive Officer in charge of Product Development, acting as the vice-chairman.

The Committee discusses matters such as: 1) formulating an environmental policy and revising it, 2) setting short-term, medium-term, and long-term environmental goals, and 3) instituting measures for achieving environmental goals. The Crew21 Environment Committee meets regularly, fostering communication across the entire company as it advances environmental protection activities.

[Management and Sustainability Strategy](#)

Environment Operations Structure

The History of Mizuno's global environment protection activities

Mizuno recognizes that all business activities have the potential of adversely affecting the environment. Accordingly, to help protect the global environment, in September 1991, Mizuno established a global environment protection activity project titled "Crew21," and ever since then, it has been putting effort into conducting environmental protection activities. In celebration of the 30th anniversary since initiating the Crew21 project, in April 2021, Mizuno created the logo "MIZUNO CREW21," which symbolizes all of Mizuno's sustainability activities, including not only its environmental protection activities but also social and economic activities. Mizuno will continue putting effort into helping create a sustainable world as a crew member of the Spaceship Earth.

[History of Mizuno's activities for the conservation of the global environment \(timeline\)](#)

ISO 14001 certification

The Mizuno Yoro Factory (now Mizuno Technics Corporation), Mizuno's main production site in Japan, became the first in the sports industry to obtain ISO 14001 certification in 1997. This initiative was later expanded to other domestic offices. In 2004, Shanghai Mizuno, the company's largest overseas production base, obtained certification, followed by Taiwan Mizuno in 2008. In 2015, Senoh Corporation and Senotech Corporation, which had joined the Mizuno Group, also received certification.

ISO 14001 certification is primarily applied to sites with significant environmental impact. As of March 10, 2025, the certification coverage rate is 74% for domestic sites and 26% for overseas sites, based on employee numbers.

List of offices that have obtained ISO 14001 certification

Year of acquisition	Offices that have obtained certification and the scope of application* (as of March 2024)
1997	Mizuno Technics Corporation Yoro Factory of Mizuno's Head Office, Haga Factory, Yamazaki RunBird Factory, and Hikami Factory
2002	Mizuno Corporation Osaka Head Office, Tokyo Head Office, Chubu Branch, Kyushu Branch, Yodoyabashi Store, and MIZUNO TOKYO
2004	Shanghai Mizuno Corporation Ltd.
2008	Taiwan Mizuno Corporation
2015	Senoh Corporation Matsudo Head Office and Fukuoka Branch Senotech Corporation
2020	Osaka Chayamachi Store
2023	Senoh Corporation Osaka Branch

Environmental audit

The Mizuno Group conducts an internal audit and has the ISO 14001 certification body examine itself annually. According to the examination conducted by the certification body in the fiscal year 2024, Mizuno had no major issues. In addition, Mizuno has already completed resolving all minor issues.

Number of Environmental Audit

	Issues pointed out by Mizuno's internal audit (No. of issues)	Issues pointed out by the certification body's examination (No. of issues)
Major issues	11	0
Minor issues	1	2
Opportunities to resolve issues	0	0

"Opportunities to resolve issues" refers to advice aimed at making things better, and we carefully review its content before taking appropriate action.

Complying with environmental laws and regulations

To comply with environmental laws and regulations, Mizuno maximizes its environment management system and identifies environmental risks that could be underlying its business. Whenever a risk is identified, to prevent accidents and minimize danger, Mizuno regularly performs maintenance and inspection of equipment and facilities and also conducts emergency response drills.

In fiscal year 2024, Mizuno was not found as violating any environmental laws and regulations, did not experience any major accidents, and was not charged any penalties.

Preventive approaches and precautionary principles

Mizuno strives to prevent environmental impact and reduce the environmental burden at every stage of the process, from planning and development to manufacturing.

In fiscal year 2018, Mizuno conducted an analysis using a life-cycle assessment (LCA) for WAVE RIDER 21, a representative model of running shoes in its footwear business, identifying the processes and environmental aspects that have significant impacts within the product's lifecycle. In fiscal year 2021, Mizuno carried out LCA analyses on representative products by category, estimated their respective greenhouse gas emissions, and is utilizing these findings in future measures.

Environmental education

The Mizuno Group provides environmental education to all employees to raise individual awareness of environmental issues. Each department conducts its own training sessions, which help employees understand the company's approach and goals regarding environmental conservation, while also covering a wide range of annual topics.

In addition, specialized training is provided at each site to improve the skills and knowledge required for specific roles, such as waste management personnel and organic solvent users.

Training Topics Include:

- Mizuno's Approach to Sustainability and ESG
- Environmental Conservation Activities
- New Chemical Substance Regulations under the Industrial Safety and Health Act
- Industrial Waste Management, etc.

Disclosure of Environmental Information

Mizuno discloses environmental information on its website. The sustainability report, which includes environmental information, is available in both Japanese and English. The information disclosed on the website can be downloaded as a PDF.

Factory Tours

Mizuno conducts factory tours at its production sites, including the Yoro Plant and Senotech, to showcase its manufacturing expertise and on-site operations. In recognition of World Environment Day on June 5, Mizuno designates June as "Mizuno Environmental Month" and has been organizing cleanup activities around its domestic and overseas offices since 1997.

In fiscal year 2024, a total of 886 visitors from 49 companies and organizations participated in factory tours.

Summer Vacation Factory Tour

Risk Communication

Mizuno Technics is engaged in risk communication through regular dialogue with stakeholders. This effort involves inviting local government officials and residents to actually tour the factory and explaining how the factory operates using various equipment, what products and waste are created, and what environmental conservation activities are being conducted. It's a proactive initiative where information is openly shared with community representatives, and their opinions and requests are actively solicited and incorporated into ongoing activities.

Environmental Workshop

Mizuno conducts environmental workshops with the aim of nurturing children's environmental awareness through its manufacturing and environmental conservation activities. In the workshops, the history of sports equipment and Mizuno's initiatives at the factory are introduced, and participants engage in crafting original keyholders using wooden bat offcuts and leftover leather from baseball gloves.

Making Keychains Using Scrap Wood from Baseball Bats

Solar panels installed at Mizuno Technics Yoro Factory

The Mizuno Technics Yoro Factory manufactures baseball and golf products, which are Mizuno's core products and other sporting goods and the products made from composite material (carbon material). We installed solar panels on the roof of the factory's largest building, the golf manufacturing building, in January 2023. This will generate approximately 400,000 kw of electricity per year, which will be used in the manufacturing processes of golf clubs, base bats and other products.

We also installed emergency power supply equipment along with solar panels to ensure a stable power supply even in the event of a natural disaster. This emergency equipment not only serves the factory, but is also aimed at benefiting the local community by supplying power to neighboring areas in the event of an emergency.

Materiality

Mitigation of Environmental Impact in Products

Basic Concepts

Toward the achievement of its medium- to long-term environmental targets, Mizuno conducts life cycle assessment (LCA) for representative products in each product division. They analyze and understand the environmental impact throughout the entire life cycle of the products, from the procurement of raw materials to disposal, and promote the mitigation of the environmental impact across the entire life cycle.

In procuring raw materials, Mizuno selects recycled materials and plant-based materials. It is also committed to extending the lifetime of its products by increasing their durability and providing high-quality maintenance and repair services.

Additionally, in the construction and operation management of sports facilities, Mizuno proposes environmentally friendly methods to clients and contractors, such as reducing waste materials and using recycled materials.

Understanding Environmental Impact in the Product Life Cycle

In 2023, Mizuno participated in Osaka Prefecture's "Supply Chain-wide CO₂ Emissions Visualization Model Project," calculating and reporting CO₂ emissions related to the carbon footprint (CFP) in the apparel and equipment sectors. Given the wide variety of products that Mizuno manufactures and sells, it is essential to establish a method that balances accuracy with operational workload. Moving forward, we will continue to advance our life cycle assessment (LCA) and CFP analyses, and work towards reducing environmental impact.

■ Running shoes that offset CO₂ emissions by tree planting – Part 3

At Mizuno, we aim to become "Net Zero by 2050" in order to build a sustainable society.

As part of these efforts, we have been developing the WAVE NEO COLLECTION since 2022, with the goal of creating shoes that reduce environmental impact while maintaining the performance of Mizuno running shoes.

In 2024, we launched the third model in the series, MIZUNO NEO VISTA.

Approximately 60% of the materials used in the upper and sole of MIZUNO NEO VISTA are low environmental impact materials, such as recycled polyester, plant-derived components, and water-soluble printing. Compared to a shoe of the same design made entirely from petroleum-based materials with dyed upper components, this model achieves a 17% reduction in CO₂ emissions.

Furthermore, for the first time, Mizuno has adopted a sole material that blends algae, which can negatively impact the environment, with conventional materials

In addition, since the launch of "NEO COLLECTION" in 2022, with the aim of absorbing CO₂ emitted during the product life cycle of these shoes, we have continuously engaged in tree planting activities in cooperation with the United States National Forest Foundation. We are doing the same for the "MIZUNO NEO VISTA" and have newly planted approximately 100,000 trees. According to the reforestation report by National Forest Foundation, "That is equivalent to removing more than 20,600 cars off the road for one year"*1

This latest planting brings our total number of trees planted in relation to the “NEO COLLECTION” to over 260,000. These trees will continue to absorb CO₂ from the atmosphere for nearly 100 years.

*1 source: U.S. Environmental Protection Agency

[Running shoes that offset CO₂ emissions by tree planting – Part 3](#)

Use of Raw Materials and Recycling

At Mizuno, due to the wide variety of products we offer, it is difficult to list all the types of raw materials used in manufacturing. Therefore, we report on the main raw materials used in our key products. These include plant-derived and recycled materials.

In addition to using these materials in traditional shoes and apparel, we are also expanding the use of recycled materials to baseball equipment and healthy interior products.

Representative Examples	Recycled Materials
Equipment	Aluminum from decommissioned train cars is repurposed into metal baseball bats. Seat fabric from retired trains is reused in training equipment. Recycled polyester is used for the lining of team-use backpacks, such as those for baseball.
Shoes	Recycled polyester is used in the uppers. Plant-derived materials (Pebax® Rnew® / Rilsan®) are used in the wave plates. Undyed knit materials are used for the uppers. Algae-based material “BLOOM” is used in the midsoles and insoles.
Apparel	Materials made from recycled PET bottles. Plant-derived synthetic fibers. Biodegradable synthetic fibers. Materials that reuse rice husks.

■ Baseball bats made from recycled aluminum from bullet trains -Part 2

~60th Anniversary of the Tokaido Shinkansen – 0 Series Model~

In collaboration with Central Japan Railway Company (JR Central) and JR Tokai Trading Co., Ltd., Mizuno developed its first-ever aluminum bat made from recycled materials in 2023—a children’s metal bat using aluminum from decommissioned Tokaido Shinkansen train cars.

This “Recycled Tokaido Shinkansen Aluminum” reduces environmental impact by requiring significantly less energy during production compared to newly manufactured aluminum, resulting in a 97% reduction in CO₂ emissions.
(Source: Japan Aluminium Association)

In 2024, as the second installment of this initiative, Mizuno released a bat modeled after the original 0 Series Shinkansen, using approximately 95% “Recycled Tokaido Shinkansen Aluminum.”

While the bat’s shape remains the same, special attention was paid to the design. The cap portion of the bat was inspired by the nose of the Shinkansen, capturing the iconic and charming form of the 0 Series. The window design was also based on the large window type used in the early 0 Series models from 1964.

Mizuno’s first domestically produced metal bat, launched in 1971, and the 0 Series Shinkansen, introduced in 1964 as Japan’s first bullet train, both represent milestones of innovation from the same era.

Together with JR Central, Mizuno created this commemorative bat using recycled aluminum from the Tokaido Shinkansen, with the hope of inspiring and supporting children who are chasing their dreams.

In collaboration with the JR Central Group, Mizuno will continue to promote initiatives such as the production of metal bats using Recycled Tokaido Shinkansen Aluminum, as part of its ongoing commitment to building a sustainable society through environmental conservation.

■ “Les Plie Squat”: Using Moquette from Osaka Metro Seats

“Osaka Metro × Mizuno Le Plié Squat” Released in 2024

This product was made possible for the first time through a shared vision between Mizuno and Osaka Metro Create, which has been planning and developing upcycled products using materials from retired train cars as part of its “Decommissioned Train Recycling Project.”

The Osaka Metro Limited Edition Model of the “Le Plié Squat,” a chair that supports squat exercises while seated, features a seat cover made from moquette fabric used in Osaka Metro train seats. This allows users to enjoy comfortable home training while experiencing the atmosphere of Osaka Metro vehicles.

[“Les Plie Squat”: Using Moquette from Osaka Metro Seats](#)

■ Apparel Recycling Activities at the Osaka Marathon 2025

Due to rising temperatures caused by global warming, it is becoming increasingly difficult to engage in outdoor sports such as running. To help preserve a global environment where people can continue enjoying sports for years to come, Mizuno is promoting recycling initiatives by collecting used apparel and repurposing it as a resource.

At the “Osaka Marathon 2025” held in February 2025, Mizuno once again set up a collection box at its EXPO booth, accepting donations of used apparel from participants.

Additionally, since many runners wear ponchos for warmth, Mizuno created environmentally friendly ponchos made from recycled materials. These ponchos can be recycled again after use and were available for purchase at the EXPO booth.

Osaka Marathon EXPO 2025 collection box for used apparel

Osaka Marathon EXPO 2025 collection box for used apparel

Exhibition and Sale of Recycled Ponchos

For the first time, Mizuno also collected ponchos on race day. Collection boxes were placed at four locations, including the starting area, and runners were encouraged to participate. Recyclable ponchos collected during the event will be repurposed into packaging materials for logistics and other uses.

Efforts to Reduce Environmental Impact in the Manufacturing Process of Products

■ Running apparel that uses dope dyed yarn to conserve water

Mizuno has started using dope dyed yarn in its Dry Aeroflow t-shirts, which are functional running apparel, in the autumn/winter season 2023. Dope dyed yarn refers to yarns that are colored at the raw material stage before they become threads. By weaving fabric using these dope dyed yarns, it is possible to simplify the general apparel dyeing process, reduce energy use, and conserve water resources.

Running apparel that uses dope dyed yarn

■ Realizing a sustainable future: Development of the new material “Techfill Breath Thermo”

Mizuno has developed a new material called “Techfill Breath Thermo”, which offers warmth that surpasses down insulation*1. In addition to being warmer than down*1, “Techfill Breath Thermo” maintains its heat retention even when wet, making it a reliable insulating material that performs well regardless of weather conditions.

Typically, down products are made using waterfowl feathers. By developing “Techfill Breath Thermo”, a material that exceeds down in terms of warmth, Mizuno aims to contribute to more sustainable sourcing of materials.

*1 Based on Mizuno's research. Thermal insulation properties were compared using 20x20cm samples with the KES Thermo Labo II in an environment of 20°C and 65% relative humidity. Test material: “Techfill Breath Thermo” cotton. Comparison material: Down (90% down, 650 fill power).

[Techfill Breath Thermo” Special Feature Page](#)

URL: <https://jpn.mizuno.com/technology/techfill>

Initiatives for Worker Uniforms

Mizuno manufactures and sells shoes and apparel for workers in industries such as construction, transportation, and manufacturing, utilizing the technologies and expertise it has cultivated through the development of sports equipment.

Mizuno also develops products for the medical field, offering apparel for healthcare professionals made with environmentally friendly materials. In the apparel industry, used garments and fiber waste generated during manufacturing are common. Instead of disposing of these materials, Mizuno is working to recycle them through chemical recycling—a process that chemically treats the waste and regenerates it into raw yarn.

Mizuno's medical apparel—including V-neck scrub tops, pants, jackets, and doctor's coats—uses polyester made from these chemically recycled materials.

Medical Apparel Made with Chemically Recycled Materials

[MIZUNO MEDICAL](#)

Initiatives to effectively utilize the offcuts produced in the manufacturing process

■ Sandals made with recycled carbon fiber

Mizuno has long utilized carbon materials in products such as golf shafts, tennis rackets, and baseball bats, enhancing sports equipment by leveraging the unique properties of carbon. Although carbon offcuts generated during the manufacturing process were previously considered difficult to recycle, rapid technological advancements have made reuse increasingly feasible.

Since 2022, we have been offering the “SETTA C/Reborn” sandals, which feature a plate made from recycled carbon fiber called “HAYATE-®.” To date, the production of these sandals has repurposed approximately 30 kg of carbon fiber scraps.

By using this recycled material, we are not only contributing to resource circulation but also improving the product’s performance. Compared to traditional materials, the recycled carbon fiber enhances rigidity while providing an elastic, comfortable wearing experience.

“SETTA C/Reborn”

“SETTA C/Reborn”

[SETTA C/Reborn: Traditional Japanese Sandals Made with Recycled Carbon Fiber](#)

■ Reusing offcuts from wooden baseball bats

One of Mizuno's main products is wooden baseball bats. Since wood is a natural material, it may have knots or other imperfections, leading to the creation of offcuts that are unsuitable for use as bats during the manufacturing process. We constantly consider and try to transform them into new other products with using offcuts from wooden baseball bats which fail to meet the required strength and appearance standard on baseball bats.

■ Utilization of Unsuitable Wooden Baseball Bat Materials at the Zoo

Mizuno has donated 300 noncompliant-material bats to the Osaka Tennoji Zoo, Japan. These woods are used as perches for the sulphur-crested cockatoos, crossing posts for posts for the pig-tailed macaques, and fencing in the zoo. We hope the animals will feel the comfort that only natural materials can provide.

Utilization of Non-Standard Wood Bat Materials at Tennoji Zoo

■ Tableware utilizing recycled bat material

Through our connection with skilled woodcraft artisans in Shimane Prefecture, Mizuno has successfully upcycled wooden bat materials that were deemed unsuitable for use into tableware.

Bat materials are cut into seven pieces, and each piece refashioned into new items by master craftsmen: tumblers, single-flower vases, toothpick holders, chopstick rests, and mini sake cups. Mizuno and wood craftsmen have always valued the blessings of the forest, and hope that these new products will bring the warmth and sense of serenity that only wood provides to the dining tables of as many people as possible, not just baseball fans.

Tableware Made from Repurposed Wooden Bat Offcuts

■ Utilization of Baseball Glove Scrap Materials

Mizuno baseball gloves are made from different parts that have been cut out from high-quality leather, with due consideration given to flexibility and durability, and that are then put together by seasoned craftspeople.

One issue arising from this manufacturing process was that, no matter what we tried, large amounts of leather scraps would be left over unused.

We started thinking about how we could reuse these scraps, instead of throwing them away, and came up with the idea of trying to “patch” them together to make gloves. The result was TSUNAGI Glove, a glove for rubber-ball baseball.

Our craftspeople’s skills made it possible to combine these many different scraps and still make a glove with the right shape and structure to securely catch a ball. Because they are made from a random assortment of scraps, each glove has its own unique design.

TSUNAGI Glove: Patched together from scrap leather

* Not for use in official competitions.

* Available exclusively at Mizuno directly managed stores.

[「TSUNAGI GLOVE」](#)

Research into the development of environmentally friendly raw material

Mizuno conducts research into the development of nonpetroleum-derived raw materials as a substitute for petroleum-derived raw materials. Mizuno currently puts effort into conducting research into the development of plant-derived raw materials, and it sees nanomaterials, such as cellulose nanofibers, as being promising candidates.

Future Challenges

Of the entire amount of GHG emissions that Mizuno's business activities currently generate, indirect emissions that fall into the category of Scope 3 account for about 97%. Particularly, because about 80% of those indirect emissions are related to purchased products and services, Mizuno recognizes the importance of reducing greenhouse gas emissions through their products. We will continue to promote product planning and development aimed at reducing GHG emissions.

Materiality

Climate Change

Basic Concepts

To help create a decarbonized society, the Mizuno Group is committed to reducing energy consumption and energy-derived CO₂ emissions across the entire group.

Recognizing the importance of reducing greenhouse gas (GHG) emissions throughout the entire value chain, Mizuno is also working to lower GHG emissions associated with its products.

In April 2024, Mizuno's reduction targets were officially certified by the international initiative, the Science Based Targets (SBT) Initiative. Following this certification, we revised our GHG calculation methods, including adopting the market-based approach for Scope 2 emissions within Japan.

Energy consumption

Mizuno is actively engaged in a variety of initiatives aimed at achieving its long-term environmental targets.

Key efforts include the installation of solar power systems at domestic factories and the expansion of LED lighting at offices both in Japan and overseas. In particular, facilities with relatively high environmental impact—such as the headquarters building and factories—are being prioritized for strategic implementation to reduce energy consumption.

Additionally, Mizuno is gradually replacing its company vehicles with hybrid and other fuel-efficient models, and has introduced electric vehicles in some areas to evaluate their safety and environmental benefits.

All company vehicles are equipped with telematics systems, which visualize driving behavior. This not only encourages safer driving but also contributes to improved fuel efficiency and reduced CO₂ emissions.

In fiscal year 2024, Mizuno's total domestic energy consumption was 111,730 GJ. Energy intensity decreased by 4.1 points from the previous year, reaching 75.9.*

Total Energy Consumption and Energy Intensity [b]

* The breakdown of energy consumption includes non-renewable fuel sources, electricity, heating, cooling, and steam. At this point, fuel sources from renewable energy, such as biofuels, have not been identified.

* Energy consumption does not include external energy consumption within the organization.

* Intensity of energy consumption: Domestic energy consumption (GJ) / Total domestic sales revenue (hundred million yen)

* The calculation uses coefficients from the LCI database IDEA version 3.4.

* Figures for FY2018 and FY2023 have been retrospectively revised due to updates in certain data.

Breakdown of energy consumption [*b]

* The calculation uses coefficients from the LCI database IDEA version 3.4.

Key Initiatives for Reducing Energy Consumption

Mizuno is progressively converting lighting to LED to reduce energy consumption. Equipment used in our buildings is being upgraded to energy-efficient models as they come up for replacement. However, due to the difficulty in tracking the reduction amounts and types of energy for individual initiatives, there are currently no plans to disclose this information.

Energy-derived GHG Emissions

In fiscal year 2024, the Mizuno Group set a target for total energy-derived greenhouse gas (GHG) emissions of 11,428 t-CO₂e (market-based), and achieved actual emissions of 10,997 t-CO₂e. This result exceeded the reduction target, indicating steady progress in reducing GHG emissions across the entire group. Going forward, Mizuno will continue working to further reduce emissions through the introduction of energy-saving equipment, operational efficiency improvements, and the use of renewable energy sources. No GHG emissions from biological sources, such as biomass combustion, have been identified.

* Figures are calculated using the market-based method.

Regional GHG emissions and intensity

Location-based method

Market-based method

* Energy intensity: Greenhouse gas emissions (t-CO₂e) / Consolidated net sales (100 million yen).

* Due to rounding, the sum of individual items may not exactly match the total figures shown.

* Figures for FY2023 have been retrospectively revised due to updates in certain data.

* For FY2024, data from FY2023 has been used for some sites.

Other Indirect Greenhouse Gas Emissions

Mizuno recognizes that achieving a decarbonized society requires not only reducing greenhouse gas (GHG) emissions from its own operations, but also taking action across the entire value chain.

Accordingly, Mizuno calculates GHG emissions throughout its value chain based on Scope 3 standards defined by the GHG Protocol. In fiscal year 2024, Scope 3 emissions accounted for 97.55% of Mizuno's total GHG emissions.

To reduce these emissions, Mizuno is working with partners such as Sumitomo Warehouse, which operates its main distribution centers, to promote the installation of LED lighting. Additionally, Mizuno is advancing a modal shift in transportation between major logistics hubs in western and eastern Japan.

Within Scope 3, Category 1 ("Purchased Goods and Services") and Category 12 ("End-of-Life Treatment of Sold Products") together account for approximately 80% of total emissions.

In fiscal year 2021, Mizuno revised its calculation method for these categories, adopting an LCA-based approach.

To further reduce emissions in Category 1, Mizuno continues to promote the use of environmentally friendly materials such as recycled and plant-based resources, while collaborating with supply chain partners to explore additional reduction measures.

Other indirect greenhouse gas emissions generated in FY 2024(Market-based method)

Trends in Greenhouse Gas Emissions

Energy-Derived Greenhouse Gas Emissions (t-CO₂e): Scope 1 and Scope 2 [*a]

		FY2018 (Base Year)	FY2022	FY2023	FY2024
Scope1		4,757	4,073	4,044	4,076
Scope2	Location-based method	11,284	8,704	8,518	7,916
	Market-based method	10,314	7,157	7,165	6,921
Total(Scope1+Scope2(Market-based method))		15,071	11,230	11,209	10,957
Comparison to Base Year (%)			74.5	74.4	73.0

Other Indirect Greenhouse Gas (GHG) Emissions (t-CO₂e): Scope 3 [*a]

Category	FY2018 (Base Year)		FY2022		FY2023		FY2024	
	GHG emissions	Breakdown (%)	GHG emissions	Breakdown (%)	GHG emissions	Breakdown (%)	GHG emissions	Breakdown (%)
Category 1 (Purchased products and services)	391,915	81.7	347,760	79.5	328,521	79.9	345,128	78.9
Category 2 (Capital goods)	9,392	2.0	16,896	3.9	6,451	1.6	13,172	3.0
Category 3 (Fuel- and energy-related activities)	3,755	0.8	3,663	0.8	3,569	0.9	4,066	0.9
Category 4 (Upstream transportation and distribution)	10,855	2.3	15,286	3.5	15,319	3.7	14,526	3.3
Category 5 (Waste generated in operations)	317	0.1	364	0.1	583	0.1	729	0.2
Category 6 (Business travel)	4,207	0.9	2,533	0.6	7,275	1.8	7,629	1.7
Category 7 (Employee commuting)	4,438	0.9	4,161	1.0	4,219	1.0	4,241	1.0
Category 8 (Upstream leased assets)	3,686	0.8	3,885	0.9	4,472	1.1	4,091	0.9
Category 9 (Downstream transportation and distribution)	159	0.0	137	0.0	509	0.1	491	0.1
Category 12 (End-of-life treatment of sold products)	51,001	10.6	42,852	9.8	40,123	9.8	43,375	9.9
Total	479,724	100.0	437,537	100.0	411,041	100.0	437,448	100.0
Comparison to Base Year (%)			91.2		85.7		91.2	

Notes:

- * Emissions from purchased electricity in Japan are calculated using the market-based method.
- * The calculation scope is the domestic Mizuno Group and overseas Mizuno Group.
- * Scope 1: Greenhouse gas (GHG) emissions from a company's direct operations, such as the in-house use of fuel.
- * Scope 2: A company's indirect GHG emissions from purchased electricity, heat, and steam.
- * Scope 3: A company's indirect GHG emissions coming from product manufacturing, transportation, employees' business travel and commuting within the supply chain.
- * For Scope 1 and 2, emissions are from energy sources.
For Scope 3, non-energy source greenhouse gases are partly included according to the guidelines from the Ministry of the Environment.
- * The data marked with  has been assured by a third party in Japanese version of report.
- * Scope 1 and 2:
Direct and indirect GHG emissions from corporate activities as defined by the GHG Protocol.
- * Scope 3 / Category 1:
The following three methods are used to calculate emission factors according to the characteristics of product categories.
 - LCA of the representative model of the product sold by Mizuno in the relevant fiscal year was carried out and the emission factor of the product was calculated. GHG emissions were calculated by multiplying the sales volume with the emission factor. - ①
 - In the manufacturing department, GHG emissions were calculated by multiplying the amount of substances used in manufacturing with the emission factor. - ②
 - GHG emissions were calculated by multiplying the cost of products sold by Mizuno in the relevant fiscal year with the emission factor specified by the Ministry of the Environment. - ③Total GHG emissions = ① + ② + ③
- * For LCA calculation, the emission factor of LCI database IDEA version3.4 and Database on Emissions Unit Values for Accounting of Greenhouse Gas Emissions, etc., by Organizations Throughout the Supply Chain.
- * Scope3/Category 12
The following three methods are used for calculation according to the characteristics of product categories.
 - LCA of the representative model of the product sold by Mizuno in the relevant fiscal year was carried out and the emission factor of the product for disposal specified by the Ministry of the Environment was calculated. GHG emissions were calculated by multiplying the sales volume with the emission factor. - ①
 - In the manufacturing department, GHG emissions were calculated by multiplying the amount of substances used in manufacturing with the emission factor for disposal. - ②
 - GHG emissions estimated from sales amount based on the GHG emissions calculated from ①. - ③Total GHG emissions = ① + ② + ③
- * For LCA calculation, the emission factor of LCI database IDEA version 3.4 and Database on Emissions Unit Values for Accounting of Greenhouse Gas Emissions, etc., by Organizations Throughout the Supply Chain.
- * Past GHG emission figures have been retrospectively revised due to updates in calculation methods based on the GHG Protocol.

【Third Party Assurance】

In order to ensure a higher level of transparency and reliability while disclosing information on environmental data, Mizuno has obtained third-party assurance for the Japanese version of environmental data for the fiscal year 2024 with this report from SGS Japan Inc.

[PDF of Assurance Report](#) 

【Scope of Assurance】

GHG emissions in the fiscal year 2024 (Scope 3, Category 1,12)

Other Emissions to the Atmosphere

There are no relevant emissions of ozone-depleting substances (ODS), nitrogen oxides (NOx), sulfur oxides (SOx), and other significant atmospheric emissions, so reporting on these is not being conducted.

Future Challenges

- Mizuno will strive to reduce GHG emissions in Scopes 1, 2, and 3 in accordance with the guidelines of the Paris Agreement and continue to strengthen these activities moving forward.
- We will promote initiatives aimed at the adoption of renewable energy, energy conservation, and the transition to low-carbon energy sources.
- Mizuno will promote efforts throughout the supply chain to reduce Scope 3 emissions.
- Mizuno will work towards building a circular economy, including waste reduction and promoting a circular economy.

Water Use and Management

Basic Concepts

Water resources are not only essential to conducting business but also essential to everyday life and the production of food of the regional community and the maintenance of biodiversity. In the manufacturing of sports equipment, the production of raw materials and the manufacturing process of products have a great impact on water resources. Mizuno puts effort into reducing the amount of water use, including the developing of manufacturing technologies that will allow the reduction of water use.

To play its part in the circulation of water resources responsibly, Mizuno will pay even greater attention to the effluent its manufacturing bases discharge into the sewage and general rivers and also ensure that it complies with laws relating to septic tanks and water quality management.

Water intake by water source [*b]

Domestic Group

Overseas Group

* The performance figures for the Netherlands site in fiscal year 2024 are based on the actual results from fiscal year 2023.

Water-resource Measures Taken in Supply Chains

As supply chains expand globally, addressing water pollution in manufacturing countries has become an important issue. Mizuno uses the World Resources Institute (WRI)'s Aqueduct, a tool that provides global maps and information on water risks, to identify current and future water risks at its offices and factories worldwide. The water risk surveys have been completed at all 37 Mizuno locations: 18 in Japan (including subsidiary offices) and 19 overseas.

Through the surveys, we identify domestic business sites with high water risk and take measurements to minimize the damage after a detailed assessment.

Within this survey, high water-risk domestic locations were identified, and detailed assessments were conducted to implement measures to minimize potential impacts.

Additionally, as part of its CSR procurement audit, Mizuno checks whether its suppliers are properly managing effluent and ensuring that employees have safe access to water.

Future Challenges

- Mizuno will seek to fully grasp the facts of its water use from multiple perspectives, including the current levels of its global water usage and water-related impacts, as well as future water-related impacts on its business activities.
- If a water risk proves to exist, Mizuno will adopt appropriate countermeasures according to the nature of the risk and the social situation.

Reduction of hazardous chemical substances

Basic Concepts

Mizuno is working to reduce the use of chemical substances that may have adverse effects on human health and ecosystems, and is actively seeking safer alternatives. Each business site conducts risk assessments of chemical substances, evaluating their hazards and toxicity by category, and promotes the substitution of high-risk substances with lower-risk alternatives.

In fiscal year 2024, there were no major leaks of hazardous chemical substances from Mizuno's manufacturing facilities. In addition to its production sites, Mizuno also promoted risk assessments of chemical substances used for repairs at offices and retail stores.

For more information about Mizuno's system for managing hazardous chemical substances to ensure the safety and quality of its products, [please refer to the "Ensuring of the safety and quality of products" page](#).

Reducing organic solvent (toluene) emissions

As part of its efforts to minimize health risks to workers, Mizuno is working to reduce toluene emissions by replacing adhesives containing toluene—used in shoe manufacturing—with water-based alternatives.

Storing PCB

The Law Concerning Special Measures against PCB Waste requires business operators who store PCB waste to annually report the condition under which PCB waste is being stored and to dispose of PCB waste by the end of March 2027.

At Senotech Corporation, one transformer with low PCB content is being stored. Therefore, the company submits an annual report in June to the local municipalities on the storage and disposal status of the polychlorinated biphenyl (PCB) waste.

Future Challenges

- Mizuno is committed to using materials that do not contain hazardous chemical substances, starting from the design stage of the manufacturing process.
- Mizuno's ultimate goal is to switch to paints and adhesives that do not contain organic solvents. If an immediate switch is not possible, Mizuno will transition to ones that contain solvents with lower levels of hazard.

Reduction of waste

Basic Concepts

To help prevent environmental pollution and create a world that uses sustainable resources, Mizuno puts effort into reducing waste by taking into consideration its products' life cycles, from the designing and manufacturing stages to product use and disposal. In addition, Mizuno ensures that industrial waste generated at each of its offices is disposed of properly by checking manifests and regularly visiting offices. Mizuno's main offices operate based on digital manifests.

Reduction of Industrial Waste

Mizuno's manufacturing bases have long been committed to reducing industrial waste. For the fiscal year 2024, the target for industrial waste emissions was set at 127.7 tons, while the actual emissions amounted to 172.1 tons. This represents a 34.8% increase compared to the target and a 28.6% increase from the previous fiscal year.

The significant increase was due to a rise in overall waste associated with increased production volume, as well as the disposal of waste acid and alkali resulting from equipment maintenance. These factors contributed to a substantial increase in emissions compared to the previous year.

Gross weight of industrial waste by base [*b]

* Due to constraints related to equipment, costs, and operational complexity, we do not currently manage waste by composition.

Efforts Towards Resource Recycling

Mizuno is committed to reducing the total amount of waste at its domestic manufacturing bases by promoting thorough reuse and separation, and by sharing information across business sites to convert waste into valuable resources for recycling. At Mizuno Technics, 98.8% of the industrial waste generated is recycled. Since fiscal year 2020, leftover leather from glove production has been recycled and sold as a valuable material. At sales destinations, it is processed into DIY leather sheets for effective use.

Note: General waste is not included in Mizuno's zero-emission target.

Reducing the environmental impact of apparel product tags

Mizuno will start using mixed paper that contains offcuts generated during the cutting of the apparel fabric, for the product tags of new apparel introduced in the 2023 spring/summer season for the Japanese market. Through this initiative, we aim to reduce wastage of apparel material and minimize the use of paper resources. We are also working on reducing the use of product tags itself by simplifying, consolidating and digitalizing tags, with a view to reducing the number of product tags by approximately 4 million pieces per year.

Through these efforts, it is expected that we will reduce CO₂ emissions by approximately 11.8 tons annually.

■ Gross weight of waste by treatment method being adopted at Mizuno's domestic manufacturing bases (four factories) and waste sold as valuables [*e]

[Please refer to ESG data for details.](#)

Mizuno's Plastic Waste Zero Declaration

Mizuno is actively working to reduce plastic waste throughout its entire value chain. In manufacturing, the company promotes the use of recycled plastics. At the in-house restaurant located in Mizuno's Osaka headquarters, plastic straws have been replaced with environmentally friendly paper straws.

Mizuno's factories and offices are committed to thorough waste separation and recycle plastic waste into solid fuel and various types of equipment. In its retail stores, Mizuno encourages simplified packaging to help reduce waste.

All Mizuno Group directly managed stores worldwide have switched from disposable plastic shopping bags to environmentally friendly paper bags. For items requiring more durable packaging, such as caddie bags and golf clubs, Mizuno is gradually transitioning to more sustainable alternatives. As part of this initiative, some golf club bags now use fabric-based materials.

Additionally, as a member of the local community, Mizuno's Osaka headquarters contributes to waste reduction through activities such as cleaning the Cosmo Square district and collaborating with Kansai University to clean the Yamato River riverbed.

Future Challenges

Mizuno aims to not only reduce emissions generated during its manufacturing process but also reduce its use of packing material and packages, and it aims to do so by planning ahead how it could reduce waste, beginning at the designing stage of its manufacturing process. Up until now, efforts to reduce waste have primarily been made by manufacturing bases.

However, to reduce as much waste as possible, Mizuno will apply what it has learned through such efforts to reducing waste at its non-manufacturing bases that currently generate relatively large amounts of waste.

Mizuno will also encourage Sharp Sangyo Co., Ltd., a group company, to adopt digital manifesting, a technology it has not yet implemented.

Business activities and environmental burden

Business activities and environmental burden (input and output) [*b]

Below are data on Mizuno's input of energy and resources and output of GHG emissions and waste in Japan in the fiscal year 2024. Mizuno strives to enhance the efficiency of its business activities and resource use.

* Data on manufacturing bases in Japan, including Senoh Group bases.

Respect for Human Rights (Policies and Governance Structure)

Management Policy

We respect the Universal Declaration of Human Rights and the labor-related international code of conduct, including labor standards defined in the ILO's fundamental conventions. We also recognize, support, and put into practice essential values expressed in the UN Global Compact's Ten Principles in four areas (human rights, labor, environment, and anti-corruption), which the international community supports and recognizes as globally adopted and agreed universal values.

We comply with all labor-related laws and regulations in the countries where we operate, which cover working hours, compensation, the right to choose and join trade unions, collective bargaining rights, working conditions, and more. Since our founding in 1906, we have adhered to the values of fair play, aiming to create a workplace where individuals are treated with dignity, fairness, and respect, without discrimination based on race, creed, gender, social status, religion, nationality, age, sexual orientation, gender identity, or physical or mental disability. We have established the ["Mizuno CSR Procurement Code of Conduct,"](#) incorporating the perspective of ISO 26000, the international guidance on social responsibility, to communicate our values to suppliers and request that they adhere to these principles.

The Mizuno Code of Conduct for Suppliers has been translated into the language of the respective countries where major factories are located, and we request that they post it so that workers in the factories can understand its content

Formulation of the "Mizuno Group Human Rights Policy"

Since Mizuno initiated CSR audits in 2004, the Mizuno Group has continuously worked on "responsible procurement with due respect for human rights" as a materiality (important issue). However, we had not formulated a policy corresponding to the "Human Rights Policy". As Human Rights Policy is listed as Step 1 in the Guidelines for Respecting Human Rights in Responsible Supply Chains, published by the Ministry of Economy, Trade and Industry in September 2022, we formulated it in April 2023.

In formulating this policy, we based it on the Mizuno Code of Ethics and the CSR Procurement Code of Conduct, which have long articulated our group's approach to compliance with international norms and standards on human rights. The contents of the policy, such as items and wording, were carefully considered with reference to materials from the Ministry of Economy, Trade and Industry, Keidanren, and examples from other companies.

The content of this policy was reviewed not only internally but also by third-party experts, namely lawyers. After drafting and verification in the Sustainability Operations Council, it was approved by the Board of Directors and then announced.

We also strive to communicate this "Human Rights Policy" both internally and externally through training programs organized by the Human Resources and General Affairs Department and briefings hosted by the Legal Office.

We will continue to carry out human rights due diligence in accordance with this policy. If changes in the external environment make it necessary to update the content of this policy, we will discuss it in the Sustainability Operations Council, obtain approval from the Board of Directors, and then disclose the revised content.

[Mizuno Group Human Rights Policy PDF](#) 

[Mizuno Code of Ethics](#)

[Mizuno CSR Procurement Code of Conduct](#) 

Management system

The Cross-departmental Products Committee is responsible for promoting CSR procurement activities. This committee, chaired by the Senior Managing Executive Officer, consists of members selected from the planning and production departments for apparel, footwear, equipment, factory departments, the Quality Assurance Office, and various management departments throughout the company. The committee not only reports on the progress of CSR procurement audits but also discusses promoting compliance with the 'Mizuno CSR Procurement Code of Conduct' and the global response to CSR procurement activities.

Human Rights Due Diligence

The Mizuno Group has been promoting CSR procurement since 2004, based on the belief that “good manufacturing” is not only about producing safe, reliable, and high-quality products, but also about ensuring that human rights, labor, and environmental aspects of the production process meet international standards. We believe that the continuous implementation of CSR procurement contributes to the exercise of human rights due diligence and the prevention of human rights violations.

As the Mizuno group aims to expand its business further globally, we recognize that implementing human rights due diligence with respect for human rights at the forefront is one of the most critical issues, and we formulated the “Mizuno Group Human Rights Policy” in April 2023.

Additionally, to respond to the accelerating legislative trends in Europe, we established the Sustainability Council at our European headquarters in August 2023.

In fiscal year 2024, the Sustainability Council received requests for cooperation in responding to a bid from the Irish military, as well as inquiries regarding the status of human rights due diligence conducted by suppliers producing products sold by Nordic business partners. By responding within the required timeframe to survey items such as certification status of our business sites, certification status of products and materials, and audit implementation status of finished goods factories, we contributed to maintaining strong relationships with our customers.

Multi-Stakeholder Policy

In our corporate management, we have formulated the “Multi-Stakeholder Policy” to appropriately collaborate with a diverse range of stakeholders, including not only our shareholders but also our employees, business partners, customers, creditors, and the local community.

[Multi-Stakeholder Policy](#) 

Materiality

Supply Chain Management

Basic Concept

The Mizuno Group recognizes the importance of supply chain management based on respect for human rights and labor conditions, environmental consideration, and fair business practices. To this end, we have established the “Mizuno CSR Procurement Code of Conduct” and are actively engaged in CSR procurement activities that adhere to this code.

By conducting CSR audits with both domestic and international suppliers under a shared understanding, we not only confirm compliance with laws and regulations, but also assess current practices and initiatives related to human rights, working conditions, occupational health and safety, and environmental protection. In cases where inappropriate practices are identified, we take effective action to resolve and correct them.

The “Mizuno CSR Procurement Code of Conduct” is available in three languages—Japanese, Traditional Chinese, Simplified Chinese, and English—and is distributed to suppliers. In consideration of workers employed at overseas manufacturing sites away from their home countries, we have also prepared translations in the following languages:

Italian, Indonesian, Urdu, Korean, Khmer (Cambodian), Spanish, Thai, German, Turkish, Bulgarian, Vietnamese, Portuguese, Bengali, Malay, Burmese, Lao, Lithuanian, Romanian

Furthermore, to help supplier management and senior staff deepen their understanding of the principles of the “Mizuno CSR Procurement Code of Conduct”, we engage in dialogue with suppliers and support organizational capacity building initiatives—commonly referred to as “capacity building.”

[Mizuno CSR Procurement Code of Conduct](#)

Supply Chain Status

Mizuno manufactures products such as sports shoes, sportswear, and golf clubs at its own factories as well as at contracted factories (suppliers). The main supplier countries, in addition to Japan, include China, Taiwan, Indonesia, Vietnam, Thailand, the Philippines, Myanmar, and Cambodia.

Status of the entire Supply chain

Please refer to our [ESG data](#) for the breakdown of our Tier 1 suppliers by product category, as well as by country and region.

Status of important suppliers

From the perspective of annual transaction amount, occupancy rate, and the importance of procured goods, we categorize suppliers that have a significant impact on our business continuity and business value as important suppliers. Please refer to our [ESG data](#) for the status of these important suppliers (Tier 1 suppliers).

Disclosure on the status of key suppliers:

- Number of key suppliers: 207
- Percentage of key suppliers among all Tier 1 suppliers: 46.9%
- Percentage of total procurement value sourced from key suppliers: 96.5%
- Percentage of key suppliers for whom Mizuno is a major customer: 34.8%

* Key supplier is defined as a supplier whose transactions with Mizuno account for 30% or more of the annual sales

■ Disclosure of Supplier Information

To help stakeholders better understand the status of our supply chain, we have been disclosing a “Supplier List” since fiscal year 2017. The Supplier List includes the following information:

- ①List Supplier name
- ②Location
- ③Country
- ④Product category (Apparel / Equipment / Footwear)
- ⑤Number of employees (Less than 1,000 / 1,000 to 5,000 / 5,001 to 10,000)
- ⑥Parent company
- ⑦Percentage of female employees
- ⑧Percentage of migrant workers
- ⑨Presence of labor union

[List of Major Suppliers](#)

■ Implementation of CSR Procurement Audits and Improvement Efforts Domestically and Internationally

Mizuno's CSR procurement audits cover not only the company itself but also overseas branches, domestic and international subsidiaries, as well as procurement sources of licensees and sales agents. Our CSR procurement efforts include two forms: pre-evaluation conducted before starting transactions with suppliers and regular audits of ongoing suppliers.

CSR evaluation of new candidate supplier factories before the commencement of business

We believe that conducting evaluations before initiating business relationships is essential to ensuring effective CSR procurement. Accordingly, based on the Mizuno CSR Procurement Regulations, we have established a system for conducting CSR preliminary evaluations of new suppliers. For major new candidate suppliers, we carry out assessments prior to the start of production, focusing on human rights, labor practices, occupational health and safety, and environmental impact.

Before conducting a CSR audit, we present the supplier candidates with three documents: the Mizuno CSR Procurement Code of Conduct, the Mizuno CSR Pledge Statement, and the Mizuno CSR Self-Assessment Checklist. If the supplier agrees to the principles outlined, they are asked to sign and submit the CSR Pledge Statement of their own free will. In addition, we provide an explanation based on the Mizuno CSR Procurement Guidelines, which serve as a reference for understanding our CSR procurement approach.

If the audit results fall below the required Evaluation B level (score of 80–89), which is a prerequisite for starting business, we engage with the supplier to discuss a corrective action plan based on the audit report. We also offer guidance and recommendations for improvement, and in some cases, conduct on-site visits. Through these efforts, we ensure that suppliers meet Mizuno's required standards before commencing business, thereby enhancing the effectiveness of our CSR procurement practices.

Flow of CSR evaluation of new candidate supplier factories before the commencement of business

■ Implementation Status for Fiscal Year 2024

In fiscal year 2024, we conducted preliminary evaluations (audits) for new supplier candidates.

The number of suppliers by evaluation grade in the preliminary assessment is shown in the table below.

In recent years, there has been an increasing trend of new supplier candidates who have already undergone assessments by third-party auditing organizations. By reviewing and evaluating the results of audits conducted by these external organizations against Mizuno's standards, we determine whether the new supplier candidates meet the requirements to begin business transactions.

Preliminary Evaluation	Number of Suppliers
Grade A	2
Grade B	—
Equivalent to Grade B or higher based on Mizuno standards applied to third-party audit assessments	18
Total	20

■ Corrective Action When the CSR Audit Result is Below B

If a factory receives a rating below B in the prior evaluation, we provide feedback on the results and discuss specific and feasible corrective and improvement measures with the supplier for the items deemed non-compliant. While respecting the supplier's autonomy in creating corrective and improvement plans, we conduct periodic checks and offer advice as needed, following up until they achieve a rating of B or higher, which is a prerequisite for commencing business.

Audits and Corrective Actions for Tier-1 Suppliers

CSR audits for existing suppliers are conducted under the "Mizuno CSR Procurement Regulations," targeting approximately 200 key suppliers. These audits monitor compliance with the standards outlined in the Mizuno CSR Procurement Code of Conduct on a regular basis, completing a full cycle every three years.

There are two methods of monitoring:

1. Direct audits commissioned by Mizuno and conducted by auditing agencies
2. Evaluations based on assessments conducted by other auditing organizations, reviewed against Mizuno's standards

In fiscal year 2024, including assessments by external auditing organizations, a total of 58 suppliers (4 domestic and 54 overseas) were evaluated. The number of suppliers by evaluation grade based on these results is shown below.

Regular Audit Evaluation	Number of Suppliers
Grade A	16
Grade B	6
Grade D	1
Equivalent to Grade B or higher based on Mizuno standards applied to third-party audit assessments	35
Total	58

The graph below shows the evaluation scores by country for 23 suppliers that underwent direct audits.

Number of audits conducted and Average score by country

CSR audits consist of on-site inspections, document reviews, and employee interviews, and are typically conducted by multiple auditors over one or several days.

To assess compliance, a globally standardized monitoring sheet based on ISO 26000 is used.

Each audit item in the monitoring sheet is classified into three categories—Critical, Major, and General—based on its importance and urgency.

If an item is found to be compliant, points assigned to each category are totaled to quantify the evaluation.

Suppliers are rated using four grades:

A for scores of 90 or above

B for scores between 80–89

C for scores between 70–79

D for scores below 69, or if child labor or forced labor is detected

System for CSR audits and corrective actions

■ Criteria for Determining the Need for CSR Audits Based on Supplier Country

We designate countries with high human rights risks as subject to CSR audits, using the “Worldwide Governance Indicators” published by the World Bank as a reference, along with our own perspectives.

Based on the latest version of these indicators, we conduct annual reviews.

Suppliers located in countries ranked highly in the following six dimensions of the indicators are excluded from audits, in line with the intent of the indicators:

- Voice and Accountability
- Political Stability and Absence of Violence
- Government Effectiveness
- Regulatory Quality
- Rule of Law
- Control of Corruption

Although suppliers located in Japan are generally excluded from audits, we conduct audits for those employing foreign technical intern trainees, as human rights concerns have been observed in such cases.

[Worldwide Governance Indicators](#) 

■ Audit Status for Suppliers Employing Foreign Technical Intern Trainees

As of April 1, 2024, Mizuno had 101 suppliers located in Japan. Among them, 29 suppliers employed a total of 285 foreign technical intern trainees. Of these, 17 suppliers were designated as key suppliers subject to audits, with 188 foreign technical intern trainees working at those facilities.

In fiscal year 2024, four audits were conducted, and all received a Grade A rating. The main nationalities of the foreign technical interns working at these 4 factories were 26 from Vietnam, 5 from China and 5 from Cambodia.

■ Main Monitoring Contents

We conduct monitoring by categorizing audit items into the areas of human rights, labor practices, occupational safety and health, and environmental impact.

In fiscal year 2024, as shown in the table below, some suppliers had items identified as “critical” or “major.” We have provided appropriate advice and recommendations to support corrective actions and improvements.

■ Number and Percentage of Factories with Non-Conformities in Critical and Major Items in Audits (FY2024)

Items	Audit item	Audit Requirements	Number of Critical Items	Number of Major Items	Percentage of Applicable Suppliers (%)
Human Rights	Freedom of Association	Mechanism for resolving worker grievances between the factory and worker representatives		1	4.5
		Method for selecting worker representatives		1	4.5
		Right to form labor unions		2	9.1
	Forced Labor / Slave Labor / Migrant Labor	Contracts involving home-based work		1	4.5
Labor Practices	Compensation	Method of wage payment		1	4.5
		Workers’ social insurance		6	27.3
		Overtime pay		3	13.6
		Wage statements		3	13.6
	Working Hours	Method of recording working hours		1	4.5
		Authorization from labor authorities for extended working hours (overtime)		1	4.5
		Excessive working hours and overtime		10	45.5
		Workers’ access to leave		7	31.8

Items	Audit item	Audit Requirements	Number of Critical Items	Number of Major Items	Percentage of Applicable Suppliers (%)
Safety and Health	Chemical Substances	Safety Data Sheets (SDS) for chemical substances		2	9.1
		Labeling of chemical substances		2	9.1
	Fire Safety	Certificates/permits for building safety		6	27.3
		Emergency exits and evacuation routes		2	9.1
		Fire extinguishers		2	9.1
		Fire inspection certificates/permits		5	22.7
		Signage or indicator lights for exits and emergency exits		8	36.4
		Access to fire extinguishers, fire hydrants, and fire alarms		4	18.2
		Fire safety training		3	13.6
		Locking of emergency exits	1		4.5
		Direction of emergency exit door opening	3		13.6
	Dormitories	Location of dormitory facilities	1		4.5
	Work Environment	Periodic health checkups for workers exposed to hazardous environments		4	18.2
		Regular health checkups		1	4.5
		Provision of personal protective equipment (PPE)		7	31.8
Environment	Pollution Preventio	Monitoring of noise impact on local communities (noise measurement at boundaries)		2	9.1
		Monitoring of exhaust gas emissions		3	13.6
		Waste storage areas		5	22.7
		Transportation and disposal of waste		3	13.6
		Monitoring of wastewater discharge		3	13.6
		Management of discharge limits for pollutants in discharged wastewater/sewage		1	4.5
	Management Systems	Environmental permits		4	18.2

■ Details of Non-Compliance Related to Human Rights

In recent years, with the remarkable rise in human rights awareness, cases of suppliers suppressing employee rights have become increasingly rare. Under these circumstances, five human rights-related issues were identified during audits conducted in FY2024. Of these, four cases involved the following: Absence of mechanisms for receiving and addressing employee complaints and grievances, Inadequate or unreasonable methods for selecting employee representatives, Partial interference in the process of forming employee unions. As of the end of March 2025, these issues had not yet been corrected, and each supplier is currently working on remediation. Additionally, one case involving deficiencies in contracts with home-based workers was identified domestically. This issue has already been corrected, and remediation has been confirmed.

■ Non-Compliance Issues Other Than Human Rights

In fiscal year 2024 audits, non-compliance issues unrelated to human rights were identified in the areas of “occupational safety and health” and “labor practices”.

Specific cases are shown in the table below.

Audit Category	Specific Non-Compliance Case	Number of supplier	Percentage of Applicable Suppliers (%)
Occupational Safety and Health	Are adequate guards or devices installed for moving/rotating parts of machine, pulleys and belts or any other dangerous parts of machines?	11	50.0
Labor Practices	Does the working hour of factory meet law requirements?	10	45.5
Occupational Safety and Health	Are exits and fire exits identified with sign or indicator lamps?	8	36.4
Occupational Safety and Health	Are adequate first aid kits located at each factory floor and marked with signs?	8	36.4
Occupational Safety and Health	Are dangerous/ hazardous substances safely and securely stored? And is fire-extinguishing equipment appropriate there?	7	31.8
Occupational Safety and Health	Is personal protective equipment (PPE) in fully acceptable condition provided for workers?	7	31.8
Labor Practices	Are workers available to take one day off in seven?	7	31.8
Occupational Safety and Health	Are all site buildings structurally safe, inspected and have certificate/license issued by local government authority?	6	27.3
Occupational Safety and Health	Are adequate emergency lights installed at each factory floor?	6	27.3
Labor Practices	Are all workers provided social insurance met local legal requirements?	6	27.3

■ Correction Status of Non-Conformities

In the CSR audits conducted in fiscal year 2024, a total of 51 critical or major non-conformities were identified. As of the end of March 2025, corrective actions had been confirmed for 40 of these cases (78%).

It is worth noting that during the fiscal year, there were no instances in which business relationships were terminated due to suppliers failing to meet the evaluation grade required for continued transactions.

For details on the correction status of non-conformities, please refer to the [ESG data](#).

Response to Secondary and Tertiary Suppliers

For our primary suppliers, with whom we have direct business relationships, we focus on understanding and managing human rights, labor, and environmental impacts. We request improvements and corrections as necessary to build a better supply chain.

Additionally, for secondary and tertiary suppliers—those who do not have direct business relationships with us but supply raw materials, components, semi-finished products, or labor to our primary suppliers—we strive to identify any potential concerns by collecting information through our primary suppliers.

Since FY 2017, we have expanded the scope of our audits to include secondary and tertiary suppliers. The main targets include plating factories for golf iron heads and tanning factories for leather used in baseball gloves and shoes.

Details of our actions taken each fiscal year are provided below.

FY	Actions Taken
2017	We conducted audits of two suppliers involved in golf component manufacturing. In addition, to better understand the actual working conditions at secondary and tertiary suppliers outside of component manufacturing, we visited the production sites of a metal processing facility in Japan and a fabric dyeing facility in Thailand.
2018	We conducted CSR audits of suppliers involved in golf club component manufacturing and plating processes for golf clubs in China, leather tanning in Vietnam, upper (vamp) manufacturing for shoes, and rubber outsole manufacturing for shoes.
2019	We conducted audits of suppliers involved in golf club component manufacturing, as well as upper (vamp) and sole manufacturing for shoes. Among these, non-conformities were identified during audits of suppliers engaged in golf component manufacturing, sole production, and upper (vamp) processing.
2020	We conducted follow-up audits of suppliers where non-conformities had been identified in FY 2018 and FY 2019, and confirmed that the issues had been corrected. Additionally, we conducted audits of suppliers involved in golf club manufacturing.
2022	We conducted an audit of a supplier involved in golf club component manufacturing and identified non-conformities. As a result, we scheduled a follow-up audit for FY 2023.
2023	We conducted a follow-up audit of a supplier involved in golf club component manufacturing, where non-conformities had been identified during the FY 2022 audit, and confirmed that the issues had been corrected. We also reviewed the transaction status of secondary and tertiary suppliers in the apparel, footwear, and equipment categories, as well as the necessity of future audits. Based on this review, we considered future management approaches.
2024	In relation to product procurement by our U.S. subsidiary, we investigated the first- to third-tier suppliers to ensure compliance with U.S. customs regulations and the Uyghur Forced Labor Prevention Act. As a result, we confirmed that no procurement was made from suppliers banned by U.S. Customs and Border Protection.

* We were unable to conduct audits in fiscal year 2021 due to preventive measures against the spread of COVID-19.

Activities Beyond CSR Audits

In Southeast Asia, where many of our suppliers are located, rapid economic growth has led to increased risks of environmental issues and labor disputes. Under such evolving social conditions, correcting non-conformities identified through CSR audits alone is no longer sufficient to address fundamental human rights, labor, and environmental challenges.

Therefore, we believe it is necessary to place greater emphasis on capacity building for suppliers as part of our activities beyond CSR audits.

As a foundation for this approach, we have strengthened internal education efforts. These include broad, general programs for all group employees, as well as targeted programs focusing on specific issues and themes for executives, managers, and employees assigned to overseas offices. Through these initiatives, we aim to raise awareness and understanding of the significance and importance of CSR procurement.

In fiscal year 2024, we held discussions with employees of our U.S. subsidiary regarding the role they should play as representatives of the brand when engaging with suppliers.

Additionally, Mr. Tomohiro Tsukada, an attorney at Mori Hamada & Matsumoto LPC, who supports companies across industries in addressing business and human rights issues, interviewed us about Mizuno's initiatives. The content of this interview was featured in the first article of the series "Essence of Initiatives from Practical Perspectives on Business and Human Rights" in NBL (New Business Law), a magazine published by Shojihomu Co., Ltd., which bridges economics and law.

Efforts to Eliminate Child Labor

Sports products such as apparel and footwear are often manufactured in the Asia-Pacific region, where wage levels for workers tend to be relatively low. It has been pointed out that, for various reasons, the risk of child labor may increase in the future. Therefore, we consider child labor to be one of the most critical items in our audit process and recognize the need for enhanced monitoring in the Asia-Pacific region, where many of our suppliers are located.

We have clearly stated our commitment to prohibiting child labor in the Mizuno Code of Ethics, and in the Mizuno CSR Procurement Code of Conduct, we require suppliers to respect the following two core labor standards established by the International Labour Organization (ILO):

- The Minimum Age Convention (No.138)
- The Worst Forms of Child Labour Convention (No.182)

In addition, to identify countries and regions with a high risk of child labor, we utilize the previously mentioned Worldwide Governance Indicators to classify countries where audits are necessary and those where they are not.

Respect for Human Rights

In the Asia-Pacific region, alongside child labor, forced labor—often referred to as “modern slavery”—also requires close monitoring.

In Japan, according to a survey by the Ministry of Health, Labour and Welfare as of the end of October 2024, there were approximately 2.3 million foreign workers, including around 470,000 technical intern trainees. The number of workplaces employing foreign workers was reported to be approximately 340,000.

Many of the suppliers from whom we procure products employ foreign workers under the Technical Intern Training Program. The treatment of these trainees has become a social issue due to concerns over human rights and working conditions. For this reason, our CSR staff conduct on-site audits of suppliers employing technical intern trainees.

Additionally, as a member of the JP-MIRAI Platform for Responsible Acceptance of Foreign Workers, we aim to support employers in fulfilling their responsibilities in line with the internationally recognized Platform Principles of Action.

* JP-MIRAI provides foreign workers with useful information and consultation support for daily life and employment. For companies employing foreign workers, it offers mechanisms and resources—such as grievance mechanisms, which serve as effective tools to complement CSR audits—that help identify potential issues in the supply chain at an early stage.

[For more details on the actual conditions of audit target factories employing foreign technical interns, please refer to this document.](#)

■ Compliance with Overseas Laws and Regulations

We comply with laws and regulations in various countries and regions that require companies to disclose efforts to eliminate human trafficking and forced labor. In line with legislation promoting respect for human rights, we disclose relevant information in accordance with the “California Transparency in Supply Chains Act (effective since 2012)” in the United States and “the UK Modern Slavery Act (effective since 2015)”.

Efforts Regarding Conflict Minerals

■ What Are Conflict Minerals?

Conflict minerals refer to mineral resources mined in conflict-affected areas such as the Democratic Republic of the Congo (formerly Zaire) and surrounding African countries. In these regions, local residents and forcibly taken individuals are often subjected to threats and violence, and forced to work under harsh conditions, resulting in serious human rights violations.

Minerals extracted under such circumstances are known to serve as financial sources for armed groups and criminal organizations, making this a significant global issue.

One of the key regulatory frameworks addressing conflict minerals is the “Dodd-Frank Wall Street Reform and Consumer Protection Act” in the United States. Section 1502 of this law defines four minerals—tin, tantalum, tungsten, and gold (collectively referred to as “3TG”)—as regulated conflict minerals. Companies listed in the United States are required to report to the U.S. Securities and Exchange Commission (SEC) whether they manufacture or contract to manufacture products containing these minerals, and if so, to disclose relevant information on their websites and other public platforms.

■ Efforts Regarding Conflict Minerals

Although we are not listed on the U.S. securities market and therefore not subject to reporting and disclosure requirements to the SEC, we believe that ensuring transparency in our supply chain is essential for responsible sourcing. Accordingly, we began investigating the use of conflict minerals—tin, tantalum, tungsten, and gold (collectively referred to as “3TG”)—in 2018, in line with the Dodd-Frank Act.

Specifically, tungsten is used as weights for balancing golf club heads and soft tennis rackets, as well as in the tips of ultra-hard spikes for baseball shoes. Tin and gold are used in plating for various metal products. We have confirmed that these minerals are not sourced from conflict-affected regions.

Since fiscal year 2022, we have conducted investigations into the tungsten used in golf club heads using the “Conflict Minerals Reporting Template (CMRT)” provided by the “Responsible Minerals Initiative (RMI)”. Through this process, we have identified all smelters involved and confirmed that they are listed as “Conformant Tungsten Smelters” under RMI.

Smelters listed in RMI’s conformant list have undergone audits under the “Responsible Minerals Assurance Process (RMAP)”, which verifies that their mineral sourcing practices are free from illegal activities related to conflict minerals.

In parallel with CMRT-based investigations, we have also implemented traceability measures for tungsten used in golf products, creating a supply chain map to ensure transparency in sourcing routes. We request our suppliers not to use minerals from non-conformant smelters.

* RMI was established in 2008 and has over 400 member companies. It develops tools and resources to support responsible mineral sourcing throughout the supply chain.

Future Challenges

As our business continues to grow and expand, the risk of disruptions to stable product supply is also increasing. To maintain a reliable supply of products, it is essential to diversify production sites and reduce dependence on specific countries or suppliers. This will likely lead to an increase in procurement from suppliers located in new countries and regions. Accordingly, it is becoming increasingly important to conduct thorough and precise evaluations of potential new suppliers, including pre-assessments.

Furthermore, we believe it is crucial to ensure that any issues identified through CSR procurement audits are properly addressed and do not recur. We will continue our efforts to ensure the integrity of our supply chain and remain committed to responsible procurement practices.

Product Safety and Quality (Policies and Governance Structure)

Management policy

Mizuno Quality Policy

We have established the Mizuno Quality Policy based on our corporate philosophy. All employees comply with the Mizuno Quality Policy and strive to provide safe and superior products and services.

Mizuno Quality Policy

In order to gain the trust and satisfaction of customers, MIZUNO Corporation. and its group companies are committed to providing superior products and services, offering accurate information and humbly listening to customers' comments and continuously promoting the following initiatives.

- We provide attractive, high-quality products and services that satisfy customers.
- We will strive to provide, maintain and improve products of safe and appropriate quality.
- We will provide accurate quality information in accordance with internal and external rules.
- We will humbly listen to customers' comments and reflect them in improving the quality of our products and services.
- We will comply with relevant laws, regulations, and internal regulations, and respect social demands.
- We will review the quality assurance system regularly to ensure continuous improvement.

Important policies and initiatives relating to quality are discussed and decided at the quality assurance meeting, which is chaired by the officer in charge of quality assurance. The quality assurance meeting is held regularly every six months. In the meeting, each department sets their quality targets and the initiatives to achieve these targets and works towards accomplishing them. Rules are established for conducting design reviews and inspections, which are implemented across all Mizuno products. The three product divisions that are responsible for production and manufacturing—the Global Footwear Product Division, the Global Apparel Product Division and the Global Equipment Product Division— and Mizuno Technics Corporation and Senoh Group, which are members of the Mizuno Group, hold quality control meetings on a regular basis in an effort to verify the quality control situation, discuss measures for preventing defects, and ensure that these measures are thoroughly implemented. To ensure good quality, the Quality Assurance Office organizes quality workshops so that all Mizuno employees can have numerous opportunities to take part in workshops. To ensure quality, the Quality Assurance Office organizes numerous quality workshops for all employees.

Sustainable Materials Procurement Policy

Our Integrated Value Creation Stories consist of three frameworks: “The strengths of Mizuno,” “Mizuno's business field,” and “Social value provided by Mizuno.” For “Social value provided by Mizuno,” we have been striving to fulfill our CSR in order to respond to the expectations of our stakeholders. We will take on the challenge to contribute to sustainability and the SDGs through new business development that exceeds their expectations.

To this end, we have set the Sustainable Materials Procurement Policy as a concrete policy to address our materiality “Responsible procurement with due respect for human rights” and “Responsibility for the global environment through product lifecycle” identified together with “Responsibility for safe and high-quality products” and “Responsible business practices.” We will formulate guidelines for each material in the company and use them for our product manufacturing. Reviewing these guidelines, if necessary, we will contribute to our manufacturing that helps to increase the social value provided by Mizuno.

We promote the use of sustainable materials, taking into account the impact that the materials we use may have on society and the environment.

- Sustainable Materials Used by Mizuno
- We strictly manage hazardous chemical substances that may remain in products through the Mizuno Restricted Substances List (RSL), ensuring that no harmful substances are present in our products.
- For synthetic fibers, we aim to increase the proportion of recycled materials and adopt processing methods that reduce water usage during the dyeing process.
- Regarding animal-derived materials, we do not use real fur, nor do we use leather from endangered or rare species. We strive to improve the traceability of natural leather, feathers used as filling for clothing, etc. by procuring them from suppliers certified by industry associations.
- The maple and white ash wood used in our baseball bats is sourced from North American producers who are committed to forest conservation.
- We do not use so-called conflict minerals in our metal materials.
- For hang tags used in apparel and other products, we use recycled paper or environmentally friendly materials.
- All major shoe boxes are made from 100% recycled paper, and the printed logo uses water-based ink that is environmentally friendly.

Management system

We have established the following four rules to manage a quality policy and ensure product quality in each process, from planning to sales.

■ Quality Assurance Regulations

As overall quality management of Mizuno Corporation and its group companies [*c]*, we have set compliance rules for ensuring product quality and safety, including the establishment of a quality policy and a quality system and the implementation of educational training on product quality.

* Mizuno Group companies in Japan (excluding the Senoh Group and Sharp Sangyo Co., Ltd.)

■ Design and Development Regulations

With the aim of clarifying the work performed by the division in charge of design and development and carrying it out smoothly, we have established procedures for developing materials and parts, designing the structure and specifications of products, evaluating these materials and products, and checking their quality before shift to full-scale production.

■ Manufacture Control Regulations

The Manufacture Control Regulations have been established to ensure product quality by clarifying work procedures and control methods for maintaining product quality in the manufacturing process. These regulations apply to the manufacturing processes of all products handled by us and persons in charge of these processes. They state that the responsibility for controlling the in-house manufacturing process lies with the head of the product division in charge of producing and manufacturing the relevant products and that the responsibility for managing suppliers lies with the head of the division in charge of purchasing the relevant products.

■ Customer Service Regulations

We have clarified the procedures for selling to customers and responding to customer requests after sales and have established a system for determining the cause of requests and preventing their recurrence. We deal with customer requests promptly and reliably to gain customer satisfaction and trust, and work to increase and improve customer satisfaction.

Based on these regulations, each product division strives to ensure higher quality by establishing and enforcing its own rules and procedures for its products to respond to customer requests in more detail. We also conduct a regular maintenance of documents related to product quality and revise or withdraw them, or establish new documents as needed.

■ Flow of quality control and assurance from planning to sales

■ Quality control system chart

Materiality

Ensuring of the safety and quality of products

Basic Concepts

Mizuno believes that ensuring the appropriate quality of our products and services is a critical responsibility, in order for our customers to use them with safety and confidence. We also consider it vital to provide sufficient information to assist our customers in making informed product choices, to respond to various feedback we receive, and to leverage these insights for continuous improvement. We continue to cherish the words of our founder, Rihachi Mizuno, "Create the best products for customers," which serve as a fundamental principle underpinning Mizuno's commitment to craftsmanship. We remain dedicated to maintaining and enhancing our product quality.

System for product safety and quality control

We conduct various reviews and inspections to ensure product safety and quality. During these reviews, we examine a wide range of quality-related aspects, including product design, materials used, safety during use, and labeling.

Before starting production of new products, we carry out design reviews based on a checklist to verify structural, material, and technical elements. After manufacturing, we perform pre-shipment inspections to ensure that no defective items are included before products are shipped from the factory.

We ensure the quality of all products in accordance with product specifications and material quality standards created for each item. These standards are based on the laws, regulations, and guidelines of each country, as well as Mizuno's accumulated manufacturing expertise and customer feedback.

Design Review (DR) Implementation Plan by Product Design and Development Division

For products designed and developed by the Global Equipment Product (hereinafter referred to as "EPD") Development Section and Mizuno Technics Co., Ltd. (hereinafter referred to as "MT").

Since many of our products are manufactured at external subcontracted factories under OEM agreements, ensuring product quality at these sites is also essential.

Before entering into a new OEM contract, the responsible personnel from each product division assess the factory's quality capabilities to ensure that it can produce products that meet our specified standards. We only sign OEM contracts with factories that meet our criteria.

For existing partner factories, we conduct regular QC patrols, visiting facilities that produce major items to check their quality control status and provide guidance. In fiscal year 2024, we continued these efforts through on-site visits and web conferencing systems, conducting QC patrols and QA audits at overseas manufacturing sites.

Additionally, at regularly held QC meetings, we review product quality in the market and thoroughly discuss and implement measures to prevent recurrence of any defects.

In the event of a serious defect, we report it to relevant authorities such as the Ministry of Economy, Trade and Industry and the Consumer Affairs Agency. If necessary, we issue public notices and voluntarily recall affected products to prevent further distribution of defective items.

No serious defects requiring public announcements via newspapers or other media have occurred since FY2005.

In fiscal year 2025, we will continue to strengthen our global quality assurance system and develop human resources to deliver safe and high-quality products.

QA Audit

QA Audit

QC Meeting

Corporate QA Meeting

■ Use of quality function deployment (QFD) at the time of development of new products

When developing new products, Mizuno conducts quality reviews using Quality Function Deployment (QFD), as prescribed in the JIS standard "Performance Improvement of Management Systems – Guidelines for Quality Function Deployment" (JIS Q 9025:2003). QFD is defined as a methodology that employs various transformations and deployments to achieve product quality objectives.

As part of the QFD process, we create a Quality Function Deployment Diagram, which consists of:

- a Required Quality Deployment Table, where customer-required functions are broken down into three stages, and
- a Quality Characteristic Deployment Table, which outlines quantitatively measurable characteristics necessary for designing the required quality.

This diagram clarifies the relationship between customer needs and quality characteristics, ensuring that the required quality is effectively incorporated into product design.

While QFD has been introduced in the development of selected products, we plan to expand its application to a broader range of products and services. This includes enhancing the intangible aspects of products and developing exercise programs delivered through our products.

* QFD (Quality Function Deployment)

■ ISO 9001 certification

The Mizuno Group has acquired and continuously maintained ISO 9001 certification, the international standard for quality management systems, to ensure product safety and quality.

Year of acquisition	Company certified ISO 9001
2001	Senoh Corporation
2004	Shanghai Mizuno Corporation Ltd.

	Taiwan Mizuno Corporation

Management of Restricted Chemical Substances in Products

To ensure the safety and appropriate quality of its products, Mizuno has established and operates under the Chemical Substances Control Regulations, which define the requirements for managing restricted chemical substances in the products we manufacture and sell.

Based on these regulations, we compile a list of chemical substances*¹ that are banned or restricted under national laws and regulations, along with their permissible limits, and conduct investigations and verifications before commercializing any product.

The Quality Assurance Office and Legal Office develop the necessary rules and procedures for chemical substance management and support the activities of each product division—Footwear, Apparel, and Equipment.

Depending on the types of chemical substances that may be used, we require suppliers to submit chemical substance survey forms and/or written pledges confirming compliance with our standards.

In addition, we conduct sampling inspections*² of certain products and materials through third-party testing organizations to verify their safety.

If any substances of concern are identified in survey reports or analysis results, we request suppliers to reduce environmental impact. We also propose improvements to ensure proper handling of chemical substances at subcontracted production sites and recommend switching to substances with lower environmental impact.

*¹ Representative examples of high-risk restricted chemical substances include those specified in the Stockholm Convention (POPs), Class I Specified Chemical Substances under Japan's Act on the Evaluation of Chemical Substances and Regulation of Their Manufacture, substances regulated under the Act on Control of Household Products Containing Harmful Substances, and those listed in Annexes XIV and XVII of the EU REACH Regulation.

*² Examples of inspections include tests to confirm the absence of specific azo dyes that generate designated aromatic amines, and compliance verification with the EU REACH Regulation for products intended for the European market.

■ Participation in the Apparel and Footwear International RSL Management Group (AFIRM)

In January 2019, we joined the Apparel and Footwear International RSL Management Group (AFIRM)*, an international organization that manages the Restricted Substances List (RSL), to simplify the operation of restricted chemical substances and strengthen the management of them.

Based on information from AFIRM, we have created a restricted chemical substances list, which meets the international standards, to manage the risk of chemical substances remaining in products in the supply chain. We will also promote information sharing and collaboration within the industry to improve compliance.

In cooperation with ASICS Corporation, we have unified the names of restricted chemical substances in Japanese. This can be expected to facilitate the management of restricted chemical substances in the supply chain in Japan. We have also jointly created the Japanese version of various materials issued by AFIRM and have published them on the AFIRM website. These materials can be viewed and used freely also by any non-member of AFIRM. We will continue to contribute to improving the management level of residual chemical substances in products in Japan.

We have created the Mizuno Restricted Substances List, which meets the international standards, based on AFIRM materials. It consists of two lists, a restricted substances list for products and a restricted substances list for product packages.

In fiscal year 2024, we created the Mizuno Restricted Substances List 2024 and distributed it to our suppliers.

* AFIRM: Apparel and Footwear International RSL Management Group (RSL=Restricted Substances List)

Representative member companies of AFIRM: adidas, Amazon, ASICS, Descente, Decathlon, Esprit, Fast Retailing, Hugo Boss, Lacoste, New Balance, NIKE, Inc., Pentland, PUMA, Skechers, and Under Armour (The company names follow the notation on the official website of AFIRM (<https://afirm-group.com/members/>))

Commitment to enhancing employee awareness

■ Providing education on quality

Mizuno believes that the safety and quality of Mizuno products depend on the awareness and conduct of each employee of the Mizuno Group. Mizuno has formulated the Mizuno Quality Education Outline with the aim of helping the spirit of founder Rihachi Mizuno, best expressed in his own words as "Create the best products for customers," firmly take root inside the company. Following this outline, we also intend to build a system for systematically and unfailingly providing employees with training on quality control. Mizuno believes that quality control is something that must be undertaken by the Mizuno Group as a whole, not just one specific division.

Quality Assurance Office carries out company-wide quality education and department-specific quality education conducted in each department.

Major training courses on quality control [*d]

Company-wide Quality Control Course	
Content	Acquisition of basic knowledge regarding quality control rules.
Target Audience	Product divisions, development departments, business units, sales departments, indirect departments, and group companies.
Achievements	In FY2024, we held two training sessions under the theme of "Customer Response Education," with a total of 473 participants. Thanks to the introduction of a recorded viewing format since FY2021, participants from various departments across domestic offices were able to take part.
Study Course for the QC Test	
Content	To promote self-development aimed at improving quality control skills and problem-solving capabilities, training programs are conducted at Mizuno Corporation, Mizuno Technics Corporation, Senoh Corporation, and Sharp Sangyo Co., Ltd.
Target Audience	Product divisions, development departments, business units, sales departments, manufacturing departments, etc.
Achievements	As of March 2025, 320 employees currently hold QC certification.
Product Division Quality Control Education Course	
Content	Each of the three product divisions organized training sessions to enhance specialized knowledge related to quality.
Target Audience	Personnel in charge of planning, production, sourcing, and development within the product divisions.
Achievements	In FY2024, a total of 119 sessions were held, with 2,467 participants. Training was conducted through a combination of in-person sessions, online delivery, and recorded video viewing, allowing employees to gain expertise in the products they are responsible for.

■ Mizuno Technics Corporation – Framework for Enhancing Product Quality

The manufacturing technologies and expertise of Mizuno Technics Corporation are highly trusted by professional athletes and teams. To continue meeting their expectations, it is essential for each employee to further develop their skills and ensure the transfer of technical know-how. To support this, Mizuno Technics has established and operates a quality enhancement framework based on ISO 9001.

1. Quality Management System (QMS) Promotion Committee

Held every two months, this committee provides reports and training on QMS-related topics to QMS promoters appointed from each department.

2. Mizuno Technics Quality Education Program

An annual plan is developed by the Quality Assurance Section, which prepares the training materials. In fiscal year 2024, a total of 7 sessions comprising 15 classes were conducted, with a cumulative total of 2,800 participants.

■ Quality Month Initiatives

Mizuno designates each November as Quality Month and conducts various quality-related activities for all employees across the Group. In fiscal year 2024, we held a photo contest related to quality, which attracted 136 participants, and delivered a training program on customer support, with 509 participants. In total, 645 employees took part in these activities.

These initiatives provide employees with an opportunity to reflect on the quality of our products and services, contributing to continuous quality improvement and enhanced customer satisfaction.

Passing Down Skills to Ensure Product Quality

Mizuno's commitment to quality is supported by continuous improvement initiatives at Mizuno Technics Corporation, which is responsible for manufacturing many of our products.

While many sporting goods are produced overseas, we remain committed to manufacturing in Japan. This approach enables us to pursue high-mix, low-volume production, allowing us to produce and supply a wide variety of products in the necessary quantities. It also helps us respond to market globalization, increasingly personalized consumer needs, and rapidly changing trends in the digital age.

We develop Standard Operating Procedures (SOPs) and use them as the foundation for training workers. This supports the development of multi-skilled personnel—employees capable of performing multiple tasks—and helps improve productivity through the thorough elimination of waste. These efforts are aimed at cultivating skilled manufacturing professionals.

In addition, the presence of master craftsmen (Meisters) who create equipment to support athletes plays a vital role in passing down the founding philosophy of “Create the best products for customers”, rooted in the spirit of our founder.

Future Challenges

- We will continue to improve the accuracy and efficiency of various reviews to prevent the occurrence of defective products.
- To respond to the diversification of products and the increasing complexity of the supply chain resulting from entry into new markets, we are considering the development of a more flexible quality assurance system.
- In response to the global trend toward stricter chemical substance regulations, we are working to build a global quality assurance system in collaboration with our overseas group companies.
- To ensure the delivery of safe and high-quality products, we will continue to provide quality-related education opportunities that accommodate diverse working arrangements.

Materiality

Communication related to products

Basic Concepts

For the use of sports equipment, it is crucial for customers to use them properly and to have safety awareness when playing sports. At Mizuno, we strive to avoid using specialized terms in our instruction manuals as much as possible, instead opting for easy-to-understand explanations with illustrations, to communicate information about safe handling to our customers.

Provision of product information

Mizuno believes that it is important to provide sufficient product-related information to help customers make appropriate choices. In addition to labeling on products and instruction manuals, we actively disclose product information through in-store POP materials and our website. We ensure that all disclosed information complies with relevant laws, regulations, and industry standards related to labeling. In accordance with our labeling management regulations, we verify the accuracy and appropriateness of the content. Specifically, when describing the superiority of a product, we use accurate and easy-to-understand expressions to avoid any misunderstanding. When expressing functionality, we require supporting documentation such as test or experiment results.

If disclosure of information related to material procurement is necessary, we provide it through instruction manuals or product information. Material procurement is guided by our “Sustainable Material Procurement Policy,” which is based on the materiality themes of “Responsible procurement with respect for human rights” and “Responsibility for global environmental issues throughout the product lifecycle.” These guidelines are applied to each material in product development and are revised as needed.

Regarding product disposal, our instruction manual creation guidelines clearly state: “For products requiring special disposal methods (e.g., those containing substances harmful to human health or the environment), specify appropriate disposal methods, disposal procedures, and relevant organizations. For other products, follow the disposal regulations of the local government. Instruction manuals are revised in accordance with these guidelines whenever updates are made.

We operate a workflow-based application system that enables all relevant departments—including the Quality Assurance Office and Legal Affairs Office—to effectively and efficiently review and evaluate content. We are also developing a system for pre-application self-checks to reduce errors before submission. For functional claims, we have created an internal Excel-based review tool that allows applicants to verify the appropriateness of expressions before submitting. By utilizing familiar tools in daily operations, we aim to prevent misleading representations.

In fiscal year 2024, one product recall was conducted due to labeling deficiencies. The issue was identified, and the relevant processes were reorganized.

Communication Regarding Defective Products and Recalls

When defective products are identified, Mizuno promptly and accurately announces the issue on its official website. In fiscal year 2024, four such announcements were made. All cases were related to violations of our voluntary standards. Of these, one case involved labeling issues, while the remaining three were related to other matters.

■ Total number of cases announced as an “Important Notice Regarding Mizuno Products” on the website due to product defects, incorrect quality display, or other reasons

Communication for the safe use of products

For the use of sports equipment, it is essential for customers not only to use it properly but also to maintain safety awareness when engaging in sports. Mizuno provides product information to customers through various means, including catalogs, instruction manuals, advertisements, news releases, in-store flyers, and customer support via the Mizuno Customer Service Center.

To convey information on safe handling as clearly as possible, our instruction manuals are designed to minimize the use of technical terms and include easy-to-understand illustrations.

We also analyze inquiries received by the Mizuno Customer Service Center and take appropriate measures, such as adding instruction manuals to products that are found to be difficult to understand.

On the User Support page of our website, we have established sections such as “FAQ about Mizuno Products” and “Useful Information,” where we post frequently asked questions and share tips on product selection and care, categorized by product type—such as shoes and sportswear—and by sport.

For products that may lead to accidents if handled incorrectly, we provide more specific usage instructions, including labeling based on the Product Liability Act and other necessary safety information.

[Please click here for the website “User Support.”](#)

■ Industry Initiatives for the Safe Use of Products

While individual instruction manuals are provided with each pair of sports shoes, Mizuno has taken further steps to promote longer and safer use of these products. We have worked with JASPO (Japan Sporting Goods Association) to develop a shared leaflet titled Sports Shoes Guidebook, which is used by 11 member companies of JASPO. The contents of this guidebook are also available on Mizuno's website.

This guidebook provides easy-to-understand explanations, including illustrations, covering important points such as precautions for use, tips for trying on shoes before purchase, guidance on selecting the right shoes, how to properly put on and take off shoes, and advice for long-term use.

Updating Product Descriptions Based on Customer Feedback

In response to the increasing number of purchases made through our official e-commerce platform, we are continuously reviewing and updating product descriptions. This includes addressing unclear expressions and adding information that may help customers better understand our products.

To ensure that customers can make informed purchasing decisions, we actively extract and incorporate feedback received from them as a reference for these updates.

Future Challenges

- To provide customers with timely and appropriate information, we will enhance internal training so that each employee can acquire a solid understanding of the basics of product labeling.
- We will continue to maintain the “Frequently Asked Questions” section of the Customer Service Center on our website in a timely manner to ensure that the latest information is always available.
- In fiscal year 2024, customer inquiry channels were divided among DTC, owned e-commerce, RT stores, and the Customer Consultation Center. Recognizing the benefits of coordinated customer support across these departments, we have taken steps toward system integration. We will continue to promote initiatives that enable efficient collaboration going forward.

Engagement with Customers

Basic Concepts

Mizuno has declared its commitment to comply with the Complaint Management System ISO 10002* to ensure the safety and quality of its products and services. The company has established the following “Customer Response Policy” and has been working across the entire organization to become a company that satisfies and earns the trust of its customers.

Customer Response Policy - Policies for Customer Satisfaction

- 1. We provide attractive, high-quality products and services that satisfy our customers.
- 2. We provide accurate quality information in accordance with internal and external rules.
- 3. We humbly accept customers’ “voices” and reflect them in the improvement of our products and services.

Currently, we are committed to customer-oriented responses in accordance with ISO 10002:2018 (JIS Q 10002:2019), as well as our internal Quality Assurance Regulations and Customer Response Regulations. Since our founding on April 1, 1906, Mizuno has continued its business with deep appreciation for the support of our customers. Guided by our corporate philosophy—“Contributing to society through the advancement of sporting goods and the promotion of sports”—we will continue to promote customer service activities that aim to ensure customer satisfaction.

* ISO 10002: An international standard for complaint management systems, outlining the processes organizations should have in place to handle customer complaints.

System for customer service

A variety of kinds of feedback from customers is collected at the Mizuno Customer Service Center, where we respond to inquiries and service complaints in cooperation with the relevant departments. Product complaints are forwarded to the Quality Assurance Section, which in turn provides feedback on them to the relevant departments as important information necessary to improve products and systems. The Quality Assurance Office, which consists of the Mizuno Customer Service Center and the Quality Assurance Section, is responsible for building the quality management system and also serves as a liaison to customers.

Customer feedback and major actions

In fiscal year 2024, approximately 24,000 inquiries were received by the Mizuno Customer Consultation Center. Of these, around 52% were product-related questions, and approximately 17% were classified as “requests.”

* Starting in fiscal year 2024, the term “requests” refers to a combination of product complaints, service complaints, and repair inquiries.

Details of calls from customers in FY 2024

Breakdown by Inquiry Category

Breakdown by Sports Category

Internal Sharing of VOC (Voice of Customer)

The Mizuno Customer Service Center receives a wide range of feedback from customers, including requests, words of appreciation, and occasionally critical opinions. These valuable voices are shared internally through our company website and posters.

We regularly hold discussions with the product department to exchange ideas on how to improve based on customer feedback. Each employee remains mindful of the customer's perspective and continues working to deliver better products and services.

Responses in the event of a product accident

In the event of a product-related accident, we take prompt and appropriate action in accordance with our Customer Response Regulations. To ensure that accident information is quickly shared among relevant internal departments, we have revised the circulation flow of our accident report database.

The Quality Assurance Office thoroughly investigates the details of each incident and consults or reports to relevant authorities such as the Consumer Affairs Agency, the Ministry of Economy, Trade and Industry, JASPO (Japan Sporting Goods Association), and NITE (National Institute of Technology and Evaluation), ensuring swift and appropriate responses.

Even when a defect is discovered that may potentially lead to a product accident, we promptly determine and implement preventive measures to avoid any incidents.

[Please click here for details of the Customer Service Regulations.](#)

Future Challenges

In recent years, inquiries from overseas customers have been increasing. However, Mizuno has not yet established a fully adequate support system, and there are still areas that require improvement. We will continue working to build a structure that provides better service and greater customer satisfaction, both domestically and internationally.

Through our internal system for sharing customer feedback, we will strive to deliver products and services that reflect a customer-centric perspective.

We are also working to rebuild our customer support system to accommodate various communication tools.

In addition, to protect employees from "customer harassment" caused by difficult or malicious customers, we have established a group-wide "Customer Harassment Response Policy". Moving forward, we will further strengthen efforts to raise awareness of this issue across the group.

[Customer Harassment Response Policy](#)

Labor Practices

Employee Benefits Program

Mizuno offers a distinctive employee benefits program that reflects the needs and preferences of our employees. In addition to defined contribution pension plans and long-service leave programs, we encourage participation in club activities and support self-organized study groups.

Employee Benefits System [*b] – Mizuno Group (Japan)

Defined contribution pension plan [*b]*	
Details	This is a system in which employees select and manage investment products based on contributions made by the company. Among the available investment options are funds that invest in companies actively engaged in CSR initiatives, thereby raising employees' awareness of CSR.
Performance	Investment education sessions were conducted for plan participants by professional instructors. Continued promotion of the matching contribution system, which allows employees to add personal contributions to those made by the company. Matching contribution participation rate: 54.3% Adoption rate of the "DC Good Company" fund, which invests in CSR-oriented companies: 1.40%
Employee stock ownership association [*b]	
Details	This system supports employees in building personal assets by providing a 10% incentive on their contributions toward the purchase of company stock.
Performance	As of the end of March 2025, the number of participants was 905 (out of 3,246 eligible employees across the group).
Long service leave system[*b]*	
Details	This program aims to promote rest and rejuvenation through travel by granting special leave and travel subsidies every five years of continuous service.
Performance	In fiscal year 2024, 253 employees were eligible, with 159 taking advantage of the program (utilization rate: 65.2%).
Cafeteria plan system[*b]	
Details	Employees are granted a uniform number of points, which they can use to select benefits that suit their individual lifestyles. The company subsidizes part of the cost.
Performance	Approximately 668,000 points were used across the group.
Promoting club activities and in-house sports events[*b]	
Details	This system encourages and supports sports and cultural activities within the company to promote employee health and enhance internal engagement.
Performance	Around 25 clubs are active across the domestic group, including sports clubs (baseball, soccer, rugby) and cultural clubs (light music, etc.). In fiscal year 2024, an online walking event was held once, with approximately 900 employees participating nationwide.

* The reporting scope excludes the Seno Group and includes Mizuno Corporation and some domestic Mizuno Group companies.

Dialogue with Employee Representatives

Mizuno and Mizuno Technics have entered into a union shop agreement with Mizuno Union as part of their labor agreement. As of March 31, 2025, Mizuno Union had 1,294 union members and 783 non-members.

To foster mutual understanding and improve workplace conditions, the companies hold multiple monthly meetings for dialogue and consultation. These include the Central Labor-Management Council, regional labor-management councils, the Wage and Labor Study Group, and the Safety and Health Committee. These meetings are attended by top management, HR representatives, and union leaders.

Discussions cover a wide range of topics, including business conditions, fair labor practices, the development and operation of various systems, and the creation of a more comfortable and supportive work environment.

■ Labor-Management Initiatives

Mizuno and Mizuno Technics have entered into a union shop agreement with Mizuno Union as part of their labor agreement. As of March 31, 2025, Mizuno Union had 1,294 union members and 783 non-members, with union members accounting for 62.3% of the total workforce of 2,077 employees. Under the labor agreement, contract employees, temporary staff, and part-time employees are eligible to join Mizuno Union under an open shop system. As of the same date, 35 such employees had joined the union (included in the total of 1,294 union members).

Regular labor-management meetings are held in accordance with the labor agreement. These meetings serve as a platform for exchanging opinions and conducting discussions aimed at improving working conditions, developing and operating fair labor systems, and creating a more comfortable and supportive workplace environment.

■ Central Labor-Management Council

The Central Labor-Management Council is a key platform for dialogue between Mizuno, Mizuno Technics, and Mizuno Union. It is held once every two months and attended by senior representatives from both the company and the union. On the company side, 2 to 4 executive officers and 2 to 4 managers at the deputy general manager level or above participate. From Mizuno Union, 4 to 8 central executive members attend.

The council discusses a wide range of agenda items, including:

1. Basic management policies and annual business plans
2. New business initiatives, establishment or closure of business sites, and overseas operations
3. Formulation and revision of labor agreements, various labor-management accords, and work regulations
4. Employee safety and health
5. Corporate social responsibility (CSR)
6. Employee recruitment plans, training and development, and welfare programs

These discussions aim to promote fair labor practices, improve working conditions, and build a workplace environment that supports employee well-being and sustainable business growth.

■ Regional Labor-Management Councils

- Composition: Same as Central Labor-Management Council.
- Frequency: Every month
- Supplementary Agenda Items: Issues related to the business locations within each block from the Central Labor-Management Council's supplementary agenda items.

For non-union members (employees not subject to the labor contract), employment conditions are set based on the employment rules for fixed-term and indefinite-term employees, which are created based on the labor contract.

■ Communication between Labor and Management

Under the labor agreement, employees must be notified of reassignments in advance: at least one month prior for secondments and relocations, and at least one week prior for other types of transfers.

For other significant changes, the labor agreement requires prior consultation between labor and management. These matters include:

- Recognition of non-union members among employees subject to the union-shop system
- Discussions regarding full-time union officials
- Disciplinary actions involving union members
- Establishment, revision, or abolition of regulations concerning wages and retirement allowances
- Annual scheduled working hours and holidays
- Revisions to various employee welfare programs
- Collective bargaining and related matters

Materiality

Talent Development and Capability Building

Basic Concepts

Based on the belief that the growth of each Mizuno employee leads to the sustainable growth of the Mizuno Group and ultimately to the realization of our purpose, vision, and values, we are committed to human resource development. Each employee is expected to autonomously strive for personal and professional development and to demonstrate the results of these efforts in their daily work activities, thereby creating a sense of fulfillment. The company supports the growth of each employee and encourages them to create their own growth plans through long-term, continuous, and systematic training. Additionally, human resource development and training are regarded as essential responsibilities of management. Managers are expected to continuously and systematically develop the abilities and skills of their team members.

Human Resource Development Initiatives

Mizuno promotes employee development through three main approaches. The foundation is philosophy-based education, which helps employees understand and internalize the company’s DNA and core values. Building on this, hierarchical training programs are provided to help employees acquire the common skills and competencies required at each organizational level. In addition, purpose-specific training is offered to develop specialized skills necessary for solving individual and concrete business challenges. Finally, Mizuno supports self-directed learning, encouraging employees to take initiative in their own development.

Mizuno Employee Development Framework

	Details	Number of Participants in FY2024
Philosophy (Corporate DNA) Education	Based on “Purpose (Corporate Philosophy), Vision (Ideal Future), and Values (Core Beliefs),” this program promotes global understanding and sharing of Mizuno’s corporate DNA.	Approx. 3,500[*c]
Hierarchical Education	Provides foundational skills and competencies required at each organizational level. • New Employee Training 53 • 3rd-Year Career Training 23 • 1st-Year Sales Training 23 • 2nd-Year Sales Training 23 • 3rd-Year Sales Training 12 • Promotion Training (C3/C4) 94 • Assistant Manager Training 15 • Manager Training 37 • Department Head Training 7 • Management Training 224 • Evaluator Training 210	452[*d]
Purpose-Specific Education	Develops specialized skills to address specific business challenges. • Business Leader Program 18 • DX Leader Program 30 • Marketing Training 30	Approx. 78[*d]
Self-Directed Learning Support	Actively supports employees who take initiative in learning (e.g., English, Chinese, business skills, etc.).	Approx. 200[*d]

Programs That Support Employee Challenges

Mizuno free agent system [*d]	
Details	To help employees achieve self-realization, motivate employees to take up challenges, and enliven the workplace, Mizuno accepts the following types of free-agent applications: 1) job offer, 2) proposal, and 3) registration. • Job offer: Different departments make job offers and employees apply for jobs that interest them. • Proposal: Employees propose ways to change the way work is being conducted or make new business proposals as individuals or groups. • Registration: Employees who want to perform jobs offered by the Company register as candidates for such jobs.
Performance	FY2024—job offer: none; proposal: none; registration: 5 employees
Technical job meister/craft system [*e]*1	
Details	To help employees grow into talented craftsmen, activate employees performing technical jobs, help technical workers improve their skills, and pass on the great skills of technical workers to future generations, Mizuno awards the titles of “meister” and “craft” to employees who have great craftsmanship and grant them an allowance.
Performance	FY2024—Baseball: 5 employees; golf: 5 employees; apparel: 3 employees
Employee invention reward system [*b]*2	
Details	The employee invention reward system aims to stimulate employees to continually come up with innovative and unique product development ideas. The system complies with patent law and aims to stimulate employees to actively put effort into coming up with inventions by properly evaluating work-related inventions made by employees (employee inventions) and granting rewards. There is no upper limit to the amount of reward that could be granted, and the amount is based on the level of contribution the inventor and invention makes to the Company’s sales.
Performance	FY2024—rewarded inventions: 9(23 inventors; excluding employees who have retired)
Overseas training and work system [*d]	
Details	The overseas training and work system aims to help employees acquire specialized knowledge and skills relating to their job by working overseas, and simultaneously broaden the horizons of young employees, cultivating core personnel for overseas expansion. The provision of on-the-job training (OJT) and problem identification and resolution programs are carried out at overseas business locations throughout the dispatch period. The place of work is determined based on individual’s wishes, career, and personnel planning, among Mizuno’s overseas branches or subsidiaries, and employees will engage in work abroad for one year.
Performance	FY2024, 2 employees dispatched
System for helping employees pursue an MBA (Master’s degree in business administration) at a graduate school in Japan as a working member of society [*d]	
Details	The system aims to help employees acquire specialized knowledge of business in general, build networks, acquire logical thinking skills, and broaden their perspective. The Company will lend employees the money to pay their tuition, and employees who continue working at Mizuno for three years after obtaining their MBA will be exempt from paying back the money they were lent.
Performance	FY2024, 2 employees currently attending classes

System for helping employees attend external business schools [*d]	
Details	The system aims to help employees acquire logical thinking skills, which Mizuno considers to be basic skills needed in business, and also aims to help employees build networks and broaden their perspective. In general, the Company will pay half of the tuition. However, if employees complete their business schools with outstanding grades, the Company will pay the total amount of their tuition.
Performance	FY2024, none
Online English and Chinese Language Learning Support System [*d]	
Details	This system aims to support employees in their self-improvement efforts to enhance their English and Chinese conversational skills. Employees receive lessons from foreign instructors online, and the company covers half of the tuition fees based on the attendance rate.
Performance	FY2024—number of employees who used this system: 79
System for helping employees take online video-based, business-related lessons [*d]	
Details	The system aims to help employees improve their knowledge related to business and also create an environment that encourages willingly learning about business. Employees will be able create an environment that will allow them to view business-related videos wherever they are whenever they want to online, and to encourage employees to willingly learn about business, the Company will pay the fees needed to do so.
Performance	FY2024—number of employees who used this system: 111

*1 The data given above was gathered from Mizuno Corporation and Mizuno Technics.

*2 The data given above was gathered from Mizuno Corporation and a number of Mizuno Group subsidiaries in Japan.

Award incentive

●Creator of the Year (COY)

Mizuno calls its sales representatives, including wholesale, corporate sales, and sports facilities sales representatives, who institute various measures to help clients resolve their issues “creators.” Creators who greatly help promote the sales activities of any given year are given a Creator of the Year (COY) award to encourage other creators to follow their example. In fiscal year 2024, 4 creators were given the COY award.

●Mizuno award system

To motivate employees to work harder and help them grow, employees who produce good results any given year and thereby contribute to the growth of the Company are given awards at the Founding Effort Commemorative Ceremony. In fiscal year 2024, awards were given to 101 projects (222 employees).

System for evaluating employees fairly

Mizuno has implemented a human resources evaluation system that is not based on age or length of service. Instead, evaluations are conducted based on three key criteria: the ability demonstrated through daily actions, the roles played, and the level of contribution to the company's performance.

To gain a more comprehensive understanding of each employee's abilities and aptitudes, Mizuno introduced a human resources assessment system in fiscal year 2017. This system enables multi-dimensional evaluation and supports more effective talent development.

During the evaluation period, supervisors and subordinates hold mid-term one-on-one meetings to review progress, make necessary adjustments, and reach mutual agreement. This process enhances the transparency and acceptance of evaluations.

To ensure high-quality evaluations and fair feedback, Mizuno also provides evaluator training. These efforts contribute to the development of subordinates and foster greater employee engagement. Evaluation results are shared through feedback meetings between supervisors and subordinates, with the aim of promoting employee growth through the evaluation process.

Future Challenges

Mizuno's approach to human resource development integrates three key components: on-the-job training (OJT) through daily work and job rotations, off-the-job training (OFF-JT) through structured education and training programs, and a human resource system that includes performance evaluations and compensation. Together, these elements aim to enhance both individual capabilities and overall organizational strength.

For management-level employees, the company has been operating a revised HR system since fiscal year 2019. This system evaluates and compensates employees based on the scope of their roles and the degree to which they fulfill them. Through effective implementation, Mizuno seeks to foster autonomy, broaden perspectives, and encourage a spirit of challenge.

For general employees, the HR system was revised in fiscal year 2022 to place greater emphasis on individual contributions aligned with personal aptitudes. Mizuno is committed to nurturing the capabilities that will serve as a source of future competitiveness and leadership.

Materiality

Promoting and respecting diversity

Basic Concepts

Mizuno believes that further advancing diversity is essential as a foundation for the Group’s growth strategy. We recognize that when each employee is able to express their individuality and demonstrate their abilities while growing together in a culture of mutual respect, it becomes a powerful driving force behind organizational and corporate success.

We aim to be a company where employees can actively manage both their work and personal lives according to their life stages, take pride in their roles, and work with vitality and purpose.

To further evolve and accelerate diversity as a company-wide management strategy, the Global Human Resources and General Affairs Department plays a central role in formulating overall policies and planning specific initiatives. These plans are shared with the Sustainability Operations Council to help address company-wide challenges.

Diversity Promotion Structure

Promoting Women's Empowerment

Mizuno is committed to empowering women in the workplace by supporting employees who are motivated and capable. We are enhancing both the tangible and intangible aspects of our work environment—such as career development programs, workplace culture reform, and systems that support diverse workstyles.

To raise awareness and foster growth among female employees, we are implementing initiatives including selective in-house training, career development interviews, and participation in joint forums for female managers with other companies. Our goal is to increase the ratio of female managers to 10% by the end of fiscal year 2025.

In fiscal year 2024, we implemented the following initiatives.

Initiatives to Increase the Ratio of Female Employees

In fiscal year 2024, Mizuno hired 26 women out of 52 new graduates[*d].

Including mid-career hires, the percentage of female regular employees hired in FY2024 was 39%[*d].

As stated in our General Employer Action Plan, we aim to increase the proportion of female hires (both new graduates and mid-career) to over 40%. We will continue to implement initiatives to raise the ratio of female employees.

■ Career Development Support

In fiscal year 2024, five female employees from various departments at Mizuno participated in the Diversity West Japan Study Session, which includes around 50 companies. As part of this initiative, a Career Design Forum was held again this year. Through roundtable discussions with female leaders from other companies, participants were encouraged to envision their future careers from a mid- to long-term perspective and take the first step toward their goals.

Recognizing that active participation of women raising children requires not only work-life balance but also greater involvement of men in childcare, Mizuno has expanded training opportunities to promote male participation in parenting. The following initiatives were implemented:

- Company-wide training to deepen understanding
- Cross-industry seminars for managers on male involvement in childcare

Gender Pay Gap at Mizuno Corporation (Non-consolidated)[*d]

Category	Female-to-Male Pay Ratio (%)
All Employees	73.8
Regular Employees	75.7
Contract/Temporary Staff & Part-time Workers	74.8

* Figures represent the ratio of average wages for women compared to men, with men's wages indexed at 100.

Promoting Mid-Career Hires and Driving Innovation

At the heart of diversity lies the power of embracing differences. Mizuno leverages the unique qualities and capabilities of individuals to foster innovation and create new value. In this context, we place high expectations on mid-career hires, who bring specialized expertise and fresh perspectives that contribute to innovation.

Currently, mid-career hires account for 15.7% of managerial positions. To raise this to 20% by the end of fiscal year 2025, we will continue to proactively recruit candidates for management roles—including female managers—through our mid-career hiring efforts.

■ Employment of People with Disabilities

As of March 2025, Mizuno's employment rate of people with disabilities was 2.40%[*d], which falls below the legally mandated rate of 2.5%. We are committed to further promoting the hiring of individuals with disabilities.

To support this effort and ensure that employees with disabilities can thrive in the workplace, we conducted company-wide training to deepen understanding and eliminate prejudice regarding disabilities.

■ Employment of Older Workers

Mizuno has a re-employment system that allows employees who retire at the mandatory retirement age of 60 to continue working until the age of 65 if they wish to do so.

In fiscal year 2023, 45 employees retired under the mandatory retirement system, and 40 of them utilized the re-employment program.

In fiscal year 2024, 28 out of 32 retirees chose to continue working under this system.

■ Participation in the Japan Platform for Migrant Workers towards a Responsible and Inclusive Society

As of the end of October 2023, there were approximately 2.05 million foreign workers in Japan, including about 410,000 technical intern trainees, and around 320,000 establishments employing them (according to the Ministry of Health, Labour and Welfare). These workers are now essential members of Japan's economy and society.

Toward the SDGs' target year of 2030, Mizuno is committed to contributing to the improvement of working environments for foreign workers. Through participation in initiatives such as JP-MIRAI, we support the Platform Action Principles, which align with international standards. By doing so, we aim to help ensure that employers and accepting organizations responsibly and lawfully provide stable employment opportunities for foreign workers.

Fostering Awareness and Culture for Promoting Diversity

At Mizuno, we regard the promotion of diversity as one of the key pillars for achieving sustainable growth.

In fiscal year 2024, we held the “Let’s Think Together: Mizuno DE&I Forum,” bringing together President Mizuno, outside directors, executive officers, and employees. Under the concept of ONE MIZUNO, participants engaged in discussions on the value that diverse perspectives bring to organizations and explored various themes related to diversity promotion. The forum provided an opportunity to experience the power of diverse viewpoints firsthand. Additionally, we conducted company-wide DE&I training three times during fiscal year 2024. The sessions focused on themes such as male participation in childcare, promoting the inclusion of people with disabilities, and health issues unique to women.

Alongside efforts to create a more inclusive work environment, we will continue to provide learning opportunities and promote ongoing awareness and mindset transformation among our employees.

Promoting Understanding of LGBTQ+

As part of our company-wide diversity education program, Mizuno conducted training sessions focusing on LGBTQ+ as one aspect of diversity. These sessions helped deepen employees' understanding and awareness of LGBTQ+ issues.

Creating an Inclusive Work Environment and Supporting Employee Growth

Through the promotion of diversity, Mizuno is working to create a workplace where employees from diverse backgrounds can fully demonstrate their abilities and find meaning in their work. By fostering such an environment, we aim to support the continued growth and development of our employees.

Work Life Management

Annual Paid Leave System

Mizuno grants annual paid leave to full-time and contract employees as follows: 10 days upon joining the company, and up to 20 days per year after six years of continuous service.

Since fiscal year 2014, employees have also been able to take annual paid leave in hourly increments (up to five days or 40 hours per year), and usage of this system has been steadily increasing.

To further enhance employee welfare, Mizuno has introduced a rollover system that allows employees to use expired annual paid leave for personal reasons such as illness or injury, caregiving, volunteer work, and sports promotion activities.

In fiscal year 2024, the annual paid leave utilization rate at Mizuno Corporation was 52.9%[*d].

Support Systems for Balancing Work and Family Life

Mizuno offers a variety of support systems to help employees balance their work and family responsibilities.

In terms of childcare support, employment patterns for female employees—from pregnancy and childbirth through the childcare period—are well established and widely utilized. These include:

- Paid leave available in hourly increments from the start of pregnancy (up to 40 hours per year)
- Prenatal and postnatal leave
- Childcare leave and extended leave (up to the child's second birthday)
- Shortened working hours after returning to work (until the child completes third grade in elementary school)
- Flextime system (available until the child completes third grade in junior high school)

To retain valuable talent, Mizuno has also introduced a re-entry system that allows employees who left the company due to life events such as marriage or childbirth to return to work.

Male employees are likewise encouraged to take an active role in childcare, with support through childcare leave and the flextime system. In fiscal year 2024, the paternity leave utilization rate was 70.9%.

For caregiving support, Mizuno conducts internal surveys to better understand employee needs and enhance related systems accordingly. In fiscal year 2021, we launched a trial program allowing employees to take shortened working hours or leave for infertility treatment, as well as shortened hours for nursing care. To date, three employees have used these programs.

■ Enhancing Support Systems for Childbirth and Childcare

To help employees thrive through effective work-life management and flexible work styles, Mizuno is committed to improving both the structural and cultural aspects of the workplace, supporting motivated and capable individuals.

At Mizuno, 63.8% of married female employees—141 out of 221—are working mothers who successfully balance their careers and family responsibilities. The retention rate of employees three years after returning from childcare leave is 100%, with 103 employees continuing to work with us.

Support Systems for Childbirth and Childcare

Childcare leave systems [*d]*	
Details	This system aims to improve Mizuno's welfare system by allowing employees to devote themselves to childcare for a certain period without having to give up their status as an employee at Mizuno.
Performance	In FY 2024, 90 employees used this system. (full-time employees: 33 men and 53 women, contract workers/part-timers: 4 women)
Childcare short-working-hour system [*d]*	
Details	This system defines the details relating to allowing employees to work shorter hours to care for their children who are at ages subject to protection under the childcare leave system up until their children complete their third year of elementary school.
Performance	In FY 2024, 94 employees used this system. (full-time employees: 1 man and 85 women, contract workers/part-timers: 8 women).
Leave for Pregnancy-related Health Conditions[*d-b]	
Details	A leave system designed to protect maternal health by allowing employees to take time off during pregnancy due to health issues such as morning sickness or anemia.
Performance	In FY 2024, no employees used this system.
Childcare Support Leave[*d]	
Details	A paid leave system designed to support employees in balancing work with childbirth and childcare, and to encourage the use of childcare leave.
Performance	In FY 2024, 22 employees used this system. (full-time employees: 22, contract workers/part-timers: 0).
Childcare-related Benefits under the Cafeteria Plan[*d]	
Details	These regulations define what expenses relating to childcare will be covered by the cafeteria plan system.
Performance	Of all cafeteria points used in FY 2024, those relating to childcare accounted for 2.0%.
Re-entry System[*d]	
Details	This system aims to increase the chances that employees who left for certain personal reasons (including childbirth and nursing) have of returning to Mizuno, and it does so by providing them with information on job openings at Mizuno.
Performance	In FY 2024, no employees used this system.

* The data given above was gathered from Mizuno Corporation and a number of Mizuno Group subsidiaries in Japan.

Enhancing Caregiving Support Systems

At Mizuno, we are committed to strengthening our caregiving support systems with the goal of ensuring that no employee is forced to leave their job due to caregiving responsibilities.

Caregiving Support Systems

Caregiving leave system[*b]*	
Details	This system defines the details relating to allowing employees to take leave to care for family members who require caregiving.
Performance	In FY 2024, no employees used this system.
Short-working hour system for- Family Caregiving[*b]*	
Details	This system defines the details relating to payment and other conditions when employees request to work shorter work hours than the regular work hours due to the need to care for family members who requiring care.
Performance	In FY 2024, no employees used this system.
Regulations relating to nursing care under the cafeteria plan system[*b]*	
Details	These regulations define what expenses relating to nursing care will be covered by the cafeteria plan system.
Performance	Of all cafeteria points used in FY 2024, those relating to nursing care accounted for 0.1%.

* The data given above was gathered from Mizuno Corporation and a number of Mizuno Group subsidiaries in Japan.

External Recognition for Diversity Initiatives

Mizuno has received external recognition for its efforts to promote diversity, including the “Eruboshi” certification for advancing women's participation and the “Kurumin” certification for supporting child-rearing.
For more details, please refer to the section on external evaluations.

[External Recognition](#)

Future Challenges

As teams increasingly consist of employees from diverse backgrounds, it will become even more important to leverage the strengths of such diversity. While different perspectives and ideas can lead to more creative solutions and strategies, they may also result in misunderstandings or challenges. To address this, Mizuno will continue to provide education that promotes mutual understanding.
We are also committed to creating an environment where all employees are treated fairly and equitably, and where they can pursue personal growth and self-fulfillment. By fostering a culture that respects diversity, we aim to build a workplace where everyone can thrive as their authentic selves.
Mizuno views the promotion of Diversity, Equity & Inclusion (DE&I) as a key management priority. By building an organization that harmonizes diversity with work-life balance, we aim to enhance employee engagement and performance, ultimately contributing to the company’s sustainable growth.

Health Promotion Initiatives

Basic Concepts

The Mizuno Group believes that ensuring the physical and mental well-being of each employee and helping them achieve work-life balance is essential to the company's growth and the realization of its management philosophy.

To promote employee health, the President of Mizuno has issued a Health Management Declaration. Starting in fiscal year 2024, this declaration has been renewed to further advance initiatives that support employee well-being and enhance engagement.

Health Management Declaration (Full Text)

The Mizuno Group, guided by the belief that “a company is its people,” hereby declares its commitment to further enhancing an environment where employees proactively engage in health promotion, centered around the pursuit of the power and value of sports.

We believe that achieving well-being for employees around the world forms the foundation of our management, contributes to the realization of our corporate philosophy, and drives the growth of our business.

The Mizuno Group will continue striving to bring “A-mon” (best products for customers) to the world, powered by the realization of well-being for all stakeholders, including our employees.

Health Management Promotion System

The system for health promotion initiatives

■ Health Promotion Initiatives and External Evaluation

Mizuno, based on its declaration of health management, has set specific targets for four challenges: “Reducing the ratio of those at risk for lifestyle-related diseases,” “Early detection of serious diseases,” “Reduction in the number of employees taking leave for mental health,” and “Reduction in smoking rates.” We have embarked on various health promotion initiatives, focusing on the encouragement of sports and exercise.

These activities have been recognized, and we have been certified as an “Excellent Health Management Corporation 2025 (Large Corporation Division) (White 500)” and “Sports Yell Company 2025,” consecutively earning the “Silver” status in both categories.

For specific details of our initiatives, please refer to the content titled “Health Promotion Efforts” on the Mizuno homepage.

[Link: https://corp.mizuno.com/en/about/policies#ARC02](https://corp.mizuno.com/en/about/policies#ARC02)

In-House Medical System

To support employee health promotion activities, we are implementing the following initiatives.

Voluntary Health Checkups Beyond Legal Requirements [*d]	
Target Group	Full-time Employees, Contract Employees, Part-time Contract Employees
Details	For employees aged 35 and over, Mizuno conducts health checkups that go beyond legally mandated items, aiming to prevent lifestyle-related diseases.
In-House Mental Health Consultation Sessions [*b]	
Target Group	No restrictions
Details	Regular face-to-face and online mental health consultations are offered by medical professionals to employees who wish to participate.
Company benefits system[*b]	
Target Group	Full-time Employees, Contract Employees, Part-time Contract Employees
Details	For optional health checkups associated with regular checkups for employees aged 35 and over, Mizuno subsidizes part of the cost through programs such as the cafeteria plan.

Future Challenges

• Support for Work-Life Balance

Mizuno will continue to promote initiatives that support employees in balancing work with childcare, caregiving, and personal health issues. These efforts are not only aimed at preventing employee turnover but also at enhancing engagement.

• Paid Leave

While ensuring that all employees take at least five days of paid leave annually, Mizuno will further promote paid leave usage by fostering a workplace culture that encourages employees to take time off.

• Occupational Safety and Health

Mizuno's commitment to safety and health goes beyond legal compliance. We will review and strengthen our safety and health promotion framework to create a safer and more comfortable work environment. Risk management will also be integrated into our safety and health efforts, including a revision of our business continuity plan.

• Health Management

Mizuno will continue to improve its PDCA cycle for health promotion each year. In addition to encouraging exercise and sports, we will incorporate new perspectives such as dietary education, sleep, women's unique health concerns, and health promotion for older employees, aiming to further maintain and enhance overall employee health.

Occupational safety and health

Basic Concepts

At the Mizuno Group, based on the “Occupational Safety and Health Basic Policy,” we operate a labor safety and health management system according to our internal voluntary standards, working on the prevention of workplace accidents among employees and the maintenance and enhancement of health, as well as disease prevention.

Occupational Safety and Health Basic Policy

Philosophy

Mizuno Corporation and all related companies involved in the manufacturing and sale of Mizuno Corporation's products recognize that ensuring the safety and health of employees is an integral part of business operations, and we commit to creating a safe and comfortable working environment.

Policy:

1. Each business location will comply with all safety and health-related laws and regulations in their respective regions, while establishing necessary internal standards to improve management levels.
2. Within Mizuno Corporation and all Mizuno Group organizations, efforts will be made to build organizational structures that enable the promotion of safety and health activities and to clarify where responsibility lies.
3. Regular evaluations, inspections, and improvements of dangers and hazards related to safety and health will be conducted in all areas of business activities.
4. All employees will be provided with necessary and sufficient education and training to ensure safety and health.
5. Recognizing that the usefulness of safety and health is realized through daily information sharing, important information will be disseminated to employees through the internal network and other means of communication, aiming to raise awareness.
6. Regular audits will be conducted to measure and improve the safety and health management system.
7. Participation in administrative and community activities related to safety and health will occur.
8. Appropriate management resources will be allocated in the execution of this policy, and effective improvements will be continuously implemented.

Occupational Safety and Health Management System

Mizuno holds Safety and Health Committee meetings at all business locations, jointly organized by labor and management representatives. These committees discuss and examine measures related to employee safety, including the prevention of occupational accidents, the promotion and maintenance of health, and disease prevention.

To oversee and coordinate these efforts, Mizuno has established a Central Safety and Health Committee chaired by the executive officer responsible for Human Resources and General Affairs. This committee convenes twice a year to review the safety and health plans for the current fiscal year and report on the previous year's activities.

Based on the central committee's plans, each business location holds monthly Safety and Health Committee meetings chaired by the respective department heads. These meetings verify the implementation status of annual plans, investigate the causes of workplace issues, occupational injuries, and accidents, and formulate and resolve measures to prevent recurrence. All meeting records are stored in a shared database accessible to all Safety and Health Committees.

In collaboration with the labor union, Mizuno also conducts building inspections and formulates improvement plans for identified risk environments. Legal inspections and corrective actions are fully compliant, with a 100% adherence rate.

Additionally, Mizuno has established a “General Consultation Desk” to receive various individual employee concerns. While no reports or consultations regarding workplace risks have been recorded to date, Mizuno recognizes the importance of raising awareness across the Group that such consultations are available.

Enhancing Occupational Safety and Health Activities

Following fiscal year 2023, in fiscal year 2024 Mizuno continued to implement various safety and health initiatives with a focus on legal compliance, improving risk management levels, and addressing sustainability themes such as health promotion, environmental protection, and earthquake preparedness.

We conducted hands-on training using fire extinguishers and fire hydrants during self-defense firefighting drills, AED usage training, and updated our safety confirmation procedures using a safety confirmation app.

At the Innovation Center Mizuno Engine, located on the Osaka headquarters premises, we continue to aim for zero accidents and occupational injuries. However, in fiscal year 2024, two occupational accidents occurred at the center. In response, the frequency of workplace patrols by the Safety and Health Committee was increased, and countermeasures for hazardous areas were implemented.

Across the Mizuno Group, we have increased the number of healthcare professionals and continue efforts to identify and eliminate factors or conditions that could lead to occupational injuries. As part of our early disease detection initiatives, cancer screenings have been incorporated into regular health check-ups, and we regularly conduct health consultations with industrial physicians and mental health consultations with advisory doctors.

We remain committed to continuously promoting and maintaining the safety and health of our employees over time.

Fire Hydrant Training

AED Training

Report on Mizuno's safety and health plan for FY 2024

Initiative	Results
Facility Management	Zero incidents caused by facility defects (e.g., collapse, damage, electric leakage, fire). Result: 0 cases
Health management	Implementation of stress checks, verification of check-up rates at two sites piloting a new health check method*, prevention of health issues during telework, dissemination of health information via video, and compliance with health-related laws and regulations. * Regular health check-ups were replaced with government-sponsored lifestyle disease prevention check-ups.
Risk management	Zero incidents during disasters; continuous improvement and development of emergency response measures.
Vehicle management	Efforts to reduce rear-end and collision accidents, parking lot incidents, and external complaints. Result: Rear-end/collision and parking lot accidents increased by 5 cases year-on-year; external complaints decreased by 1 case.
Cafeteria management	Zero cases of food poisoning, equipment-related accidents, or occupational injuries in the cafeteria. Result: 0 cases for all categories
Health Management Planning and Implementation	Exercise events (50% participation rate), health education, sharing health management status with the executive board (10+ times/year), cancer screenings (over 90% participation rate), and health consultations with physicians and nurses. Result: 100% participation rate in health check-ups
Health Education Planning and Implementation	Seminars by external lecturers on women's health, cancer awareness for working generations, and nutrition; internal training by medical staff on line care, health education for new employees, and utilization of health check-up and stress check results.

Materiality

Corporate Governance

Based on the corporate philosophy of “Contributing to society through the advancement of sporting goods and the promotion of sports” and our belief that the rationality and objectivity of management decisions and the swiftness and transparency of decision making are important to improve the corporate value of the Group, we strive to build and strengthen a corporate governance system that can realize them.

[Please refer to the Financial Report for details of our corporate governance](#) .

Corporate Governance system

With a resolution of the 103rd Ordinary General Meeting of Shareholders held on June 23, 2016, the corporate governance system has been transferred to a company with an audit and supervisory committee. Directors serving as Audit and Supervisory Committee members have voting rights on the Board of Directors and are expected to help improve the effectiveness of audits and supervision compared to corporate auditors. We believe that this leads to the enhancement of corporate governance.

Our Articles of Incorporation stipulate that the number of directors shall be seven or less (excluding directors serving as Audit and Supervisory Committee members) and that the number of directors serving as Audit and Supervisory Committee members shall be three or less. As of July 1, 2025, we have five directors (excluding directors serving as Audit and Supervisory Committee members) and three directors serving as Audit and Supervisory Committee members.

Of the five directors (excluding directors serving as Audit and Supervisory Committee members), four are directors who execute business, including the President (CEO), and one is an outside director.

When appointing nominees for the Board of Directors, we adhere to specific standards. Nominees should possess extensive knowledge and experience along with profound insights related to group management, and they must demonstrate the aptitude, character, and judgement appropriate for a directorial role. The process of selection also considers the balance of knowledge, experience, and specialty skills, while ensuring diversity within the Board of Directors.

Moreover, when it comes to external director nominees, Mizuno mandates compliance with our predefined standards and guidelines pertaining to independence.

Of the three directors serving as Audit and Supervisory Committee members, one is a full-time Audit and Supervisory Committee member and two are part-time outside directors. The Audit and Supervisory Committee uses the internal control system to audit and supervise the status of business execution throughout the Group, including the execution of duties by directors. In addition, Audit and Supervisory Committee members work with accounting auditors to improve the efficiency of audits.

The Chairman of the Board of Directors is also the serving President (Representative Director) Outside directors are expected to express their opinions with an open mind from an objective and neutral standpoint at the Board of Directors meetings without being bound by industry practices and business relations. We believe that they help improve the rationality and transparency of decision making and management decisions of the Board of Directors. Currently, the ratio of outside directors on the Board of Directors is 37.5%.

Mizuno has in place the Nomination and Compensation Committee as a voluntary advisory body that is equivalent to nomination and compensation committees. The independence of this committee is ensured by the appointment of independent outside directors to constitute a majority of its members. With regard to the appointment of directors, the Board of Directors seeks advice on the candidates determined based on the aforementioned criteria. The Committee then deliberates on the suitability of the candidates in light of these standards and reports back to the Board of Directors.

We have also introduced an executive officer system. Under this system, the Board of Directors fulfills the function of strategy formulation and management supervision, and executive officers are responsible for business execution, thereby aiming to ensure management transparency and speed up decision making. Executive officers are in charge of each management area, including business divisions (products handled and sporting events), sales channels, sales areas (including overseas), and subsidiaries, and are responsible for business execution in their management area throughout the Mizuno Group.

Important issues discussed in the Sustainability Operations Council and the Risk Management Committee are reported to the Board of Directors. Furthermore, the progress of matters discussed and decided upon in the Board of Directors is supervised by the Board itself. For more details about the management structure related to sustainability, please refer to the “[Sustainability Operations Structure](#)”.

■ Experience and Skills of the Directors

Please refer to '[Company Overview - Board of Directors](#)' for a list of officers and their roles.

* For directors, you can view their profiles and reasons for appointment.

Please refer to the chart below for information on the skills (experience, expertise) possessed by directors and directors who are members of the Audit and Other Committees.

Diversity of the Board of Directors

In order to have a Board of Directors capable of appropriate management supervision, we ensure a balance of knowledge, experience, and expertise, taking into account the diversity of the Board. In addition to internal directors, we have appointed several external directors, making the ratio of external directors more than one-third. By appointing external directors who bring more specialized perspectives and diversity, we further enhance the function of our Board of Directors. It should be noted that for external directors, we have set standards and policies regarding independence as requirements.

Analysis and Evaluation of the Effectiveness of the Board of Directors

We conduct a self-evaluation of the effectiveness of the Board of Directors through an anonymous questionnaire targeted at all directors. The results of this questionnaire are then analyzed and evaluated to ensure the overall effectiveness of the Board of Directors. The primary evaluation criteria are the composition of the Board of Directors, the culture of the Board, monitoring of agenda items and business execution by the Board, and the operations of the Board. Based on the results of the questionnaire, we have confirmed that we are generally able to ensure effectiveness.

In addition, the questionnaire collects perceived issues from each director, which are then used to improve the operation of subsequent Board meetings. Following the results of the questionnaire, we have increased our opportunities to discuss long-term growth strategies and managerial issues more than in previous periods.

Please note that we conduct the questionnaire annually, and we have achieved a participation rate of 100%.

Training of directors

With the aim of having directors appropriately fulfill their expected roles and duties, we provide and mediate opportunities for them to acquire the knowledge necessary to deepen their understanding of matters related to their roles and duties. Directors are mainly provided with the opportunity to attend workshops organized by third-party organizations, and their costs are borne by the company. When a new director is appointed, a briefing session is held by the Corporate Planning Office, the Global Human Resources & General Affairs Department, the Legal Affairs Office, and the Accounting and Finance Department so that the new director can acquire the necessary knowledge on the company's business, finance, organization, and other matters.

Status of internal audits and audits by the Audit and Supervisory Committee

The Internal Audit Office of Mizuno Corporation conducts internal audits of the Mizuno Group in cooperation with the legal division, the accounting and finance division, and the human resources and general affairs division, which collect information and conduct investigations. The Internal Audit Office conducts internal audits to ascertain the validity and legality of business execution and procedures and reports the audit results to executive directors in charge of internal control and the Board of Directors as needed. To ensure the effectiveness of the Audit and Supervisory Committee, the Board of Directors requests the Internal Audit Office to collect the necessary information and conduct investigations and closely cooperates with it by exchanging information and opinions.

For the purpose of grasping the status of development and operation of internal control, internal auditors attend meetings and inspect documents as appropriate and ask for explanations from the relevant divisions as needed to check the appropriateness of transactions and the decisions that are made in the process of transactions. Thus, we work to improve the effectiveness of internal audits.

Internal control system

Mizuno Corporation is involved in the development and operation of the internal control system of the Mizuno Group, including its subsidiaries, in accordance with the “system for ensuring the appropriateness of business” (basic policy on the development of the internal control system) established by a resolution of the Board of Directors. It has clarified that subsidiaries should perform their business activities and operate their risk management system under the same policy management as Mizuno Corporation.

In addition, to ensure the reliability of financial reports related to the consolidated financial results, the Response Committee for the Internal Control Reporting System, chaired by the executive director in charge of accounting and finance, develops, operates, and evaluates the internal control system across all organizations of the Mizuno Group based on the Internal Control Regulations.

To promptly announce information that should be disclosed in a timely manner, such as important facts related to the Mizuno Group, upon decision of the Board of Directors, the executive director in charge of accounting and finance thoroughly manages information as the person responsible for handling information. In particular, stock trading by officers and other insiders is tightly controlled through monitoring and is strictly supervised to prevent the occurrence of insider trading.

■ Executive compensation

Based on our basic policy on how to determine the compensation of officers or its calculation method, we have established a compensation system that can motivate directors (excluding Audit and Supervisory Committee members) to contribute to improving corporate value with the aim of appointing and securing talented human resources as managers. In this compensation system, we have ensured the transparency, fairness, rationality, and objectivity of the calculation method of compensation based on the average level of compensation at companies of the same size listed on the Prime Market of the Tokyo Stock Exchange in order to ensure accountability to stakeholders.

For the maximum amount of compensation for directors(excluding Audit and Supervisory Committee members), the amount of basic compensation and the amount of performance-linked compensation are determined by the Board of Directors within the range of compensation resolved at the 103rd Ordinary General Meeting of Shareholders, held on June 23, 2016, according to an examination and report by the Nomination and Compensation Committee, composed of a majority of independent officers.

For the maximum amount of stock-based compensation for directors (excluding Audit and Supervisory Committee members and outside directors), the amount of transfer-restricted stock-based compensation is determined by the Board of Directors within the range of compensation resolved at the 105th Ordinary General Meeting of Shareholders, held on June 21, 2018, according to an examination and report by the Nomination and Compensation Committee.

The defined amount of basic compensation for directors (Audit and Supervisory Committee members) is determined separately for full-time and part-time Audit and Supervisory Committee members with reference to the average level of compensation at companies of the same size listed on the Prime Market of the Tokyo Stock Exchange with the aim of appointing and securing human resources with a wide range of experience and deep insight who can submit useful proposals at the Board of Directors meetings and appropriately fulfill their duties in auditing and supervising the business execution of the Board of Directors.

For the maximum amount of compensation for directors (Audit and Supervisory Committee members), the amount of basic compensation is determined within the range resolved at the 103rd Ordinary General Meeting of Shareholders, held on June 23, 2016, by a resolution of the Audit and Supervisory Committee.

Risk management system

To clarify the responsibility system for risk management, we have established the Risk Management Committee, chaired by the President (CEO). The Risk Management Committee is responsible for identifying and evaluating all types of risks associated with business activities and overseeing risk management concerning the implementation of countermeasures and information disclosure throughout the Mizuno Group based on the Risk Management Regulations.

Each department and subsidiary of Mizuno Corporation conducts training and prepares manuals on risk management to ensure a system that can respond to various foreseeable risks in each field. We have also prepared the Crisis Management Manual, which explains how to foresee and respond to natural disasters, sabotage from outside the company, and fraud.

Meanwhile, matters concerning the short-, medium-, and long-term impacts of climate-related risks are placed on the agenda of the Risk Management Committee, which has been in charge of more specific discussions about those matters since FY 2021. For information about the identification, assessment, and management of climate-related risks, please refer to the TCFD Report.

[Climate Change Strategy “Disclosures in accordance with the TCFD recommendations”](#)

Materiality

Compliance / Anti-corruption

Basic Concepts

Based on the Mizuno Corporation Ethical Standards, we make company-wide efforts to ensure thorough compliance throughout the Group. We strive to prevent compliance issues by providing education to employees to deepen their understanding of laws and regulations. We have also established a whistle-blowing system to detect and resolve issues at an early stage.

In fiscal year 2024, there were no cases of serious compliance violations, including anti-competitive behavior, nor any cases subject to legal action.

Compliance Risk Management System

We have established the Risk Management Committee, chaired by the President (CEO), to regularly identify risks that may affect Mizuno's business, including compliance violations, and to implement remedial measures effectively and efficiently.

In addition, we conduct business audits through the Internal Audit Office and operate an internal reporting system to help suppress risks and resolve issues at an early stage.

Management system (As of 2024)

Operation system of the whistle-blowing system

We have established the Risk Management Committee, chaired by the President (CEO), to regularly identify risks that may affect Mizuno's business, including compliance violations, and to implement remedial measures effectively and efficiently.

We also conduct business audits through the Internal Audit Office and operate an internal reporting system to help suppress risks and resolve issues at an early stage.

Under this whistle-blowing system, we operate the following internal reporting channels to prevent and detect misconduct—including legal violations, unethical behavior, and dishonest acts—at an early stage, enhance the company's self-regulatory capabilities, and maintain public trust:

1. Mizuno Fair Play Hotline
2. Compliance Hotline (Senoh Group)
3. Mizuno Global Hotline (for especially serious cases at overseas bases; the number of overseas bases covered by this system is planned to be gradually expanded)

Enhancement of employee awareness

■ Provision of Compliance Education

To ensure thorough compliance, it is essential to raise each employee's understanding and awareness. In fiscal year 2024, we continued to provide compliance education [*b] as part of company-wide training, aimed at helping employees acquire basic legal knowledge and perspectives related to their work.

In addition, we provided targeted training to relevant departments—such as planning and development, and business divisions—on legal matters specific to their operations.

By conducting compliance education on a regular basis, we strive to embed both knowledge and awareness throughout the organization.

■ Operation of the Whistle-Blowing System

Mizuno operates a whistle-blowing system to prevent and detect misconduct—including legal violations, unethical behavior, and dishonest acts—at an early stage. This system also aims to enhance the company's self-regulatory capabilities and maintain public trust.

We regularly conduct awareness surveys to assess the current status and challenges of the system. In addition, we promote awareness through company-wide training and by distributing portable cards containing information about the internal reporting channels to all employees. These efforts help deepen understanding of the system and improve its reliability, enabling early detection and appropriate responses to issues.

In January 2020, Mizuno introduced the Mizuno Global Hotline, a system that allows employees at certain overseas locations to report especially serious cases directly to the Head Office, in addition to the internal reporting channels established at each overseas base. We plan to gradually expand the number of overseas locations covered by this system.

In line with the enforcement of the amended Whistleblower Protection Act in June 2022, we reviewed the whistle-blowing system across the Mizuno Group and established a new external reporting channel. To further strengthen whistleblower protection, oversight of the system was transferred from the Legal Department to the more independent Internal Audit Office.

Mizuno is also working to enhance the effectiveness of the whistle-blowing system by aiming for 100% awareness among employees of the internal reporting channels (Mizuno Fair Play Hotline / Harassment Hotline), and by incorporating this into annual compliance training.

■ Whistleblowing and Investigation Flow (As pf 2024)

■ Usage status of the whistle-blowing system[*b]

We did not identify any serious compliance violations during fiscal year 2024.

Mechanisms to Ensure Fair Transactions

Many suppliers and business partners—including small factories and individuals—are involved in the production of Mizuno products. To build strong relationships and ensure fair transactions, Mizuno provides training to employees in relevant departments on the Act against Delay in Payment of Subcontract Proceeds, etc. to Subcontractors (Subcontract Act). In addition, the Internal Audit Office continuously monitors transactions with major business partners to ensure fairness.

We also hold CSR procurement briefing sessions for all suppliers of Mizuno products prior to transactions, explaining our approach and requesting compliance with the Mizuno CSR Procurement Regulations, which include anti-corruption provisions. Furthermore, we conduct regular audits of suppliers to confirm that no corrupt practices are taking place.

Recognizing that value creation in corporate management involves not only shareholders but also employees, business partners, customers, creditors, and local communities, Mizuno is committed to appropriate collaboration with a diverse range of stakeholders.

In March 2024, we established the Multi-Stakeholder Policy, based on the belief that appropriate distribution of profits and outcomes generated through value creation and productivity improvements is essential for maintaining wage increase momentum and supporting sustainable economic growth. This includes fair returns to employees and consideration for business partners.

[For more information about the Multi-Stakeholder Policy, please refer to this document.](#) 

Anti-Corruption Initiatives

Mizuno is working to expand its B-to-B and global business operations. However, as such activities may be accompanied by risks of corruption, many countries have strengthened their enforcement against corrupt practices, and global companies are increasingly required to respond accordingly. As a result, we must remain vigilant about corruption risks in our business activities, including bribery of public officials.

In response, Mizuno established and enacted the Anti-Bribery Rules in January 2020, applicable to all Mizuno Group companies both in Japan and overseas. We provided face-to-face briefings to managers of overseas offices and informed domestic employees of the new rules through internal training videos. Additionally, we conduct annual compliance training for all employees in Japan, which includes anti-corruption education.

[Please click here for details of compliance education.](#)

Enhancement of Compliance Across the Global Mizuno Group

As Mizuno aims for further global growth, strengthening compliance across the entire Group on a global scale has become a key challenge. We have identified the following risks as compliance risks that could significantly impact our overseas business continuity and performance, and we are taking proactive measures to address them.

In fiscal year 2024, there were no cases of legal action related to bribery within the Mizuno Group.

■ Major Potential Risks in Overseas Business

- Risk of fraud and misconduct by employees, related parties of overseas subsidiaries and agents, and overseas business travelers
- Risk of information leakage due to inadequate IT management and information security at overseas subsidiaries (especially risks related to compliance with the EU General Data Protection Regulation (GDPR) in Europe)
- Need for consideration of diversity and human rights (e.g., religion, race) in global product development

■ Major Risk Countermeasures

In fiscal year 2024, we conducted a unified and comprehensive questionnaire survey to inventory risks, targeting all domestic and overseas bases, including business establishments, operating facilities, and retail stores in Japan. This initiative was part of our efforts to strengthen risk management on a global scale. No significant risks were identified through the survey.

From fiscal year 2025 onward, we plan to continue this initiative while considering refinements to the survey methodology to enhance its effectiveness as needed.

■ Tax Compliance Initiatives

The Mizuno Group complies with the tax laws of each country where its group companies operate, ensuring proper tax filings and payments. We have established a tax governance framework and work closely with group companies to ensure appropriate tax practices. While we actively utilize preferential tax systems that align with our business objectives, we do not engage in tax planning intended for tax avoidance.

To enhance tax compliance awareness across the Group, we consult with tax authorities when necessary and incorporate the insights of external advisors and auditors. We maintain a sincere and cooperative approach with tax authorities in each country, fostering and maintaining sound relationships built on trust.

When a tax audit is requested, we respond promptly and appropriately to any issues raised. In cases where disputes arise with tax authorities regarding our tax decisions, we carefully examine the points raised and seek corrections as necessary to resolve the matter.

Future Challenges

As transactions with a wider range of business partners increase, the importance of preserving and managing information and evidence for addressing unforeseen legal risks and dispute resolution is growing. In response, we plan to implement the following measures:

- Provide training to enhance employees' basic legal response capabilities
- Offer education and establish systems for contract management and evidence preservation
- Develop information systems and introduce forensic technologies

In addition, based on our policy of strengthening governance in support of global efforts toward a sustainable society, we will implement the following initiatives:

- Expand the application of the whistle-blowing system to overseas offices
- Review the CSR procurement management system
- Reevaluate global legal reporting lines and information management systems

Protection of intellectual property

Basic Concepts

Section “6. Intellectual property” of the Mizuno Corporation Ethical Standards stipulates that “1) Implementing thorough measures for protecting intellectual property created by the company” and “2) Respecting all third party intellectual property and not infringing on the intellectual property rights of others.” For our own intellectual property, we actively acquire and use intellectual property rights, including patents, utility models, designs, and trademarks, in Japan and overseas. We also strive to detect counterfeit products to ensure our brand value and user safety. For the intellectual property of others, we have established guidelines and various screening systems to prevent infringement on their intellectual property rights.

Protection of our own intellectual property

■ Encouragement of intellectual property acquisition

Mizuno, through its technological and design developments, strives to secure the technical superiority of its products by protecting the results with patents and designs. We also endeavor to strengthen our product brand by protecting the naming of goods and services with trademarks. To ensure such protection of intellectual property, we provide intellectual property education to employees involved in intellectual property, heightening their awareness towards the acquisition of rights.

Furthermore, we operate an invention incentive system, granting appropriate rewards to employees who have created patents, utility models, and designs. This promotes the active acquisition of patents and other rights, cultivating an environment where original product development continues. For fiscal year 2024, the implementation award recognized 9 patents, and the registration award was presented to 30 patents and 7 designs.

■ Detection of Counterfeit Products

The sale of inferior counterfeit Mizuno products not only leads to the loss of the company’s social credibility but also significantly impacts user safety, potentially causing accidents.

We have requested a crackdown on counterfeit products at customs, and in the countries where such products are sold, we collect information in cooperation with our subsidiaries at each overseas base and conduct investigations and crackdowns as needed. Recently, in response to changes in commercial transactions, including an increase in internet sales, we have continued to monitor the sales status of counterfeit products on major global e-commerce and social networking sites and take measures, including requiring the suspension of listings of counterfeit products. In fiscal year 2024, we requested the removal of 1,868 counterfeit listings, resulting in nearly 100% of these listings being taken down.

Respect for the intellectual property of others

■ System for respecting the intellectual property of others

We conduct business activities that utilize a variety of intellectual properties, including brands, designs, patents, and portraits of famous athletes. In order not to use the intellectual property of others without permission at any stage, from development to sales, we established the Guidelines on Intellectual Properties Managed by Mizuno (Intellectual Property Guidelines) in August 2008 and posted the Mizuno Design Order Guidelines on our website in 2016. Through this, we ensure that the importance of intellectual property rights is understood by employees. We also ask our business partners to understand their importance and comply with intellectual property rights rules.

For advertising materials as well as products, we have established a system for conducting a preliminary check on compliance with various rights, including portrait rights and trademark rights, and with the Act against Unjustifiable Premiums and Misleading Presentations and other laws and regulations so that we will not commit any violations. We have established and operate a system in which all advertising materials, including magazine advertisements, web advertisements, and storefront posters, should be approved on the database by the evaluation and judgment division before being released to the public.

As we venture into new product fields, we exercise increased caution regarding others’ technical rights. We conduct checks during the design review stage of planning and development to avoid any infringements. In fiscal year 2024, there were no instances of violation regarding marketing communication regulations or voluntary standards.

[Mizuno Design Order Guidelines](#)

Future Challenges

- We will continue to raise awareness and promote shared values regarding intellectual property by helping all employees better understand the connection between our intellectual property and business activities. We believe this will lead to more effective protection of our intellectual property assets.
- We will expand the scope of monitoring counterfeit product sales on e-commerce platforms, particularly in Southeast Asian countries where our brand exposure is increasing strategically. Based on our findings, we will take appropriate actions such as requesting shipment suspensions.

Protection of personal information

Basic Concepts

Mizuno positions its information security management policy (security policy) as a key management issue. We have established fundamental policies and measures concerning overall information security, and we continuously manage and operate them.

In particular, recognizing the critical importance of protecting personal information, we have established personal information protection regulations to ensure strict management and prevent any leakage outside the company. The officer in charge of Human Resources and General Affairs oversees personal information management and implements appropriate measures, including training for personnel handling personal information, enforcing safety protocols, and maintaining an up-to-date inventory of personal data.

Initiative	Implementation Period	Target Audience
Operation and management of the personal information management system “Personal Information Storage”	Year-round	Personnel handling personal information
Training on targeted email attack countermeasures	September	Employees with personal email accounts at Mizuno and its domestic subsidia
Personal information protection education	December	Employees of Mizuno and its domestic subsidiaries
Inventory of personal information	December to January	Personnel handling personal information

Personal Information Protection System

Mizuno handles a significant amount of personal and sensitive information through activities such as hosting sports events, operating sports facilities, and conducting experiments in the R&D department. To prevent serious incidents, we are committed to building robust systems for managing and protecting such information.

For example, in the R&D department, the Ethics Review Committee—comprising lawyers, members of the Global Human Resources and General Affairs Department, and the Legal Department—regularly discusses rules for handling personal and sensitive information of research subjects and confirms that there are no legal issues.

In June 2023, we revised our internal regulations concerning the handling of personal numbers, such as My Number and specific personal information, to strengthen protection measures.

Furthermore, in fiscal year 2024, there were no significant violations within the Mizuno Group related to customer privacy breaches or loss of customer data.

Structure

Future Challenges

Amid growing global regulations and heightened awareness regarding the use of information assets, including personal information, the Mizuno Group is working to refine its information strategy to better respond to change and to reconstruct more appropriate methods for utilizing information. Specific initiatives include:

- Introducing highly secure cloud services to prevent unauthorized access
- Implementing more advanced security measures across the global group
- Establishing systems to proactively prevent security risks in both internal and external systems, and to enable immediate response in the event of an incident
- Developing mechanisms to ensure compliance with the laws and regulations of each country as our global business expands

Environment

Energy consumption [*b]

		Unit	FY2018 (Base Year)	FY2022	FY2023	FY2024
Scope1	City gas	1,000m ³	0.7	1.2	0.2	0.2
	LP gas	t	1.6	1.5	1.2	1.4
	Heavy oil	kl	2.4	2.2	2.5	2.5
	Kerosene	kl	1.0	0.9	1.1	1.2
	Gasoline	kl	19.6	16.4	15.9	15.0
	Light oil	kl	4.2	3.3	3.5	3.4
	Electricity	1,000kWh	10,365	9,461	9,600	9,381
Scope2	Heat	GJ	10,025	11,989	12,142	12,741

* The breakdown of energy consumption includes non-renewable sources such as fuel, electricity, heating, cooling, and steam. Currently, no renewable energy sources such as biofuels have been identified.

* The energy consumption figures do not include energy consumption outside the organization.

* The calculations are based on coefficients from the LCI database IDEA version 3.4.

* Some of the actual figures for FY2023 have been retrospectively revised due to updates in certain data.

Energy-derived GHG emissions [*a]

Unit	FY2018 (Base Year)	FY2022	FY2023	FY2024
t-CO ₂ e	15,071	11,230	11,209	10,957
Emission intensity	8.46	5.30	4.88	4.58

* The figures are calculated using the market-based method, applying emission factors for electric power facilities provided by the Ministry of the Environment.

* Some of the actual figures for previous fiscal years have been retrospectively revised due to updates in certain data.

* For FY2024, some sites have used FY2023 figures due to data availability.

Energy-derived GHG emissions by country [*a]

● location-based method

(Unit: t-CO ₂ e)	FY2018 (Base Year)	FY2022	FY2023	FY2024
Japan	9,815	8,309	8,284	8,151
US	2,728	1,815	1,167	1,400
Canada	228	163	162	143
UK	575	360	288	245
France	153	77	112	135

Category 12 (End-of-life treatment of sold products)	51,001	10.6	42,852	9.8	40,123	9.8	43,375	9.9
Total	479,724	100.0	437,537	100.0	411,041	100.0	437,448	100.0
Comparison to Base Year (%)			91.2		85.7		91.2	

Notes:

* Emissions from purchased electricity in Japan are calculated using the market-based method.

* The calculation scope is the domestic Mizuno Group and overseas Mizuno Group.

* Scope 1: Greenhouse gas (GHG) emissions from a company's direct operations, such as the in-house use of fuel.

* Scope 2: A company's indirect GHG emissions from purchased electricity, heat, and steam.

* Scope 3: A company's indirect GHG emissions coming from product manufacturing, transportation, employees' business travel and commuting within the supply chain.

* For Scope 1 and 2, emissions are from energy sources.

For Scope 3, non-energy source greenhouse gases are partly included according to the guidelines from the Ministry of the Environment.

* The data marked with ☒ has been assured by a third party in Japanese version of report.

* Scope 1 and 2:

Direct and indirect GHG emissions from corporate activities as defined by the GHG Protocol.

* Scope 3 / Category 1:

The following three methods are used to calculate emission factors according to the characteristics of product categories.

* LCA of the representative model of the product sold by Mizuno in the relevant fiscal year was carried out and the emission factor of the product was calculated. GHG emissions were calculated by multiplying the sales volume with the emission factor. - ①

* In the manufacturing department, GHG emissions were calculated by multiplying the amount of substances used in manufacturing with the emission factor. - ②

* GHG emissions were calculated by multiplying the cost of products sold by Mizuno in the relevant fiscal year with the emission factor specified by the Ministry of the Environment. - ③

Total GHG emissions = ① + ② + ③

* For LCA calculation, the emission factor of LCI database IDEA version3.4 and Database on Emissions Unit Values for Accounting of Greenhouse Gas Emissions, etc., by Organizations Throughout the Supply Chain.

* Scope3 / Category 12

The following three methods are used for calculation according to the characteristics of product categories.

* LCA of the representative model of the product sold by Mizuno in the relevant fiscal year was carried out and the emission factor of the product for disposal specified by the Ministry of the Environment was calculated. GHG emissions were calculated by multiplying the sales volume with the emission factor. - ①

* In the manufacturing department, GHG emissions were calculated by multiplying the amount of substances used in manufacturing with the emission factor for disposal. - ②

* GHG emissions estimated from sales amount based on the GHG emissions calculated from ①. - ③

Total GHG emissions = ① + ② + ③

* For LCA calculation, the emission factor of LCI database IDEA version 3.4 and Database on Emissions Unit Values for Accounting of Greenhouse Gas Emissions, etc., by Organizations Throughout the Supply Chain.

* LCA calculations use emission factors from the LCI database IDEA version 3.4 and the emission intensity database for calculating GHG emissions across the supply chain (ver. 3.4).

Past GHG emission figures have been retrospectively revised due to updates in calculation methods based on the GHG Protocol.

Water intake by water source[*b]

● domestic group

	Unit	FY2020	FY2021	FY2022	FY2023	FY2024
Water pipe and water supply facility	1,000m ³	28.5	32.1	32.9	30.3	30.1
Groundwater	1,000m ³	7.5	6.4	9.8	6.6	7.5

* Calculations are based on data gathered from domestic manufacturing bases (including the Senoh Group)

Environmental Accounting

● Environmental Conservation Costs

In fiscal year 2024, environmental conservation costs included an investment of 30.62 million yen, a decrease of approximately 6.3 million yen from the previous year, and expenses totaling 222.79 million yen, an increase of approximately 53 million yen from the previous year.

Major expenses consisted of personnel costs related to research on products and technologies that contribute to environmental conservation, costs associated with resource circulation such as recycling and proper treatment/disposal of waste, and expenses for the operation and management of EMS (Environmental Management System) activities.

● Environmental protection costs incurred in FY 2024 [*b]

Categories of environmental protection costs	Key initiatives	Performance in FY 2024	
		Amount invested	Expenses
(1)Business area costs		2,983	10,216
(1)-1 Pollution prevention costs	Inspection, examination, and analysis costs	45	828
(1)-2 World environment protection costs	Costs incurred for installing energy-saving equipment	2,938	1,871
(1)-3 Costs incurred for installing energy-saving equipment	Recycling waste and using recycled material	0	7,516
(2)Upstream and downstream costs	Costs for outsourcing product recycling and green procurement costs	0	1,324
(3)Management activity costs	ISO 14001 management costs, external communication costs, and environmental advertising costs	79	2,757
(4)Research and development costs	Costs for conducting research into the development of environmentally friendly products	0	7,724
(5)Social activity costs	Costs incurred for cleaning up the streets surrounding offices and donating money to the Dongurinokai association	0	257
(6)Environmental remediation costs		0	0
(7)Other environmental protection costs		0	0
Total		3,062	22,279

Effectiveness of environmental protection measures

● Effectiveness of environmental protection measures taken in FY 2024 [*b]

■ Reduction (physical effect)

Environmental aspects		Unit	Performance in FY 2023	Performance in FY 2024	Reduction	Compared to the previous year
Energy and resource conservation	Electricity	1.000kWh	9,564	9,296	268	97.2%
	City gas	1.000m³	70	81	-10	114.3%
	Gasoline and diesel fuel	kl	671	648	23	96.6%
	Kerosene	kl	39	43	-5	112%
	Heavy oil	kl	99	99	0.1	99.6%
	Water supply	m³	30	30	0.1	99.6%
Amount of incinerated general waste		t	43	43	-4	110.6%
Industrial waste emissions		t	481	430	24	94.8%

* Aggregation period: April 2024 to March 2025

■ Reduction (monetary effect)

Unit (ten thousand yen)

Environmental aspects	Performance in FY 2023	Performance in FY 2024	Reduction	Compared to the previous
Electricity, gas, gasoline, light oil, kerosene, heavy oil, and water supply bills	47,472	49,729	-2,257	104.8%

* Aggregation period: April 2024 to March 2025

Social

Breakdown of Tier 1 suppliers

		Number of suppliers	Supplier ratio(%)	Procurement amount ratio(%)
Total Suppliers		441	100.0	100.0
By category	Apparel	246	55.8	30.3

External Recognition

Evaluation of activities relating to ESG / SDGs

Mizuno concluded a loan contract with Sumitomo Mitsui Banking Corporation after being evaluated positively regarding its ESG activity, information disclosure, and business aimed at helping achieve the UN's SDGs based on Sumitomo Mitsui Banking Corporation's Positive Impact Finance-Based, Principle Compliance-type ESG/SDGs Syndicated Loan Program. The Positive Impact Finance-Based, Principle Compliance-type ESG/SDGs Syndicated Loan Program does not only evaluate companies based on Sumitomo Mitsui Banking Corporation's own evaluation standards for evaluating ESG/SDGs but also complies with the principles for positive impact finance of DNV BUSINESS ASSURANCE JAPAN K.K., which is an independent third-party body. The principles for positive impact finance aim to promote the idea of increasing the positive impact that finance can have on the world while decreasing its negative impact, and they were developed by the United Nations Environment Program - Finance Initiative (UNEP FI) in January 2017.

Conformity letter issued by DNV

Evaluation of Health Promotion Initiatives

Mizuno's efforts to promote health have been recognized through multiple certifications. In 2025, the company was certified as a "Health & Productivity Management Outstanding Organization (Large Enterprise Category)"—commonly known as the White 500—and also received the "Silver" designation as a consecutive awardee of the "Sports Yell Company 2025."

Evaluation of Diversity Initiatives

Mizuno has received several certifications in recognition of its efforts to promote diversity:

- On May 13, 2024, Mizuno was awarded the "Eruboshi Certification", which is granted to companies that demonstrate excellence in promoting women's participation and advancement in the workplace under the Act on Promotion of Women's Participation and Advancement in the Workplace. Mizuno received the highest level—three stars—out of the three certification levels.
- On May 16, 2024, Mizuno obtained the "Kurumin Certification", which is awarded to companies that meet certain standards for supporting employees in balancing work and child-rearing, based on the Act on Advancement of Measures to Support Raising Next-Generation Children.
- In July 2025, Mizuno received the "Tomonin" mark, a symbol designated by the Ministry of Health, Labour and Welfare to recognize companies that are actively working to create a workplace environment where employees can balance work and caregiving responsibilities.

Reporting Policy

Reporting Policy

Mizuno maintains transparency on information regarding the Mizuno Group’s environmental and social impact and explains the Mizuno Group’s sustainability activities to stakeholders through the Sustainability Report.

Reporting Scope of Organization

In principle, the Mizuno Group (Mizuno Headquarters and domestic/overseas group companies) is our target. But as the target organization differs according to data and descriptions of entry contents, the report target organization is indicated by the letters below in each part of the report.

Symbol	Scope of Coverage
[*a]	Mizuno Group (Domestic / Overseas)
[*b]	Mizuno Group (Domestic)
[*c]	Mizuno Group, Domestic (Excluding the Senoh Group and Sharp Sangyo Co., Ltd.)
[*d]	Mizuno Corporation (Non-consolidated)
[*e]	Others: Described individually

For the countries in which we operate, please visit at “Global Office Locator”

External Assurance

As of June 2025, Mizuno had not obtained external assurance on the contents of the Sustainability Report. However, it will consider it in the future.

In order to ensure a higher level of transparency and reliability while disclosing information on environmental data, Mizuno has obtained third-party assurance for the Japanese version of environmental data for FY2024 with this report from SGS Japan Inc.
